CPR/AED for the Professional Rescuer

Historically in warfare, the majority of all combat deaths have occurred prior to a casualty ever receiving advanced trauma management. The execution of the Ranger mission profile in the Global War on Terrorism and our legacy tasks undoubtedly will increase the number of lethal wounds. Ranger leaders can significantly reduce the number of Rangers who die of wounds sustained in combat by simply targeting optimal medical capability in close proximity to the point of wounding. Directing casualty response management and evacuation is a Ranger leader task, ensuring technical medical competence is a Ranger Medic task. A solid foundation has been built for Ranger leaders and medics to be successful in managing casualties in a combat environment. The true success of the Ranger Medical Team will be defined by its ability to complete the mission and greatly reduce preventable combat death. Rangers value honor and reputation more than their lives, and as such will attempt to lay down their own lives in defense of their comrades. The Ranger Medic will do no less.

EMT-basic Exam

The definitive treatment on the medical evaluation and management of injured patients in both peace- and wartime. Edited by eminent experts in the field, this text brings together medical specialists from all four branches of the armed services. It discusses the history of aeromedical evacuation, triage and staging of the injured patient, evacuation from site of injury to medical facility, air-frame capabilities, medical capabilities in-flight, response to in-flight emergencies, and mass emergency evacuation. Specific medical conditions are addressed in detail, including such general surgical casualties as abdominal wounds and soft tissue, vascular, maxillofacial, head and spinal cord injuries, ophthalmologic, orthopaedic, pediatric, obstetric-gynecologic casualties, burns, and more. Over 80 illustrations provide a review of transport equipment and both medical and surgical treatment. A must-have reference for all armed forced physicians and flight surgeons, for general and trauma surgeons, internists, intensive care specialists, orthopaedic surgeons, and public health service physicians.

This New American Red Cross CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to many of the CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional rescuers use are increasing, this training will help you meet your most important responsibility as a professional rescuer: the responsibility to save lives.

This 2004 Emergency War Surgery, 3rd United States Revision is written for the combat physician operating away from sophisticated medical support. This edition contains new material that updates the management of war wounds and is filled with over 150 specially drawn illustrations. Equally important is the use of an outline, bulleted format that is more concise than previous editions. The intent is that if given a choice of bringing a SINGLE book on a rapid or prolonged deployment, today's military surgeon would choose this edition over any other trauma book.

Have you ever wanted to calculate the predicted peak flow for one of your asthmatic patients without spending valuable minutes searching for that confounded little slide rule gizmo? Wouldn't it be great if you could somehow remember all Mrs. Jones' medications when the nursing home calls to see if it's OK to treat her acutely elevated blood pressure with some atenolol? Handheld computers are emerging as the stethoscopes of the twenty-first century, and no clinician should be without this essential tool. These small, easy-to-use devices are now powerful enough to help clinicians manage information and make medical decisions at the point of care. This comprehensive how-to guide targets all levels of handheld computer users, from novices to experts, and demonstrates how to make the most of handheld computers in any medical practice. Designed with easy-to-understand, hands-on exercises for each new skill presented, this book begins with choosing a handheld and "getting to know" your new device. It then progresses through downloading and installing software, using charge capture and e-prescription programs, Internet and evidence-based resources for your device, designing and programming your own programs, and going wireless. Written by three experienced family medicine clinicians, Handhelds in Medicine is designed to improve every day practice for any busy health professional. There are chapters written for and by nearly every health professional, including nurses, physician assistants and speech pathologists.
