St Martin of Tours is one of Christianity's major saints and his significance reaches far beyond the powerful radiance of his iconic act of charity. While the saint and his cult have been researched comprehensively in Germany and France, his cult in the British Isles proves to be fairly unexplored. Andre Mertens closes this gap for Anglo-Saxon England by editing all the age's surviving texts on the saint, including a commentary and translations. Moreover, Mertens looks beyond the horizon of the surviving body of literary relics and dedicates an introductory study to an analysis of the saint's cult in Anglo-Saxon England and his significance for Anglo-Saxon culture. Anthropomorphism, Microcosmism and Analogy in Early Modern Thought and Visual Arts

The Status of the Translation Profession in the European Union

*An exploration of the way in which early Christians engaged with the Roman intellectual elite and its highly sophisticated Graeco-Roman tradition. Roger Green examines the works of Juvencus, Sedulius, and Arator, and shows how they repackaged the New Testament as epic, to try to make a bridge between two very different cultures.*

*Get hands-on guidance designed to help you put the newest .NET Framework component- Windows Identity Foundation, the identity and access logic for all on-premises and cloud development- to work.*

*Gender was a key social indicator in Byzantine society, as in many others. While studies of gender in the western medieval period have appeared regularly in the past decade, similar studies of Byzantium have lagged behind. Masculine and feminine roles were not always as clearly defined as in the West, while eunuchs made up a 'third gender' in the imperial court. Social status indicators were also in a state of flux, as much linked to patronage networks as to wealth, as the Empire came under a series of external and internal pressures. This fluidity applied equally in ecclesiastical and secular spheres. The present collection of essays uncovers gender roles in the imperial family, in monastic institutions of both genders, in the Orthodox church, and in the nascent cult of Mary in the east. It puts the spotlight on flashpoints over a millennium of Byzantine rule, from Constantine the Great to Irene and the Palaiologoi, and covers a wide geographical range, from Byzantine Italy to Syria. The introduction frames the following nine chapters against recent scholarship and considers methodological issues in the study of gender and Byzantine society. Together these essays portray a surprising range of male and female experience in various Byzantine social institutions - whether religious, military, or imperial -- over the course of more than a millennium. The collection offers a provocative contrast to recent studies based on western medieval scholarship. Common themes that bind the collection into a coherent whole include specifically Byzantine expectations of gender among the social elite; the fluidity of social and sexual identities for Byzantine men and women within the church; and the specific challenges that strong individuals posed to the traditional limitations of gender within a hierarchical society dominated by Christian orthodoxy.*

*This volume explores the themes of authorship and authenticity – and connected issues – from the Classical Antiquity to the Renaissance. Its reflection is constructed within a threefold framework. A first section includes topics dealing with dubious or uncertain attribution of ancient works, homonymous writers, and problems regarding the reliability of compilation literature. The middle section goes through several issues concerning authorship: the balance between the author's contribution to their own work and the role of collaborators, pupils, circles, reviewers, scribes, and even older sources, but also the influence of different compositional stages on the concept of 'author', and the challenges presented by anonymous texts. Finally, a third crucial section on authenticity and forgeries concludes the book: it contains contributions dealing with spurious works – or sections of works – , mechanisms of interpolation, misattribution, and deliberate forgery. The aim of the book is therefore to exemplify the many nuances of the complex problems of authenticity and authorship of ancient texts.*

Galileo Galilei ' s Sidereus Nuncius is arguably the most dramatic scientific book ever published. It announced new and unexpected phenomena in the heavens, " unheard of through the ages, " revealed by a mysterious new instrument. Galileo had ingeniously improved the rudimentary " spyglasses " that appeared in Europe in 1608, and in the autumn of 1609 he pointed his new instrument at the sky, revealing astonishing sights: mountains on the moon, fixed stars invisible to the naked eye, individual stars in the Milky Way, and four moons around the planet Jupiter. These discoveries changed the terms of the debate between geocentric and heliocentric cosmology and helped ensure the eventual acceptance of the Copernican planetary system. Albert Van Helden ' s beautifully rendered and eminently readable translation is based on the Venice 1610 edition ' s original Latin text. An introduction, conclusion, and copious notes place the book in its historical and intellectual context, and a new preface, written by Van Helden, highlights recent discoveries in the field, including the detection of a forged copy of Sidereus Nuncius, and new understandings about the political complexities of Galileo ' s work.

This book offers the hint for a new reflection on ancient textual transmission and editorial practices in Antiquity. In the first section, it retraces the first steps of the process of ancient writing and editing. The reader will discover how the book is both a material object and a metaphorical personification, material or immaterial. The second section will focus on corpora of Greek texts, their formation, and their paratextual apparatus. Readers will explore various issues dealing with the mechanisms that are at the basis of the assembling of ancient Greek texts, but great attention will also be given to the role of ancient scholarly work. The third section shows how texts have two levels of authorship: the author of the text, and the scribe who copies the text. The scribe is not a medium, but plays a crucial role in changing the text. This section will focus on the protagonists of some interesting cases of textual transmission, but also on the books they manufactured or kept in the libraries, and on the words they engraved on stones. Therefore, the fresh voices of the contributors of this book, offer new perspectives on established research fields dealing with textual criticism.

Codex Bezae is one of the most important primary sources in New Testament scholarship. Together with Codex Alexandrinus and Codex Vaticanus it represents one of our most significant links back to the early Church and its origins. Since its rediscovery in the sixteenth century, the riddles posed by its general appearance and its textual characteristics have continued to fascinate scholars, and David Parker here offers a comprehensive study of Codex Bezae. This book aims to cast light on the story behind this most enigmatic of manuscripts. Data are presented here that makes possible a reconstruction of the stages of copying from which the manuscript descends. An appraisal of the earliest correctors of the Codex enables the author to extend his picture of its history to the medieval period.

This book contains over fifty passages of Latin from 200 BC to AD 900, each with translation and linguistic commentary. It is not intended as an elementary reader (though suitable for university courses), but as an illustrative history of Latin covering more than a millennium, with almost every century represented. Conventional histories cite constructions out of context, whereas this work gives a sense of the period, genre, stylistic aims and idiosyncrasies of specific passages. 'Informal' texts, particularly if they portray talk, reflect linguistic variety and change better than texts adhering to classicising norms. Some of the texts are recent discoveries or little known.

Writing tablets are well represented, as are literary and technical texts down to the early medieval period, when striking changes appear. The commentaries identify innovations, discontinuities and phenomena of long duration.

Readers will learn much about the diversity and development of Latin.

Latin Epics of the New Testament

**This book looks at how differences among women have been textually represented at a variety of historical moments and in a variety of cultural contexts, including Victorian mainstream fiction, African-American mulatto novels, late twentieth-century lesbian communities, and contemporary country music. Sororophobia designates the complex and shifting relations between women's attempts to identify with other women and their often simultaneous desire to establish and retain difference. Michie argues for the centrality to feminism of a paradigm that moves beyond celebrations of identity and sisterhood to a more nuanced notion of women's relations with other women which may include such uncomfortable concepts as envy, jealousy, and competition as well as**

more institutionalized ideas of difference such as race and class. Chapters on literature are interspersed by "inter-chapters" on the choreography of sameness and difference among women in popular culture.

During the "golden age of law firm growth" from the late 1960s until 2007, most large law firms adopted a default growth strategy, increasing practice areas and offices, aided by the momentum of the tail winds of law firm growth. Since the recession of 2008-2009, however, the legal marketplace has drastically changed. In this timely book, Jay Westcott suggests strategic building blocks that firms can adopt in order to adapt themselves to this radical change and prosper as lasting institutions.

Cursor Mundi is a publication series of inter- and multi-disciplinary studies of the medieval and early modern world, viewed broadly as the period between late antiquity and the Enlightenment. Like its companion, the journal Viator, Cursor Mundi brings together outstanding work by medieval and early modern scholars from a wide range of disciplines, emphasizing studies which focus on processes such as cultural exchange or the course of an idea through the centuries, and including investigations beyond the traditional boundaries of Europe and the Mediterranean.

A Washington Post Bestseller Not all collaboration is smart. Make sure you do it right. Professional service firms face a serious challenge. Their clients increasingly need them to solve complex problems—everything from regulatory compliance to cybersecurity, the kinds of problems that only teams of multidisciplinary experts can tackle. Yet most firms have carved up their highly specialized, professional experts into narrowly defined practice areas, and collaborating across these silos is often messy, risky, and expensive. Unless you know why you're collaborating and how to do it effectively, it may not be smart at all. That's especially true for partners who have built their reputations and client rosters independently, not by working with peers. In Smart Collaboration, Heidi K. Gardner shows that firms earn higher margins, inspire greater client loyalty, attract and retain the best talent, and gain a competitive edge when specialists collaborate across functional boundaries. Gardner, a former McKinsey consultant and Harvard Business School professor now lecturing at Harvard Law School, has spent over a decade conducting in-depth studies of numerous global professional service firms. Her research with clients and the empirical results of her studies demonstrate clearly and convincingly that collaboration pays, for both professionals and their firms. But Gardner also offers powerful prescriptions for how leaders can foster collaboration, move to higher-margin work, increase client satisfaction, improve lateral hiring, decrease enterprise risk, engage workers to contribute their utmost, break down silos, and boost their bottom line. With case studies and real-world insights, Smart Collaboration delivers an authoritative case for the value of collaboration to today's professionals, their firms, and their clients and shows you exactly how to achieve it.

Anthropomorphism closely relates to early modern notions of analogy and microcosm. Exploring the tension inherent in such notions, the essays in this volume address the contradictions and tensions, between magical and rational, speculative and practical thought, that anthropomorphism entails.

In his work the late Georges Dumézil, arguably the most important modern mythologist, demonstrated that every Indo-European religious and social system was structured according to three primary functions: sovereignty, war, and fertility.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt
