**Well, it has been nearly two years and covid is still here. On top of the virus, many of us are struggling with our mental health. Especially the adolescents. So, to help them, in all mental states, my team and I created this picture book. It is a funny picture book that deals with mental health situations caused by the covid pandemic. The main focus of the book is that we can overcome covid. How can we do this? You ask. We can do this by helping our neighbors. Each and every person in the world doing their part. Thank you all so much!! hope that you find this book encouraging!**

**One of the most revealing things about national character is the way that citizens react to and report on their travels abroad. Oftentimes a tourist’s experience with a foreign place says as much about their country of origin as it does about their destination. A Happy Holiday examines the travels of English-speaking Canadian men and women to Britain and Europe during the late nineteenth and early twentieth centuries. It describes the experiences of tourists, detailing where they went and their reactions to tourist sites, and draws attention to the centrality of culture and the sensory dimensions of overseas tourism. Among the specific topics explored are travellers’ class relationships with people in the tourism industry, impressions of historic landscapes in Britain and Europe, descriptions of imperial spectacles and cultural sights, the use of public spaces, and encounters with fellow tourists and how such encounters either solidified or unsettled national subjectivities. Cecilia Morgan draws our attention to the important ambiguities between empire and nation, and how this relationship was dealt with by tourists in foreign lands. Based on personal letters, diaries, newspapers, and periodicals from across Canada, A Happy Holiday argues that overseas tourism offered people the chance to explore questions of identity during this period, a time in which issues such as gender, nation, and empire were the subject of much public debate and discussion.**

*In the 1950s, the design and implementation of the Toyota Production System (TPS) within Toyota had begun. In the 1960s, Group Technology (GT) and Cellular Manufacturing (CM) were used by Serck Audco Valves, a high-mix low-volume (HMLV) manufacturer in the United Kingdom, to guide enterprise-wide transformation. In 1996, the publication of the book Lean Thinking introduced the entire world to Lean. Job Shop Lean integrates Lean with GT and CM by using the five Principles of Lean to guide its implementation: (1) identify value, (2) map the value stream, (3) create flow, (4) establish pull, and (5) seek perfection. Unfortunately, the tools typically used to implement the Principles of Lean are incapable of solving the three Industrial Engineering problems that HMLV manufacturers face when implementing Lean: (1) Finding the product families in a product mix with hundreds of different products, (2)*

*designing a flexible factory layout that “fits” hundreds of different product routings, and (3) scheduling a multi-product multi-machine production system subject to finite capacity constraints. Based on the Author’s 20+ years of learning, teaching, researching, and implementing Job Shop Lean since 1999, this book Describes the concepts, tools, software, implementation methodology, and barriers to successful implementation of Lean in HMLV production systems*

*Utilizes Production Flow Analysis instead of Value Stream Mapping to eliminate waste in different levels of any HMLV manufacturing enterprise Solves the three Industrial Engineering problems that were mentioned earlier using software like PFAST (Production Flow Analysis and Simplification Toolkit), Speiri and Schryfizer Explains how the one-at-a-time implementation of manufacturing cells constitutes a long-term strategy for Continuous Improvement*

*Explains how product families and manufacturing cells are the basis for implementing flexible automation, machine monitoring, virtual cells, Manufacturing Execution Systems, and other elements of Industry 4.0 Teaches a new method, Value Network Mapping, to visualize large multi-product multi-machine production systems whose Value Streams share many processes Includes real success stories of Job Shop Lean implementation in a variety of production systems such as a forge shop, a machine shop, a fabrication facility and a shipping department Encourages any HMLV manufacturer planning to implement Job Shop Lean to leverage the co-curricular and extracurricular programs of an Industrial Engineering department*

In recent years, a considerable amount of effort has been devoted, both in industry and academia, to improving maintenance. Time is a critical factor in maintenance, and efforts are placed to monitor, analyze, and visualize machine or asset data in order to anticipate to any possible failure, prevent damage, and save costs. The MANTIS Book aims to highlight the underpinning fundamentals of Condition-Based Maintenance related conceptual ideas, an overall idea of preventive maintenance, the economic impact and technical solution. The core content of this book describes the outcome of the Cyber-Physical System based Proactive Collaborative Maintenance project, also known as MANTIS, and funded by EU ECSEL Joint Undertaking under Grant Agreement n° 662189. The ambition has been to support the creation of a maintenance-oriented reference architecture that support the maintenance data lifecycle, to enable the use of novel kinds of maintenance strategies for industrial machinery. The key enabler has been the fine blend of collecting data through Cyber-Physical Systems, and the usage of machine learning techniques and advanced visualization for the enhanced monitoring of the machines. Topics discussed include, in the context of maintenance: Cyber-Physical Systems, Communication Middleware, Machine Learning, Advanced Visualization, Business Models, Future Trends. An important focus of the book is the application of the techniques in real world context, and in fact all the work is driven by the pilots, all of them centered on real machines and factories. This book is suitable for industrial and maintenance managers that want to implement a new strategy for maintenance in their companies. It should give readers a basic idea on the first steps to implementing a maintenance-oriented platform or information system.

An Industrial Engineering Approach to Implementing Lean in High-Mix Low-Volume Production Systems

In August 1942, the Allies launched a raid against the German-held port of Dieppe on the French channel coast. It was largely a disaster, with the Canadian forces bearing the brunt of the catastrophe. However, it wasn't all a failure, and history has tended to overlook the role of 4 Commando, who, along with their US Ranger counter-parts, landed and successfully disabled the German guns threatening the rest of the landings. Their actions proved an excellent demonstration of the military adage “train hard, fight easy” and showed the advantage of proper operational planning and brilliant leadership. This controversial raid also included members of the Free French and it was the first time US land forces engaged the Germans on mainland Europe. Set in the context of the Dieppe raid as a whole, Will Fowler studies the contribution of No. 4 Commando and Operation Cauldron, and evaluates how and why they achieved their objectives in this daring Commando raid of World War II.
