We all know what a great tool Flash is for creating dynamic, engaging web content, and Adobe's CS4 release just makes it even better. Among the newer features is the ability to take all the power of Flash for the Web and put in on the desktop using AIR. AIR capability is built right into the Flash CS4 integrated development environment, which means you can start writing desktop applications right away. This book not only covers the essentials of using Flash with AIR (and AIR with Flash), but also shows you how to extend application functionality in new ways. Once you've got Flash on the desktop, you're no longer constrained by the limitations of running inside a web browser. You'll have access to the local desktop file system, and AIR adds SQLite functionality for native database support. And just as Flash animations have a consistent look and feel across browsers, AIR allows you to create applications that work consistently across operating systems—Mac OS X, Windows, and Linux. For any Flash developer who wants to go from the Web to the desktop (and who doesn't?), this book is required reading. It not only tells you how to do it, but is full of practical, easy-to-follow examples that will have you building desktop AIR applications with Flash in no time. Expanding your existing Flash skills with the Essential Guide to Flash CS4 AIR Development will make you an even more potent and indispensable force on any development team!

Wood as an engineering material can be technically defined"as a hyroscopic, orthotropic, biological, and permeablematerial having extreme chemical diversity and physical complexitywith structures, that vary extensively in their shape, size,properties and function". Therefore, using wood to its bestadvantage and most efficiency in engineering applications, specificcharacteristics or chemical, physical and mechanical propertiesmust be considered. The products are divided into two classes, solid wood and compositewood products. Solid wood includes shipbuilding, bridges, flooring,mine timbers, etc. Composite wood products include insulationboard, plywood, oriented strand board, hardboard and particleboard. In recent years, the machining of wood products has acquired greatimportance due the short supply of wood and increasingenvironmental awareness among users and manufacturers. Theoptimization of the machining process centers around the mechanismof chip formation, tool wear, workpiece surface quality, crackinitiation and propagation of different types of wood. Otherfactors are also humidity, temperature, static preloads, andvibrations that can affect the wood during the machiningprocess. The book provides some fundamentals and recent research advances onmachining wood and wood products.
