If you need to make automated changes to InDesign documents beyond what basic search and replace can handle, you need regular expressions, and a bit of scripting to make them work. This Short Cut explains both how to write regular expressions, so you can find and replace the right things, and how to use them in InDesign specifically.

This Short Cut covers only InDesign CS2. For coverage of InDesign CS3 and CS4, see the version at <http://oreilly.com/catalog/9780596802523/>. InDesign provides a powerful set of tools for producing beautiful documents. While you can certainly do all your work by hand through InDesign's graphical interface, there are many times when it's much easier to write a script. Once you've automated a task, you can run it over the whole document, ensuring consistency, or just when you need it, simplifying and speeding your layout process. All it takes is a bit of JavaScript knowledge and a willingness to explore InDesign's programming features. (This version covers only InDesign CS2. For coverage of InDesign CS3 and CS4, see the version at <http://oreilly.com/catalog/9780596802523/>.)

Updated: August 2010. Author Peter Kahrel updated this Short Cut to cover InDesign CS5. Updated: November 2009. Author Peter Kahrel updated this Short Cut to address typos and reader comments. GREP (short for "General Regular-Expression Print") is a powerful tool that lets you use wildcards ("jokers") to search and replace text. InDesign's GREP implementation can be used for text and also for formatting codes, finding patterns in text as well as literal text. GREP moves beyond the restrictions that hampered earlier InDesign search features, but unfortunately it does have the reputation of being d.
