Unlike previous electronic commerce books which stress theory, the Administrator's Guide to e-Commerce is a hands-on guide to creating and managing websites using the Microsoft BackOffice product suite. This book will explore the role of networking technologies to industry growth, issues of privacy and security, and most importantly, guidance in taking an existing Web server and creating an electronic storefront.

Explore the features, the installation, and the configuration of these seven new servers and gain a conceptual understanding of how your users will be working with them. Forms Server 2007 Groove Server 2007 Communications Server 2007 PerformancePoint Server 2007 Project Portfolio Server 2007 Project Server 2007 SharePoint® Server 2007 for Search Along with the release of Windows Vista and the revamped suite of Office 2007 products, Microsoft has released a line-up of new servers. Exchange Server 2007 and SharePoint® Server 2007 are two of the major players, but there are also seven additional Office 2007 Servers of which you may not be aware that can add productivity to your environment in a variety of ways. Each of the seven servers is unique and requires distinct assessment to determine if your company can benefit from any given server. This book provides you with the knowledge you need to determine the use of each server, the prerequisites and procedures of server installation, the post-installation configuration options so you can set it and forget it, and finally, a look at the client-side applications that interact with the new servers. Detailed information on how to... Install each of the seven Office 2007 Servers, including both standalone and server farm installation. Handle post-installation configuration options for each of the seven Office 2007 Servers. Create InfoPath forms to post to your InfoPath Forms Server. Work with the Groove client once your Groove Servers are in place. Communicate more efficiently within your company using a Communications Server and the new Communicator 2007 client. Handle larger projects through Project Professional 2007 with your new Project Server and Project Portfolio Server. Understand Business Intelligence (BI) in order to manage your company's future through PerformancePoint Server. Improve your ability to search for content through your SharePoint Server for Search. IBM® Rational® Application Developer for WebSphere® Software V7.0 (for short, Rational Application Developer) is the full function Eclipse 3.2 based development platform for developing Java™ 2 Platform Standard Edition (J2SETM) and Java 2 Platform Enterprise Edition (J2EETM) applications with a focus on applications to be deployed to IBM WebSphere Application Server and IBM WebSphere Portal. Rational Application Developer provides integrated development tools for all development roles, including Web developers, Java developers, business analysts, architects, and enterprise programmers. Rational Application Developer is part of the IBM Rational Software Delivery Platform (SDP), which contains products in four life cycle categories: - Architecture management, which includes integrated development environments (Application Developer is here) - Change and release management - Process and portfolio management - Quality management This IBM Redbooks® publication is a programming guide that highlights the features and tooling included with Rational Application Developer V7.0. Many of the chapters provide working examples that demonstrate how to use the tooling to develop applications, as well as achieve the benefits of visual and rapid application development. This publication is an update of Rational Application Developer V6 Programming Guide, SG24-6449. This book consists of six parts: - Introduction to Rational Application Developer - Develop applications - Test and debug applications - Deploy and profile applications - Team development - Appendixes

A Practical Guide to Localization was written for technical translators, localization engineers, testing engineers, desktop publishers, project managers, and anyone else who may be involved in the release of multilingual products. In this second edition, translators can learn more about localizing software, online help and documentation files, and the latest translation technology tools. Localization engineers can learn all about developing, engineering, and testing

multilingual software and online help projects. For project managers, there is all the information needed for planning translation and localization projects, finding resources, and ensuring product quality. New to this second, fully updated and revised edition are chapters on internationalization, multilingual desktop publishing, and software quality assurance. The book has been designed both as a reference work and a teaching tool. Visit the www.locguide.com web site for additions and updates to the book, as well as references and links relevant to technical translation and localization. The web site also contains extracts from the book, reviews, and ordering information. Bert Esselink has been active in localization for over a decade. After graduating in technical translation and taking university classes in programming and computational linguistics he worked for several years as software localizer, localization engineer, and technical project manager at International Software Products. In 1996 he joined ALPNET in Amsterdam as localization manager before taking on the role of globalization manager, developing internal production quality standards. In January 2000 Bert joined Lionbridge to head up their European globalization consulting services.

The Citrix Certified Administrator (CCA) credential is the first tier of Citrix certification. The CCA is most often sought out by IT professionals whose networks employ Citrix virtualization technology, and for those IT professionals who are seeking a broad base of general network expertise. The number of CCAs is estimated at between 65 and 70K, up from 45,000 in 2003. Citrix recently released a new version of its most popular product, XenApp (formerly Presentation Server). This new version is fully compatible with Windows Server 2008. To retain their CCA credential, all current CCAs will need to upgrade to the new software. This will be particularly important to those companies enrolled in Citrix partner programs, as current certification is a requirement of the program. When packaged with practice exams, this prep kit will offer an affordable, effective solution for CCA certification and re-certification. Complete exam-prep package includes full coverage of new XenApp 5.0 objectives Authored by a Citrix expert with hundreds of implementations to his credit This preparation kit can also be used as a reference guide for administrators who need to integrate XenApp 5.0 with their networks

Effectively implement features and components for any computing environment

Key Features

Explore the latest features of VMware Horizon 7.7

Virtualize your desktop infrastructure using new features introduced in Horizon

Implement App Volumes and User Environment Manager in your infrastructure

Book Description

This third edition of *Implementing VMware Horizon 7.7* has been updated to get you up to speed with VMware Horizon 7.7 by showing you how to use its key features and deploying an end-user computing infrastructure for your own organization. The book begins by guiding you on how to deploy all the core requirements for a VMware Horizon infrastructure. It then moves on to show you how to provision and administer end-user computing resources using VMware Horizon. You'll not only be able to deploy the core VMware Horizon features, but you'll also be able to implement new features, such as the Just-in-Time Management Platform (JMP) and the Horizon Console. You'll also focus on the latest features and components of the Horizon platform and learn when and how they are used. By the end of the book, you will have developed a solid understanding of how your organization can benefit from the capabilities VMware Horizon offers and how each of its components is implemented. What you will learn

Work with the different products that make up VMware Horizon

Implement a multi-site VMware Horizon Pod using the Cloud Pod Architecture feature

Deploy and configure VMware Horizon's optional components

Implement and maintain Microsoft RDSH, Horizon Linux, and Windows Desktop Pools and RDSH Application Pools

Configure and manage Horizon remotely using PowerCLI

Learn about the Microsoft Windows Group Policy templates for Horizon

Understand how to manage the SSL certificates for each of the VMware Horizon components

Who this book is for If you're a system administrator, solutions architect, or desktop engineer looking to level up your skills working with VMware's Horizon ecosystem and want to build a successful deployment strategy for desktops and applications, this book is for you.

GroupWise allows corporate users to manage documents, share calendars, and project workflow across network operating systems, including Novell NetWare, Windows NT, and Windows 2000. Changes in version 6.5 include improvements user interface and to integration tools for third-party developers. The software employees to access business information via a Web browser on a desktop or a PC, and from wireless handhelds like Research In Motion's BlackBerry devices.

Approximately 34 million people use GroupWise, with an average of one administrator per 1000 end-users. Novell's GroupWise 6.5 Administrator's Handbook is an authoritative guide for administrators of GroupWise. It helps networking and messaging professions plan and install a GroupWise system, set up multiple post office domain systems, configure messaging and Internet services, migrate from previous versions of GroupWise, and troubleshoot message flow and fix directory problems. Citrix Presentation Server allows remote users to work off a network server as if they weren't remote. That means: Incredibly fast access to data and applications for no third party VPN connection, and no latency issues. All of these features make Citrix Presentation Server a great tool for increasing access and productivity for remote users. Unfortunately, these same features make Citrix just as dangerous to the network it's running on. By definition, Citrix is granting remote users direct access to corporate servers?..achieving this type of access is also the holy grail for malicious hackers. To compromise a server running Citrix Presentation Server, a hacker need not penetrate a heavily defended corporate or government server. They can simply compromise a more vulnerable laptop, remote office, or home office of any computer connected to that server by Citrix Presentation Server. All of this makes Citrix Presentation Server a high-value target for malicious hackers. And although it is a high-value target, Citrix Presentation Servers and remote workstations are often relatively easily hacked because they are often times deployed by overworked system administrators who haven't even configured the most basic security features offered by Citrix. "The problem, in other words, isn't a lack of options for securing Citrix instances; the problem is that administrators aren't using them." (eWeek, October 2007). In support of this assertion Security researcher Petko D. Petkov, aka "pdp", said in an October posting that his recent testing of Citrix gateways led him to "tons" of "wide-open" Citrix instances, including 10 on government domains and four on military domains. The most comprehensive book published for system administrators providing step-by-step instructions for a secure Citrix Presentation Server. * Special chapter by Security researcher Petko D. Petkov'aka "pdp" detailing tactics used by malicious hackers to compromise Citrix Presentation Servers. * Companion Web site contains custom scripts for administrators to install, configure, and troubleshoot Citrix Presentation Server.
