For courses in Forensic Accounting As a result of increased litigation and regulatory enforcement, the demand for forensic accountants has never been higher. This area of specialty is considered the top niche market in the accounting profession. The new Forensic Accounting is the first text of its kind to provide a comprehensive view of what forensic accountants actually do and how they do it. With experience as both practitioners and educators, authors Robert Rufus, Laura Miller, and William Hahn offer a unique perspective that bridges the gap between theory and practice. They present concepts in the context of a scientific approach, emphasising critical thinking, reasoning, and problem solving—skills that are useful in a wide variety of academic and professional environments. And because its content is consistent with the AICPA curriculum for the Certified in Financial Forensics (CFF) credential, this text gives your students a head start on the path toward career advancement. Forensic Accounting facilitates an outstanding teaching and learning experience—for you and your students. It will help you to: Introduce the requisite forensic accounting skills: The text identifies a three-layer skill set and provides students instruction in the key areas of forensic accounting expertise. Offer an inside view into forensic accounting practice: Integrated case studies and sample documents give students a glimpse into the actual practice of forensic accounting. Highlight the importance of a scientific approach: The authors explain the benefits of utilising a scientific approach and provide opportunities for students to practice its application. Foster thorough understanding via learning aids: Various tools, throughout the text and at the end of each chapter, support students as they learn and review. "The perspective of this book is to present "ethics" as a conversation about how we decide what is good or bad, right or wrong. It is a collection of conversations employed by educators to assist accounting students in developing their understanding of accounting's ethical aspects and to help them develop into critical thinkers who consider the ethical complexities of the function of accounting in human society. As social beings, ethics is a central human concern, since it involves determining the ethicality of human actions and their effect on other individuals, as well as determining the collective societal acceptance or rejection of an action. Thus, the book's primary goal is to call attention to the intersectionality of accounting and ethics, and to encourage students and researchers to consider the ethical implications of accounting decisions. The book contains a diversity of perspectives within which discussions of accountant's and accountings' ethical responsibilities may occur. The contributing authors were deliberately chosen for their diverse perspectives on from whence moral guidance for accounting may come. Each chapter stands on its own and represents the thinking of its authors. The book is not a primer on correct behavior for accountants, but a place where educators may spur the conversation along"--

Industrial revolutions have impacted both, manufacturing and service. From the steam engine to digital automated production, the industrial revolutions have conduced significant changes in operations and supply chain management (SCM) processes. Swift changes in manufacturing and service systems have led to phenomenal improvements in productivity. The fast-paced environment brings new challenges and opportunities for the companies that are associated with the adaptation to the new concepts such as Internet of Things (IoT) and Cyber Physical Systems, artificial intelligence (AI), robotics, cyber security, data analytics, block chain and cloud technology. These emerging technologies facilitated and expedited the birth of Logistics 4.0. Industrial Revolution 4.0 initiatives in SCM has attracted stakeholders' attentions due to it is ability to empower using a set of technologies together that helps to execute more efficient production and distribution systems. This initiative has been called Logistics 4.0 of the fourth Industrial Revolution in SCM due to its high potential. Connecting entities, machines, physical items and enterprise resources to each other by using sensors, devices and the internet along the supply chains are the main attributes of Logistics 4.0. IoT enables customers to make more suitable and valuable decisions due to the data-driven structure of the Industry 4.0 paradigm. Besides that, the system's ability of gathering and analyzing information about the environment at any given time and adapting itself to the rapid changes add significant value to the SCM processes. In this peer-reviewed book, experts from all over the world, in the field present a conceptual framework for Logistics 4.0 and provide examples for usage of Industry 4.0 tools in SCM. This book is a work that will be beneficial for both practitioners and students and academicians, as it covers the theoretical framework, on the one hand, and includes examples of practice and real world.

Biochar for Environmental Management

Ise, Advanced Accounting 10e

Childhood Acute Lymphoblastic Leukemia

Biochar is the carbon-rich product when biomass (such as wood, manure or crop residues) is heated in a closed container with little or no available air. It can be used to improve agriculture and the environment in several ways, and its stability in soil and superior nutrient-retention properties make it an ideal soil amendment to increase crop yields. In addition to this, biochar sequestration, in combination with sustainable biomass production, can be carbon-negative and therefore used to actively remove carbon dioxide from the atmosphere, with major implications for mitigation of climate change. Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process. This book is the first to synthesize the expanding research literature on this topic. The book's interdisciplinary approach, which covers engineering, environmental sciences, agricultural sciences, economics and policy, is a vital tool at this stage of biochar technology development. This comprehensive overview of current knowledge will be of interest to advanced students, researchers and professionals in a wide range of disciplines.

This book provides a comprehensive and up-to-date review of all aspects of childhood Acute Lymphoblastic Leukemia, from basic biology to supportive care. It offers new insights into the genetic pre-disposition to the condition and discusses how response to early therapy and its basic biology are utilized to develop new prognostic stratification systems and target therapy. Readers will learn about current treatment and outcomes, such as immunotherapy and targeted therapy approaches. Supportive care and management of the condition in resource poor countries are also discussed in detail. This is an indispensable guide for research and laboratory scientists, pediatric hematologists as well as specialist nurses involved in the care of childhood leukemia.

Packed with reader-friendly illustrations, ESSENTIALS OF BUSINESS LAW AND THE LEGAL ENVIRONMENT, 12e uses a nontechnical presentation to help your students understand the dynamics of today's legal environment for business.

Covering a broad variety of key subjects and emphasizing ethical decision making, the text presents all business law topics required for success on the CPA exam. Cases are carefully summarized and integrated in order to present both recent legal issues and landmark court decisions while minimizing legal jargon. Students learn to effectively apply legal reasoning to cases and legal issues using the Issue, Rule, Application and Conclusion (IRAC) method. In addition to new Going Global features that highlight the international aspects of legal issues, the 12th Edition also includes more than 30 recent cases, updated coverage of limited liability companies and suretyship, amendments to UCC Articles, SEC rules on social media, recent U.S. Supreme Court decisions, and much more. While strides are being made in the research and development of environmentally acceptable and more sustainable alternative fuels—including efforts to reduce emissions of air pollutants associated with combustion processes from electric power generation and vehicular transportation—fossil fuel resources are limited and may soon be on the verge of depletion in the near future. Measuring the correlation between quality of life, energy consumption, and the efficient utilization of energy, the Handbook of Alternative Fuel Technologies, Second Edition thoroughly examines the science and technology of alternative fuels and their processing technologies. It focuses specifically on environmental, technoeconomic, and socioeconomic issues associated with the use of alternative energy sources, such as sustainability, applicable technologies, modes of utilization, and impacts on society. Written with research and development scientists and engineers in mind, the material in this handbook provides a detailed description and an assessment of available and feasible technologies, environmental health and safety issues, governmental regulations, and issues and agendas for R&D. It also includes alternative energy networks for production, distribution, and consumption. What's New in This Edition: Contains several new chapters of emerging interest and updates various chapters throughout Includes coverage of coal gasification and liquefaction, hydrogen technology and safety, shale fuel by hydraulic fracturing, ethanol from lignocellulosics, biodiesel, algae fuels, and energy from waste products Covers statistics, current concerns, and future trends A single-volume complete reference, the Handbook of Alternative Fuel Technologies, Second Edition contains relevant information on chemistry, technology, and novel approaches, as well as scientific foundations for further enhancements and breakthroughs. In addition to its purposes as a handbook for practicing scientists and engineers, it can also be used as a textbook or as a reference book on fuel science and engineering, energy and environment, chemical process design, and energy and environmental policy.

Dying in America

Reactions, Mechanisms, and Structure

The Impact of FinTech, AI, and Crypto on Financial Services

Presents the research and cases that focus on the professional responsibilities of accountants and how they deal with the ethical issues they face. This title features articles on a broad range of important topics, including professionalism, social responsibility, ethical judgment, and accountability.

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.
