The transition to adulthood is a longer and more complex process than it was just a few decades ago, and a growing number of youth and young adults experience significant challenges in the establishment of an autonomous and independent lifestyle when compared to previous generations. Successful high school graduation followed by employment is no longer the inevitable trajectory for young people, especially in the current socio-economic context where jobs are less accessible and more demanding in terms of specialized skills and higher

academic qualifications. Unable to rely on family for emotional and financial support, vulnerable youth, who grow up in substitute care, are especially effected by the lengthening of this transition to adulthood. The dismal outcomes for youth growing up in care are by now well-documented, and more recently, a range of models have been proposed to help advance our understanding of these outcomes and how to forestall them. However, the literature on leaving care has long suffered from the absence of theory that could guide meaningful intervention. In response to this gap, *Leaving Care and the Transition to Adulthood* offers a comprehensive overview

of the newest contributions to this area in relation to theory, in addition to the Theory of Emerging Adulthood, while also featuring cutting-edge research and best practices that support adjustment across a range of domains for this population. International in scope, this book focuses on bringing together major advances that span the literature on transitioning to adulthood within the care system, offering a unique and important contribution to the field.

A graduate textbook on microeconomics, covering decision theory, game theory, and the foundations of contract theory, with a unique focus on the empirical. This graduate-level text on microeconomics, covering such topics as decision theory, game theory, bargaining theory, contract theory, trade under asymmetric information, and relational contract theory, is unique in its emphasis on the interplay between theory and evidence. It reviews the microeconomic theory of exchange “from the ground up,” aiming to produce a set of models and hypotheses

amenable to empirical exploration, with particular focus on models that are useful for the study of contracts, institutions, and organizations. It explores research that extends price theory to the exchange of commodities when markets are incomplete, discussing recent developments in the field. Topics covered include the relationship between theory and evidence; decision theory as it is used in contract theory and institutional design; game theory; axiomatic and strategic bargaining theory; agency theory and the class of models that are considered to constitute contract theory, with discussions of moral hazard and trade with asymmetric information; and the

theory of relational contracts. The final chapter offers a nontechnical review that provides a guide to which model is the most appropriate for a particular application. End-of-chapter exercises help students expand their understanding of the material, and an appendix provides brief introduction to optimization theory and the welfare theorem of general equilibrium theory. Students are assumed to be familiar with general equilibrium theory and basic constrained optimization theory.

Modern Economic Theory (M.E.)

Introductory Economic Theory [NEHU, Shillong]

This textbook for master programs in economics offers a comprehensive overview of microeconomics. It employs a carefully graded approach where basic game theory concepts are already explained within the simpler decision framework. The unavoidable mathematical content is supplied when needed, not in an appendix. The book covers a lot of ground, from decision theory to game theory, from bargaining to auction theory, from household theory to oligopoly theory, and from the

theory of general equilibrium to regulation theory. Additionally, cooperative game theory is introduced. This textbook has been recommended and developed for university courses in Germany, Austria and Switzerland. This book begins with an introduction to economics highlighting the economic problem of scarcity and choice. Further, it goes on and discusses the scope of economics as well as acquaints the students with the methodologies of economics. Basic microeconomic concepts such as demand, supply, competitive market equilibrium, elasticity and indifference curve analysis of

demand have been explained in a simple and lucid manner. The book also dwells into theories of production, distribution, rent, interest and profits. It also discusses the market structures prevailing in the capitalist economy, namely, perfect competition and imperfect competition; thoroughly highlighting the sub categories of imperfect competition such as monopolistic competition, oligopoly and monopoly. Concepts of average revenue and marginal revenue have also been discussed in the book.

covers selected topics in advanced macroeconomics at undergraduate level and bridges the gap between intermediate macroeconomics for undergraduates and advanced macroeconomics for postgraduates. By building on materials in intermediate macroeconomics textbooks and covering the mathematics of some classic dynamic general-equilibrium models, this book will give undergraduate students a firm appreciation of modern developments in macroeconomics. This book examines the implications of government policies (such as fiscal policy, monetary policy and innovation policy) and devotes

several chapters to economic growth, covering the ideas for which Paul Romer was awarded the Nobel Memorial Prize in Economic Sciences in 2018. Dynamic general equilibrium is the foundation of modern macroeconomics. Chapter 1 begins with a simple static model to demonstrate the concept of general equilibrium. Chapters 2 to 4 cover the neoclassical growth model, exploring the effects of exogenous changes in technology: an important source of business cycle fluctuations. Chapters 5 to 7 use the neoclassical growth model to explore the effects of fiscal policy instruments such as

government spending, labour income tax and capital income tax. Chapter 8 develops a simple New Keynesian model to analyse the effects of monetary policy. Chapter 9 begins the analysis of economic growth by reviewing the Solow growth model. Chapters 10 to 12 present the Ramsey model and introduce different market structures to the model to lay down the foundation of the Romer model. Chapter 13 incorporates an R&D sector into the Ramsey model with a monopolistically competitive market structure to develop the Romer model of endogenous technological change. Chapters 14 to 15 examine the

implications of the Romer model. Chapter 16 concludes this book by presenting the Schumpeterian growth model and examining its different implications from the Romer model.

developing countries. A major highlight of discussion in the context is the exploration of the widely accepted Amartya Sen's Capability Approach to development. The development of the endogenous growth model rekindled interest in growth theory. In contrast to the neo-classical model, long-run endogenous growth emerged as an equilibrium outcome, reflecting the behaviour of optimizing agents in the economy. This book brings together a number of contributions in growth theory and macroeconomic dynamics, reflecting these developments and the ongoing debate over the relative merits of neo-classical and

endogenous growth models. It focuses on the emergence of three important aspects: First, it develops growth models that extend the underlying theory in different directions. Second, it addresses one of the concerns of the literature on growth and dynamics: the statistical properties of underlying data and the effort to ensure that growth models are consistent with empirical evidence. Third, it discusses the increasingly international focus of macrodynamics and growth theory, an inevitable consequence of the integration of the world economy.

He presents a systematic treatment of the conceptual framework as well as the practical problems of measurement of inequality. In his masterful analysis, Sen assesses various approaches to measuring inequality and delineates the causes and effects of economic disparities. Containing the four lectures from the original edition as well as a new introduction, this timeless study is essential reading for economists, philosophers, and social scientists. In a substantial new annexe, Amartya Sen, jointly with James Foster, critically surveys the literature that

Capitalism is about to commit suicide and is threatening to take us down with it. But will it give way to a grand social utopia or the beginning of a new dark age... albeit WiFi enabled? The Worst is Yet to Come explores the disturbing possibility that the current crisis of neoliberal capitalism isn't going to spawn an emancipatory renaissance, but a world that is much, much worse.

Wealthy CEOs see it. They've been purchasing isolated bunker-retreats in New Zealand for when the shit goes down. Our politicians know it too, and are frantically transforming the liberal state into a militarized machine.

Scientists are either uselessly decrying the looming ecocatastrophe or jumping on the opportunity to conduct ever-reckless experiments with the human genome. The animal kingdom is retreating from the scene in terrible silence, preferring the swift demise of the abattoir's bolt-gun than witnessing what is about to happen. Yet some of us are still ignoring the warning signs, choosing instead to remain cheerfully optimistic, believing that society has probably hit rock bottom and the only way is up. This book argues the opposite. What if we haven't hit rock bottom and are on the precipice of something much worse? And what if we're too late? But this grim prospect isn't submitted in the name of millennial fatalism or hopeless resignation. On the contrary, if our
