

Advantages And Disadvantages Of The Three Economic Systems

There is no doubt that electronic marketing has contributed positively in the life of modern societies, mainly the consuming societies. It allowed purchasing of materials cheaply without any limit, and without any restrictions. It also gave the chance to make a free selection and comparison between the prices of goods at the electronic department stores throughout the Internet. All such facilities are given to the consumers in a very short time without causing them to leave their office or home. In addition, the Electronic Marketing has exterminated the monopoly of goods and materials, all such acts of course are for the consumer's benefit. However, in addition to such advantages there are many disadvantages of such type of marketing; the Electronic Marketing has deleted the privacy of the consumer, because all of his movements through the Internet have been divulged and under control, in addition to lack of exclusive security through the Internet. Accordingly, many losses equally occurred to the customer and the merchant due to such acts of hackers who reveal the information and credit cards details. In addition, the Electronic Marketing caused many merchants, agents and monopolists to be vanquished because it gave the chance for direct communications between the producer and the consumer without passing through them; as such, many of such merchants have been yielded away from the way of this new technology. The Electronic Marketing was able to cause an upset down in many concepts and standards of economic science that have existed for so many years. Doors are still open for every new in this assumption and endless world as there are no limits that can stop such human ambition. Cryptocurrency is a digital asset that has seen a large amount of attention within the past five years. Its origin is intriguing to some based upon its newness, yet it has invoked mysticism and skepticism in others. Bitcoin is the most recognizable currency, receiving heavy media attention. There are several other cryptocurrencies as well, less in the spotlight. Most appealing to cryptocurrency could include lack of government oversight, and increased privacy available to the consumer(s) (Bunjaku, Gjorgjeva-Trajkowska, and Miteva-Kacarski, 2017, p. 37). Additional advantages include the simplicity in the start-up process, the ease of transferability, and the opportunity to have a seamless process in investing and/or exchanging monies. Cryptocurrency creates the ability to invest for some people groups that could never invest before and diversify investment portfolios (Theron and van Vuure, 2018, p. 2). While the newness of cryptocurrency certainly has been appealing for some, it also has been perceived oppositional by others. There has been concerns identified with regard to the level of trust required, an obvious and significant drawback if valid. Another identified disadvantage to cryptocurrency is its low amount of oversight and liquidity hurt for investing future. The ability for cryptocurrency to be used for illegal and/or evil activity is an ethical drawback (Nian and Chuen, 2015, p. 15). Lastly, the uncertainty of the future is a significant drawback. The future of cryptocurrency requires much economic forecasting. The new changes that cryptocurrency will bring to traditional economic institutes is an area which cryptocurrency needs to explore more. Lastly, is cryptocurrency a fad or an economic bubble.

Academic Paper from the year 2018 in the subject Pedagogy - Common Didactics, Educational Objectives, Methods, , language: English, abstract: This work focuses on Future Education and its characteristics. Thereby it will have a closer look at the advantages and disadvantages of Online Education. Over the past several decades the rapid technological advancement has had an impact on every aspect of human life and education has been one of the most important beneficiaries of this phenomenon. However as technology continues to take a central role in today’s society, educational experts and professionals have raised concerns on the possible impacts that this will have not just on the system but also on the students and the society as whole. Some critics arguing that technology would in the future replace human intelligence. This, they argue would be as a result of the assumption of control by technologies over a considerable measure of undertakings and capacities that educators have been educating their students in the conventional education system. It is the position of this paper that despite the rise of technology and the central role it is now playing in the society, Education faces no threat, rather with the changing world; technology will only be driving force behind the restructuring of the education model as it aligns itself to the global changes.

The authors propose a theory which will conceptually account for many important behavioral characteristics of the family company, and which will incorporate and build upon previous descriptive and conceptual work done on family businesses. They argue that there are key attributes within each company that are the source of advantages and disadvantages of the company. These key attributes derive directly from the overlap of family-ownership and management memberships. The overlap of these membership groups generates the many distinguishing features of family companies.

Network Centric Warfare seems to have become the latest buzzword when talking about the future of the military. As technology improves, a more "connected/networked" force is more a reality and less a conceptualization. Recent operations in Afghanistan and Iraq have successfully demonstrated, to a degree, the operational applicability of network centric warfare and operations. However, network centric warfare is not one system; it is a system of systems from sensors to information flow. In analyzing the specific advantages and disadvantages of one of the systems, virtual collaboration, it becomes clear that commanders and staff at all levels of war are understanding the potential of this system but need to be wary of its potential shortfalls that can disrupt or negate any advantages gained. To exercise fully the capabilities of virtual collaboration, commanders and staffs must understand the limitations, develop coherent standards, implement training and make every effort to add virtual collaboration as part of their normal business practice in day-to-day activities.

Essay from the year 2010 in the subject Sociology - Individual, Groups, Society, grade: 1.1, Central Queensland University, course: Creative Arts Administration, language: English, abstract: Group decision-making is a process where an assembly of people convene to analyse problems or situations, evaluate alternative actions and reach solutions. Decisions may concern the judgement of a particular course of action, how best to solve a problem or the determination of the direction or magnitude of work ahead performed by teams or individuals. Deciding the best course of action can range in perplexity, depending on the effectiveness of how that group functions, the quality of alternatives that are generated, the amount of access to correct and adequate information and their understanding of the problem. Where time is of the essence and also befits the personification of money, it is customary for a business or organisation to engage in Group Decision-Making processes in the attempt to effectively and efficiently solve problems. Though some methods are more time-consuming some others. The group leader usually reserves judgement on which method is used in the Group Decision-Making process, because if one assembled a group to make a decision on what method should be used, what method would one use to decide? And so on one would ramble in an infinite loop. And if the group ever assembled without a leader, who’s idea was it for the group to assemble in the first instance? So the first advantage or disadvantage of a group decision would be how effective its leader is in managing the process, which can either be a solution in itself or it can be a problem. Though the greatest problem of all seems to be time.

Seminar paper from the year 2013 in the subject Economics - International Economic Relations, grade: 2.0, University of applied sciences Frankfurt a. M., course: Advanced Business English, language: English, abstract: Globalization is one of the major topics and challenges of our time. It describes the process of the worldwide increasing interconnection of economy, politics, culture and environment. This compression affects individuals, society and institutions as well as countries. It can help to increase prosperity, social justice and global networking in order to make the world more equal. In the following seminar paper, the prime importance will be the look at the effects of globalization on the world economy in general. Despite the advantages of globalization, the negative side with all the disadvantages should not be neglected. Therefore, it is essential to look at the advantages and disadvantages that are created by globalization. The question is to ask, if globalization really has the force to make the world more equal and who are the winners or the losers of it ? The available seminar paper tries to answer that question with a critical analysis of the topic. Chapter two pays attention to the fact what globalization really is and tries to identify the major characteristics of globalization. Chapter three concentrates on the consequences and effects of globalization on the world economy. The fourth chapter tries to identify the advantages and disadvantages. The seminar paper ends with a short result in chapter five, providing a short summary of the whole theme.

Strangely enough, contrary to popular opinion, self-satisfaction has not only advantages, but also disadvantages. For example, gradual depravity and sexual degradation. In this manual you will find all the answers. It is useful to honor both men and women to better understand the psychology and the characteristics of the stronger sex.

Seminar paper from the year 2008 in the subject Business economics - Accounting and Taxes, grade: 2.0, University of Glamorgan, 14 entries in the bibliography, language: English, abstract: Sustainability is developing in as important target for an increasing number of industries and governments. Especially in a faster moving world, which is determined by quarterly period reports, a long term orientation can be a competitive advantage for unlisted companies. In the 1960 7s by the US Department of Defense began to develop a tool to handle increasing costs. They recognised that the purchase price was not the only important criteria. Training or maintaining costs had to be considered for the total cost calculation, too. However, several definitions of Life cycle costing (LCC) exist that tend to be similar: 'monitoring the cost incurred throughout a product's life cycle' (Woodward, 1997) or 'LCC is the sum of all costs incurred during the life cycle of a building, system or product. It includes the costs of the project, development, acquisition, operation, conservation and maintenance and salvage value if it exists.' (Goralczyk, and Kulczycka, 2005). In the following essay several functions of life cycle costing will be drawn up. Furthermore, advantages, disadvantages and criticism of this procedure will be analysed.
