Agricultural Research and Development

An Assessment of the United States Food and Agricultural Research System

Abstract: In response to a Congressional call for action, Federal initiatives to improve and expand research, extension and higher education in human nutrition, home economics and family life are proposed. Federal commitments to strong human resources-oriented programs in a number of 4 high-priority problems: family economic stability and security; energy and environment; food, nutrition and health; and family strengthening in the environment. An implementation plan for each proposal suggests research and higher education activities, integration arrangements, and annual year targets. Proposed plans are to be conducted cooperatively by the USDA, land-grant universities, and cooperative extension services. The relationship between family needs and the food and agricultural system must be closely examined. Strong research and educational programs need Federal financial support and concerted effort in order to solve the problems of families in the 1980's.

Empirical studies indicate high economic returns from the public's investment in agricultural research. Yet, even as society is placing broader demands on the research system, taxpayer support for public agricultural research is unlikely to increase. Stronger ownership rights for intellectual property have increased incentives for private investment in agricultural research, but key elements still require direct public support. The USDA is developing new mechanisms to build a more effective public-private partnership in agricultural research.

**This book argues that Africa can feed itself in a generation and help contribute to global food security despite its history of persistent food shortages and the rising threat of climate change. To achieve this, the continent must harness scientific and technological advances, invest in infrastructure, foster higher technical training, and create regional markets. It must also foster a new crop of entrepreneurial leaders dedicated to the continent's economic improvement. This new edition provides ideas on how to place agriculture at the center of the continent's long-term economic transformation. It demonstrates how policy coordination can help realize agriculture's full potential as a motherboard for other economic activities. Incorporating lessons from academia, government, civil society, and private industry, The New Harvest outlines how African countries can work together at regional levels to generate new knowledge and resources, harness technological advancement, encourage entrepreneurship,**
