Modern motion control systems contribute significantly to intelligent industrial workflows, providing a high degree of flexibility, enabling convenient engineering and quick commissioning. The book "Fundamentals of Motion Control" addresses apprentices or students of engineering occupations and, moreover, everybody requiring basic information on motion control and related topics. Focusing on practicability, it explains the principles of motion control in a most comprehensible way. First, the book presents basic principles of electromagnetism and the functionality of motion control systems, followed by a closer look on the different types of electrical motors and feedback components. Further, the book explains operation principles of speed control units on the basis of the Sinamics family which has been designed for mechanical and industrial engineering applications. The following overview of the motion control system Simotion allows deeper insights into programming and commands. Thinking field-oriented, application-based and product-specific, the book concludes with a vivid example application for beginners, a glossary explaining important topic-related technical terms and, eventually, presenting a list of resources as a signpost for further studies.

Randiana, or Excitable Tales is an anonymously written erotic novel originally published by William Lazenby in 1884. The book depicts a variety of sexual activities, including incest, defloration and lesbianism.

In his 1972 Janeway Lectures at Princeton, James Tobin, the 1981 Nobel Prize winner for economics, submitted a proposal for a levy on international currency transactions. The idea was not greeted with enthusiasm, as the 1970s were a period of optimism and confidence in floating exchange rates. Yet, whenever currency crises erupted during the past decades, the proposal for a levy on international currency transactions would once again arise. In the 1990s, two additional facts have sharpened interest in the Tobin tax proposal. First is the growing volume of foreign exchange trading. Second, interest is coming not only from policymakers and experts concerned with the smooth functioning of financial markets. It is shared by those concerned with public financing of development--the fiscal crisis of the state as well as the growing need for international cooperation on problems such as the environment, poverty, peace and security. This work makes a systematic analysis of the proposal for a foreign exchange transactions levy. Its chapters examine the economic desirability of such a levy, its technical and political feasibility, its revenue potential, the possible uses of that revenue, and related administrative and institutional aspects.

This monograph demonstrates the interplay between Shannon information and semantic information in cognition. It shows that Shannon's information acts as driving force for the formation of semantic information; and vice versa, namely, that semantic information participates in the formation of Shannonian information. The authors show that in cognition, Shannonian and semantic information are interrelated as two aspects of a cognitive process termed as information adaptation. In the latter the mind/brain adapts to the environment by the deflating and/or inflating of the information conveyed by the environment. In the process of information adaptation, quantitative variations in Shannon's information entail different meanings while different meanings affect the quantity of information. The book illustrates the above conceptually and mathematically by reference to three cognitive processes: pattern recognition, face learning and the recognition of a moving object.

This book constitutes the refereed proceedings of the 8th International Conference on Web Reasoning and Rule Systems, RR 2014, held in Athens, Greece in September 2014. The 9 full papers, 9 technical communications and 5 poster presentations presented together with 3 invited talks, 3 doctoral consortial papers were carefully reviewed and selected from 33 submissions. The conference covers a wide range of the following: semantic Web, rule and ontology languages, and related logics, reasoning, querying, searching and optimization, incompleteness, inconsistency and uncertainty, non-monotonic, common sense, and closed-world reasoning for the web, dynamic information, stream reasoning and complex event processing, decision making, planning, and intelligent agents, machine learning, knowledge extraction and information retrieval, data management, data integration and reasoning on the web of data, ontology-based data access, system descriptions, applications and experiences.

In Learning with Information Systems the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries

Move over, Miss Marple—Mark Reutlinger’s charming cozy debut, the short novel Mrs. Kaplan and the Matzoh Ball of Death, introduces readers to the unforgettable amateur sleuth Rose Kaplan and her loyal sidekick, Ida. Everyone knows that Rose Kaplan makes the best matzoh ball soup around—she’s a regular matzoh ball maven—so it’s no surprise at the Julius and Rebecca Cohen Home for Jewish Seniors when, once again, Mrs. K wins the honor of preparing the beloved dish for the Home’s seder on the first night of Passover. But when Bertha Finkelstein is discovered facedown in her bowl of soup, her death puts a bit of a pall on the rest of the seder. And things go really meshugge when it comes out that Bertha choked on a diamond earring earlier stolen from resident Daisy Goldfarb. Suddenly Mrs. K is the prime suspect in the police investigation of both theft and murder. Oy vey—it’s a recipe for disaster, unless Rose and her dear friend Ida can summon up the chutzpah to face down the police and solve the mystery themselves. Praise for Mrs. Kaplan and the Matzoh Ball of Death “Is there kosher food in jail? These two heroines have gotten themselves in quite a pickle! Well, it’s a matzoh ball mess, really. Too deliciously funny!”—Rita Mae Brown, bestselling author of Nine Lives to Die “If you like humorous cozy mysteries like those featuring Miss Marple, then this new take on them might really appeal to you.”—Popcorn Reads “Good book. Good mystery. Good humor. All around it’s a solid ‘A’ to me and definitely worth a read.”—Bell, Book & Candle “If you’re on the hunt for a fun, mild-mannered mystery full of larger-than-life characters and more Yiddish expressions than you can shake a schtickl at, look no further than Mark Reutlinger’s Mrs. Kaplan and the Matzoh Ball of Death.”—Smitten by Books “A delightful cozy mystery . . . The writing was simple and easy to follow for the most part.”—Open Book Society
