This introductory text details the land surface of the earth in a readable style covering the major issues, key themes and sensitivities of the environments/landscape. Emphasizing the major ideas and their development, each chapter includes case studies and details of influential scientists (not necessarily geomorphologists) who have contributed to the progress of understanding. Providing a very clear

Acces PDF Alluvial Geoarchaeology Floodplain
Archaeology And Environmental Change

A long-term perspective on communities in the process of Neolithisation in the Lower Rhine Area (5500-2500 cal BC)
Floodplain Archaeology and Environmental Change
A Student Guide to Archaeological Analyses
Persistent Traditions

The Till-Tweed river catchment areas in Northumberland contain outstanding archaeological and palaeoenvironmental remains which have been in general only poorly understood. This study has assembled detailed data that will provide a platform for future landscape-based research and site-based investigation. Written from a landscape, or

geoarchaeological perspective, this study develops a methodology and management tool that will allow planners, curators and developers working in the region to to easily access information across sectors, and provide a transparent and easily comprehended record of sensitive archaeological and palaeoenvironmental sites.

This book provides an introductory understanding of fluvial geomorphic principles and how these principles can be integrated with geochemical data to cost-effectively characterize, assess and remediate contaminated rivers. The

book stresses the importance of needing to understand both geomorphic and geochemical processes. Thus, the overall presentation is first an analysis of physical and chemical processes and, second, a discussion of how an understanding of these processes can be applied to specific aspects of site assessment and remediation. Such analyses provide the basis for a realistic prediction of the kinds of environmental responses that might be expected, for example, during future changes in climate or land-use.

This book gives a comprehensive view of the

strengths and limits of the interdisciplinary methods that work together to form the geohistorical approach to geographical and geological sciences. The geohistorical approach can be synthetically defined as a multi- and interdisciplinary approach that uses techniques and perspectives, mainly from geography, history, and natural sciences, to examine topics that inform the space-time knowledge of environment, territory, and landscape. The boundary between the application of physical and human science methods is large and hazy. This volume exists at this boundary and offers an

approach that utilizes both historical data (from both physical and human records) and GIScience (e.g. GIS, cartography, GPS, remote sensing) to investigate the evolution of the environment, territory and landscape through both space and time. The first objective of this volume is to define the term geohistorical approach. An entire chapter focuses on a review of the main disciplines that connect geography and history, a review of the terms environment, territory, and landscape as objects of study of this approach, and the definition and importance of the geohistorical approach. The second goal is to

Acces PDF Alluvial Geoarchaeology Floodplain
Archaeology And Environmental Change
Cambridge Manuals In Archaeology

describe the methods used in the geohistorical approach. Eight chapters present the key methods also using examples of applications from the international context, offering an awareness of the potentials, limitations and accuracy of each method, with particular focus on the integration of methods. The third goal is to provide case studies to demonstrate the use and integration of geohistorical methods from both original material and published research. A final chapter is dedicated to an interdisciplinary case study from the Venetian Plain (Italy), providing an example of the integration of almost

Acces PDF Alluvial Geoarchaeology Floodplain

all methods described in the book.

This book highlights studies addressing significant anthropological issues in the Americas from the perspective of environmental archaeology. The book uses case studies to resolve questions related to human behavior in the past rather than to demonstrate the application of methods. Each chapter is an original or revised work by an internationally-recognized scientist. This second edition is based on the 1996 book of the same title. The editors have invited back a number of contributors from the first edition to revise and update their

geoarchaeological resource. Both the geographical and chronological coverage are broad ranging from the Lower Paleolithic (lower Pleistocene) to the Iron Age (late Holocene), and from rural Iran to urban Manhattan. The research presented here clearly demonstrates the value and practical application of geoarchaeological techniques from sediment-based dating to geographic information systems.

Three geo-archaeological approaches to the hidden landscapes of Italy

This book documents and assesses over ten years of research in the field, bringing together expertise and knowledge from the disciplines of archaeology and geomorphology, and highlighting important recent advances, discoveries and new directions. Reflecting the wide scope of current research in this area, the book contains over twenty papers focusing on various

aspects of alluvial archaeology from the methodology of dating, prospecting, excavating etc, to previously under-analysed geographical areas such as intertidal wetlands.

This books explores the bias that is introduced by erosion and sedimentation on the distribution of archaeological materials in Mediterranean landscapes. It describes innovative and interdisciplinary work that led to the formulation of a broad range of geo-

archeological approaches that are applied to two Italian areas, studied intensively by the Groningen Institute of Archaeology: the Pontine Region in South Lazio, and the Raganello Basin in North Calabria. The approaches deal with geological biases affecting the study of protohistoric remains in the sedimentary part of the Pontine plain; the development of a detailed landscape classification approach to predict and test site location preferences and survey

biases in the uplands of both study areas; and the development and evaluation of an innovative computerised landscape evolution model for a test area in the Raganello Basin uplands. In addition to the presented case study, this book also shows how the three geo-archaeological approaches can be applied in a wider context to quantitatively understand how erosion and sedimentation bias our understanding of archaeological records. Despite the fact that the human life of

the past cannot be understood without taking into account its ecological relationships, environmental studies are often marginalized in archaeology. This is the first book that, by discussing the meaning and purpose we give to the expression `environmental archaeology', investigates the reasons for such a problem. The book is written in an accessible manner and is of interest to all students who want to understand the essence of archaeology beyond the

Principles of Geoarchaeology Processes and Management for Ecosystem Services

East Anglia has long been known for its internationally significant cultural and environmental Palaeolithic archaeology, often overshadowing the potential of its Holocene resource. This volume details the results of 8 years of palaeoenvironmental, archaeological and geoarchaeological investigations focused on the post-glacial history and evolution of the Suffolk river valleys, funded by Historic

England and a number of commercial developers. The volume illustrates the largely untapped research potential of the region and provides information concerning the timing, pattern and process of alluvial development, landscape change, and human activity. The highlight of these investigations was the excavation and associated analyses of three well-preserved later prehistoric timber alignments and their environmental records, discovered during flood alleviation works on the floodplain of the lower Waveney Valley. As well

Acces PDF Alluvial Geoarchaeology Floodplain

as documenting these internationally significant remains, the research described includes innovative approaches to wetland archaeological and palaeoenvironmental study, highlighting important methodological considerations with respect to radiocarbon dating and chronology, applying novel geophysical approaches to site prospection, and recording wooden artefacts using 3-D laser scanning. The volume also discusses the results of groundwater monitoring of sediments containing the late prehistoric timber alignment

at Beccles and considers the longer-term preservation potential of these fragile remains, which – as with other wetland archaeological sites – are at ever increasing risk from development pressures, as well as the longer term impacts of climate and environmental change.

Fluvial Geomorphology studies the biophysical processes acting in rivers, and the sediment patterns and landforms resulting from them. It is a discipline of synthesis, with roots in geology, geography, and river engineering, and

Acces PDF Alluvial Geoarchaeology Floodplain

practical reference for practicing archaeologists and geoscientists who need to understand and apply geoarchaeological methodologies internationally.

This volume represents the most important “ deliverable ” of the European-funded project Radio-Past (www.radiopast.eu). It is intended to disseminate the key results achieved in the form of methodological guidelines for the application of non-destructive approaches in order to understand, visualize and manage complex archaeological sites, in particular large

multi-period settlements whose remains are still mostly buried. The authors were selected from among the project research “ staff ” but also from among leading international specialists who served as speakers at the two international events organized in the framework of the project (the Valle Giulia Colloquium of Rome – 2009 and the Colloquium of Ghent – 2013) and at the three Specialization Fora, the high formation training activities organized in 2010, 2011 and 2012. As such, the book offers contributions on diverse aspects of the

Dealing with biases

Geoarchaeology in Action provides much-needed 'hands on' methodologies to assist anyone conducting or studying geoarchaeological investigations on sites and in landscapes, irrespective of date, place and environment. The book sets out the essential features of geoarchaeological practice and geomorphological processes, and is deliberately aimed at the archaeologist as practitioner in the field. It explains the basics - what can be expected, what approaches may be taken, and what outcomes might be forthcoming, and asks what we can reasonably expect a micromorphological approach to archaeological contexts, data and problems to tell us. The twelve case studies are taken from Britain, Europe and the Near East. They illustrate how past landscape change can be discovered and deciphered

Acces PDF Alluvial Geoarchaeology Floodplain
Archaeology And Environmental Change

whether you are primarily a digger, environmentalist or soil micromorphologist. Based on the author's extensive experience of investigating buried and eroded landscapes, the book develops new ways of looking at conventional models of landscape change. With an extensive glossary, bibliography and more than 100 illustrations it will be an essential text and reference tool for students, academics and professionals.

Alluvial Geoarchaeology Floodplain Archaeology and Environmental Change Cambridge University Press

The adoption of agriculture is one of the major developments in human history. Archaeological studies have demonstrated that the trajectories of Neolithisation in Northwest Europe were diverse. This book presents a study into the archaeology of the communities involved in the process of Neolithisation in the

Lower Rhine Area (5500-2500 cal BC). It elucidates the role played by the indigenous communities in relation to their environmental context and in view of the changes that becoming Neolithic brought about. This work brings together a comprehensive array of excavated archaeological sites in the Lower Rhine Area. Their analysis shows that the succession of Late Mesolithic, Swifterbant culture, Hazendonk group and Vlaardingse culture societies represents a continuous long-term tradition of inhabitation of the wetlands and wetland margins of this area, forming a culturally continuous record of communities in the transition to agriculture. After demonstrating the diversity of the Mesolithic, the subsequent developments regarding Neolithisation are studied from an indigenous perspective. Foregrounding the relationship between local communities and

the dynamic wetland landscape, the study shows that the archaeological evidence of regional inhabitation points to long-term flexible behaviour and pragmatic decisions being made concerning livelihood, food economy and mobility. This disposition also influenced how the novel elements of Neolithisation were incorporated. Animal husbandry, crop cultivation and sedentism were an addition to the existing broad spectrum economy but were incorporated within a set of integrative strategies. For the interpretation of Neolithisation this study offers a complementary approach to existing research. Instead of arguing for a short transition based on the economic importance of domesticates and cultigens at sites, this study emphasises the persistent traditions of the communities involved. New elements, instead of bringing about radical changes, are

Acces PDF Alluvial Geoarchaeology Floodplain
Archaeology And Environmental Change
Cambridge Manuals In Archaeology

shown to be attuned to existing hunter-gatherer practices. By documenting indications of the mentalité of the inhabitants of the wetlands, it is demonstrated that their mindset remained essentially 'Mesolithic' for millennia. This book is accompanied by a separate 422 page volume containing the appendices. These constitute a comprehensive inventory of 159, mostly excavated archaeological sites in the Lower Rhine Area.

Contents include: Introduction (K Walsh); Palynology (S Bottema); A database for the palynological recording of human activity (V Andrieu, E Brugiapaglia, R Cheddadi, M Reille and J-L de Beaulieu); The contribution of anthracology (J-L Vernet); Dendroclimatology (F Guibal); Techniques in Landscape Archaeology (A G Brown); L'apport de la micromorphologie des sols (N Fédoroff); Reconstructing past soil environments (R S

ranging from the early Palaeolithic to Post-modernity, and from Europe to the Andes, West and East Africa, and the USA, Environmental Archaeology and the Social Order deals with both the theory and method of environmental archaeology. Including significant sections on Neanderthals, Palaeolithic mobiliary art and the origins of farming, as well as transhumance, climate as social construct, field survey and the place of documents in environmental research, Professor Evans interprets his findings in social

Acces PDF Alluvial Geoarchaeology Floodplain
Archaeology And Environmental Change
Cambridge Manuals In Archaeology

constructionist terms, creating an important argument against the use of traditional materialist and processualist paradigms. This original and controversial volume sets a new agenda for the study and understanding of environmental archaeology, and will prove an informative and useful purchase.

This book presents a balanced combination of practical and theoretical aspects of geoarchaeology. To do so, it gathers all the components of a natural framework (geology, relief, hydrography, climate,

soils, flora and fauna), which have been analyzed from an archaeological perspective. While globally this is a highly developed and researched area, unfortunately in Romania it is still a largely neglected field of study, as limited funds are available. However, the country has a huge potential and international researchers have applied geoarchaeological methods and techniques and published results in numerous journals. This area is important because traces of the Chalcolithic population

(Cucuteni culture) have been discovered here. The culture is considered to be the oldest one in Europe, and is highly significant for Romanian as well as European archaeology. The degradation of these settlements is the main core of the work, with illustrative case studies offering insights into the natural and, in some cases, anthropic effects on the sites.

Archaeological Science meetings will have a personality of their own depending on the focus of the host archaeological

fraternity itself. The 8th Australasian Archaeometry meeting follows this pattern but underlying the regional emphasis is the continuing concern for the processes of change in the landscape that simultaneously effect and illuminate the archaeological record. These are universal themes for any archaeological research with the increasing employment of science-based studies proving to be a key to understanding the place of humans as subjects and agents of change over time. This collection of refereed papers covers

Acces PDF Alluvial Geoarchaeology Floodplain
Archaeology And Environmental Change
Cambridge Manuals In Archaeology

the thematic fields of geoarchaeology, archaeobotany, materials analysis and chronometry, with particular emphasis on the first two. The editors Andrew Fairbairn, Sue O'Connor and Ben Marwick outline the special value of these contributions in the introduction. The international nature of archaeological science will mean that the advances set out in these papers will find a receptive audience among many archaeologists elsewhere. There is no doubt that the story that Australasian archaeology has to

tell has been copiously enriched by incorporating a widening net of advanced science-based studies. This has brought attention to the nature of the environment as a human artefact, a fact now more widely appreciated, and archaeology deals with these artefacts, among others, in this way in this publication.

There has long been a strong collaboration between geologists and archaeologists, and the sub-field of geoarchaeology is well developed as a discipline in its own right. This book now bridges the gap between those fields and the geophysical technique of ground-penetrating radar (GPR), which allows for three-dimensional analysis of the ground to visualize both geological and archaeological materials. This

method has the ability to produce images of the ground that display complex packages of materials, and allows researchers to integrate sedimentary units, soils and associated archaeological features in ways not possible using standard excavation techniques. The ability of GPR to visualize all these buried units can help archaeologists place ancient people within the landscapes and environments of their time, and understand their burial and preservation phenomena in three-dimensions. Readership: Advanced students in archaeology

and geoarchaeology, as well as practicing archaeologists with an interest in GPS techniques.

Geoarchaeological studies can significantly enhance interpretations of human prehistory by allowing archaeologists to decipher from sediments and soils the effects of earth processes on the evidence of human activity.

While a number of previous books have provided broad geographic and temporal treatments of geoarchaeology, this new volume presents a single author's view intended for North American

archaeologists. Waters deals with those aspects of geoarchaeologyÑstratigraphy, site formation processes, and landscape reconstructionÑmost fundamental to archaeology, and he focuses on the late Quaternary of North America, permitting in-depth discussions of the concepts directly applicable to that research. Assuming no prior geologic knowledge on the part of the reader, Waters provides a background in fundamental geological processes and the basic tools of geoarchaeology. He then proceeds to relate specific physical processes, microenvironments,

deposits, and landforms associated with riverine, desert, lake, glacial, cave, coastal, and other environments to archaeological site formation, location, and context. This practical volume illustrates the contributions of geoarchaeological investigations and demonstrates the need to make such studies an integral part of archaeological research. The text is enhanced by more than a hundred line drawings and photographs. CONTENTS 1. Research Objectives of Geoarchaeology 2. Geoarchaeological Foundations: The Archaeological Site Matrix:

***Sediments and Soils / Stratigraphy / The
Geoarchaeological Interpretation of Sediments,
Soils, and Stratigraphy 3. Alluvial Environments:
Streamflow / Sediment Erosion, Transport, and
Deposition / Alluvial Environments: Rivers,
Arroyos, Terraces, and Fans / Alluvial
Landscapes Evolution and the Archaeological
Record / Alluvial Landscape Reconstruction 4.
Eolian Environments: Sediment Erosion,
Transport, and Deposition / Sand Dunes / Loess
and Dust / Stone Pavements / Eolian Erosion /
Volcanic Ash (Tephra) 5. Springs, Lakes,***

**Rockshelters, and Other Terrestrial
Environments: Springs / Lakes / Slopes /
Glaciers / Rockshelters and Caves 6. Coastal
Environments: Coastal Processes / Late
Quaternary Sea Level Changes / Coastal
Environments / Coastal Landscape Evolution
and the Archaeological Record / Coastal
Landscape Reconstruction 7. The Postburial
Disturbance of Archaeological Site Contexts:
Cryoturbation / Argilliturbation / Graviturbation /
Deformation / Other Physical Disturbances /
Floralturbation / Faunalturbation 8.**

***Geoarchaeological Research Appendix A:
Geoarchaeological Studies Illustrating the
Effects of Fluvial Landscape Evolution on the
Archaeological Record Appendix B:
Geoarchaeological Studies Illustrating Site-
Specific Synchronic and Diachronic Alluvial
Landscape Reconstructions Appendix C:
Geoarchaeological Studies Illustrating Regional
Synchronic and Diachronic Alluvial Landscape
Reconstructions***

***This volume contains the selected proceedings
of a multidisciplinary conference (Ghent, 2006),***

which stimulated looking at landscape evolution from the times of early human involvement in nature to much more recent historical developments.

This volume brings together contributions from an experienced group of archaeologists and geologists whose common objective is to present thorough and current reviews of the diverse ways in which methods from the earth sciences can contribute to archaeological research. Many areas of research are addressed here, including artifact analysis and sourcing,

**landscape reconstruction and site formation
analysis, soil micromorphology and geophysical
exploration of buried sites.**

Practical and Theoretical Geoarchaeology

A North American Perspective

Ground-penetrating Radar for Geoarchaeology

An Interdisciplinary Approach

*This much-enhanced new edition of the highly accessible
guide to practical archaeology is a vital resource for
students. It features the latest methodologies, a wealth of
case studies from around the world, and contributions from*

leading specialists in archaeological materials analysis. New edition updated to include the latest archaeological methods, an enhanced focus on post-excavation analysis and new material including a dedicated chapter on analyzing human remains Covers the full range of current analytic methods, such as analysis of stone tools, human remains and absolute dating Features a user-friendly structure organized according to material types such as animal bones, ceramics and stone artifacts, as well as by thematic topics ranging from dating techniques to report writing, and ethical concerns. Accessible to archaeology students at all levels, with detailed references and extensive case studies featured

throughout

Environmental Archaeology: Theoretical and Practical Approaches outlines and assesses the various methods used to reconstruct and explain the past interaction between people and their environment. Emphasising the importance of a highly scientific approach to the subject, the book combines geoarchaeological, bioarchaeological (archaeobotany and zooarchaeology) and geochronological information and examines how these various aspects of archaeology may be used to enhance our knowledge and understanding of past human environments. Drawing from both the practical experiences of the authors and cutting-

edge research, Environmental Archaeology: Theoretical and Practical Approaches is a valuable contribution to the subject. It will be essential reading for students and professionals in archaeology, geography and anthropology. Many fundamental studies of the origins of states have built upon landscape data, but an overall study of the Near Eastern landscape itself has never been attempted. Spanning thousands of years of history, the ancient Near East presents a bewildering range of landscapes, the understanding of which can greatly enhance our ability to infer past political and social systems. Tony Wilkinson now shows that throughout the Holocene humans altered the Near Eastern

environment so thoroughly that the land has become a human artifact, albeit one that retains the power to shape human societies. In this trailblazing book—the first to describe and explain the development of the Near Eastern landscape using archaeological data—Wilkinson identifies specific landscape signatures for various regions and periods, from the early stages of complex societies in the fifth to sixth millennium B.C. to the close of the Early Islamic period around the tenth century A.D. From Bronze Age city-states to colonized steppes, these signature landscapes of irrigation systems, tells, and other features changed through time along with changes in social,

economic, political, and environmental conditions. By weaving together the record of the human landscape with evidence of settlement, the environment, and social and economic conditions, Wilkinson provides a holistic view of the ancient Near East that complements archaeological excavations, cuneiform texts, and other conventional sources. Through this overview, culled from thirty years' research, Wilkinson establishes a new framework for understanding the economic and physical infrastructure of the region. By describing the basic attributes of the ancient cultural landscape and placing their development within the context of a dynamic environment, he breaks new ground in
