lacked cohesion. “The Federalist”, as it was previously known, was constructed by American statesman Alexander Hamilton, and was intended to catalyse the ratification of the United States Constitution. Hamilton recruited fellow statesmen James Madison Jr., and John Jay to write papers for the compendium, and the three are known as some of the Founding Fathers of the United States. Alexander Hamilton (c. 1755–1804) was an American lawyer,

For generations Black people have been told they have what is now said to be more than one trillion dollars of "buying power," and this book argues that commentators have misused this claim largely to blame Black communities for their own poverty based on squandered economic opportunity. This book exposes the claim as both a marketing strategy and myth, while also showing how that myth functions simultaneously as a case

'Blueprint for Black Power' details a master plan for the power revolution necessary for Black survival in the 21st century. Such a power differential must be neutralized if Blacks are to prosper in the 21st century ... "The issue of self-hatred has very deep historical roots going way back into colonial history of the Fifteenth-century and beyond. In this text Amos Wilson details its origins as it evolved from biblical times with curse of Ham in the Old Testament up through the Middle Ages, enslavement, Jim Crow sadism and up to the present time. This experience has had long lasting impact on the creating, shaping and defining of the African American personality in particular, and the African personality worldwide. This text sets about exploring this development in its many aspects and attempts a reclamation of the African (often spelled

An intersectional history of the shared struggle for African American and Latinx civil rights Spanning more than two hundred years, An African American and Latinx History of the United States is a revolutionary, politically charged narrative history, arguing that the "Global South" was crucial to the development of America as we know it. Scholar and activist Paul Ortiz challenges the notion of westward progress as exalted by widely taught formulations like "manifest destiny" and

“Jacksonian democracy,” and shows how placing African American, Latinx, and Indigenous voices unapologetically front and center transforms US history into one of the working class organizing against imperialism. Drawing on rich narratives and primary source documents, Ortiz links racial segregation in the Southwest and the rise and violent fall of a powerful tradition of Mexican labor organizing in the twentieth century, to May 1, 2006, known as International Workers’ Day, when migrant laborers—Chicana/os, Afrocubanos, and immigrants from every continent on earth—united in resistance on the first “Day

Without Immigrants.” As African American civil rights activists fought Jim Crow laws and Mexican labor organizers warred against the suffocating grip of capitalism, Black and Spanish-language newspapers, abolitionists, and Latin American revolutionaries coalesced around movements built between people from the United States and people from Central America and the Caribbean. In stark contrast to the resurgence of “America First” rhetoric, Black and Latinx intellectuals and organizers today have historically urged the United States to build bridges of solidarity with the nations of the Americas. Incisive and timely, this bottom-

up history, told from the interconnected vantage points of Latinx and African Americans, reveals the radically different ways that people of the diaspora have addressed issues still plaguing the United States today, and it offers a way forward in the continued struggle for universal civil rights. 2018 Winner of the PEN Oakland/Josephine Miles Literary Award

Prior to the 1960s, when African Americans had little access to formal political power, black popular culture

was commonly seen as a means of forging community and effecting political change. But as Richard Iton shows, despite the changes politics, black artists have continued to play a significant role in the making of critical social spaces.

From the introduction: A cursory review of modern history will show that very rarely will a group/community/country achieve sustainable political and social power without economic power. While economic power alone will not solve the Black community's problems, any plan or strategy that does not have a strong economic component will most certainly be a nonstarter. Token political appointments

without economic clout behind them are symbolic at best; not very useful for affecting the social or political landscape of a market-driven society. As stated by Dr. Claud Anderson, "Groups with their own economies make wealth-producing decisions in their own best interests. The world is a competitive place and there are few, if any, incentives for other groups to intentionally make decisions in the best interests of Black Americans." And Chancellor Williams states: The economic basis of African life was originally cooperative. Mutual aid was, perhaps, the most significant aspect of the culture. Cooperative undertakings did not stem from any ideology other than commonsense, for them

cooperation was one of nature's more important schemes for survival. It seems that this common sense is no longer common. Furthermore, the severe lack or mismanagement of resources can cripple institutional capacity, and both directly and indirectly cause a ripple effect of problems in many other areas of a society (health, education, religion/spirituality, politics/law, etc.). Assuming this basic understanding is correct, Africans and their descendants around the globe must adopt a strategy of cooperative economic self-determination as a prerequisite for the sustainable improvement and continual, positive progression of their existence. Oppressed and under-developed societies throughout

history have used various forms of cooperative self-help to improve their standing among other nations. At its core, an economy is simply a set of relationships between people. For the purposes of this work we are defining economic development as the development of economic systems, which work in concert with social, cultural, and political systems, to fund the advancement of a culture and/or society. The scholarship around Black economic development already exists in significant volume. However, it seems that the Black institutions, and the leaders within them, with the most potential to make use of these insights lack the knowledge, vision and/or strategic direction to capitalise upon them. They

Consilience (a word that originally meant "jumping together"), Edward O. Wilson renews the Enlightenment's search for a unified theory of knowledge in disciplines that range from physics to biology, the social sciences and the humanities. Using the natural sciences as his model, Wilson forges dramatic links between fields. He explores the chemistry of the mind and the genetic bases of culture. He postulates the biological principles underlying works of art from cave-drawings to Lolita. Presenting the latest findings in prose of wonderful clarity and oratorical eloquence, and synthesizing it into a dazzling whole, Consilience is science in the path-clearing traditions of Newton, Einstein, and Richard Feynman.
