Presents proof that an advanced black African civilization inhabited the Sahara long before Pharaonic Egypt • Reveals black Africa to be at the genesis of ancient civilization and the human story • Examines extensive studies into the lost civilization of the “Star People” by renowned anthropologists, archaeologists, genetic scientists, and cultural historians as well as the authors’ archaeoastronomy and hieroglyphics research • Deciphers the history behind the mysterious Nabta Playa ceremonial area and its stone calendar circle and megaliths Relegated to the realm of archaeological heresy, despite a wealth of hard scientific evidence, the theory that an advanced civilization of black Africans settled in the Sahara long before Pharaonic Egypt existed has been dismissed and even condemned by conventional Egyptologists, archaeologists, and the Egyptian government. Uncovering compelling new evidence, Egyptologist Robert Bauval and astrophysicist Thomas Brophy present the anthropological, climatological, archaeological, geological, and genetic research supporting this hugely debated theory of the black African origin of Egyptian civilization. Building upon extensive studies from the past four decades and their own archaeoastronomical and hieroglyphic research, the authors show how the early black culture known as the Cattle People not only domesticated cattle but also had a sophisticated grasp of astronomy; created plentiful rock art at Gilf Kebir and Gebel Uwainat; had trade routes to the Mediterranean coast, central Africa, and the Sinai; held spiritual and occult ceremonies; and constructed a stone calendar circle and megaliths at the ceremonial site of Nabta Playa reminiscent of Stonehenge, yet much older. Revealing these “Star

People” as the true founders of ancient Egyptian civilization, this book completely rewrites the history of world civilization, placing black Africa back in its rightful place at the center of mankind’s origins. This volume reflects the most recent state of research on ancient Egypt presented and discussed at the international conference Current Research on Egyptology XVII, May 2016. Nine papers are arranged chronologically covering the wide time span from the Predynastic till the Graeco-Roman Period, with the remaining five considering more general thematic, theoretical and cross-cultural topics. Papers re-examine the archives from early excavations of pre-Dynastic tombs in the light of modern research; discuss various types of object from different periods; consider the roles of travelling artists and regional artistic schools styles and the mobility of ancient high-skilled craftsmen. Thematic, theoretical, and cross-cultural papers consider the relation of gods, cosmic sacredness and fertility beliefs; take a comparative approach to cultural identity extracted from narrative poetry of Greek and Egyptian origin; the inclusion of Egyptian musical elements incorporated into Greek traditions and the analysis of artifacts from the Egyptian collection of Zagreb, illustrating the range of information that essentially unprovenanced objects may have for future research.

The sixth annual Current Research in Egyptology symposium took place from 6th-8th January 2005 at the University of Cambridge. Although the topics covered by the papers were many and varied, if there is a general theme it would be that of exploring the borders and parameters of the discipline of Egyptology. Contents: Preface; Symposium papers not included in this volume; Bringing Egypt out of academia: Outreach and inclusion in the Petrie Museum (Yvette E Balbaligo); Pepi I and the Temple of Satet at Elephantine (Richard Bussmann); The unique Amun-Re at Luxor Temple (Andras Gulyas); Ostraca, literature and teaching at Deir el-Medina (Fredrik Hagen); Children and the dead in New Kingdom Egypt (Nicola Harrington); 'It is better to be silent than speak in vain': The

The sixteenth Current Research in Egyptology (CRE) conference was held from the 15–18 April 2015 at the University of Oxford and once again provided a platform for postgraduates and early career Egyptologists, as well as independent researchers, to present their research. These proceedings for CREXVI represent the wide-range of themes that were offered by delegates during the conference. Papers focus on the theme of travel in ancient Egypt from a wide range of perspectives such as concrete or abstract travels, travel in space and time, travel inside, to, or from Egypt, travel in literature, travel of beliefs and ideas or travel of objects.

of Egyptian Archaeology in London. The book first discusses the archaeological value of beads and the method employed in the study of them, especially emphasizing the importance of the technique of bead-making for dating purposes. It then examines and evaluates various schemes for the classification of beads. The book goes on to propose a new classification system and works out a comprehensive corpus of beads with the aid of sixteen plates. Next, the book features a chronological survey that details the material, typology (including the technical peculiarities), use, arrangement and pictorial representation of beads throughout the nine divisions or periods of Ancient Egyptian history. This survey points out the characteristics of each period as well any contact Egypt may have experienced with foreign countries as shown by the beads. It also corrects much wrong identifications of materials and mistaken datings. This book is based on the Ph.D dissertation written by pioneering Chinese archaeologist Xia Nai when he studied in London College University some 70 years ago and who had direct access to considerable firsthand resources at the forefront of Egyptology research. It represents a crucial and long-awaited advance in

archaeology, not only for Egypt but for the study of the past across Africa and beyond.

This book will try to give a review of the history of the studies of Ancient Egypt done in Southeast Europe, and present some of the latest research. The book comprises a selection of papers in which scholars from various institutions of the region reviewed the different aspects of past studies along with recent research in the field.

Become an Egyptologist ! Our fascination with ancient Egypt actually extends back to the dynastic periods itself. Royal family members and key princes during some New Kingdom eras were very interested in the mysterious and storied history of their home land and worked to preserve monuments, stories, temples, etc. When the Arabs finally ended the Egyptian culture, for all intents and purposes, the interest in the history of the nation did not die with the end of dynastic Egypt. The Arabs themselves were highly fascinated with the enduring and rather strange culture they bore witness to. What most of us would consider to be the academic study of ancient Egypt, Egyptology, is thought to have begun during the invasion of Napoleon and the French. We

know that Napoleon had a keen interest in ancient Egypt and after his successful invasion, he wished to learn as much about this mystical land as he could. He sent out a bevy of scholars and researchers to document everything they could about the monuments, culture, and administration of this land. With each passing year, we learned more and more about these people and also the importance of preserving their history for posterity. History is not only a rich, highly entertaining story, but it is a valuable lesson about where we came from and how we got to be what we are today. Hundreds of years have passed since the first westerners entered Egypt with the intent to uncover the secrets of this mysterious land. And while she has yielded some of her secrets, there is still a great deal to be discovered about Egypt, and also much that is probably permanently lost to the proverbial sands of time.

The thirteenth Current Research in Egyptology (CRE) conference was held from the 27th – 30th March 2012 at the University of Birmingham and once again provided a platform for postgraduates and early career Egyptologists, as well as independent researchers, to present their research. bibliography for further reading Africa may have given rise to the first human beings, and Egypt probably gave rise to the first great civilizations, which continue to fascinate modern societies across the globe nearly 5,000 years later. From the Library and Lighthouse of Alexandria to the Great Pyramid at Giza, the Ancient Egyptians produced several wonders of the world, revolutionized architecture and construction, created some of the world's first systems of mathematics and medicine, and established language and art that spread across the known world. With world-famous leaders like King Tut and Cleopatra, it's no wonder that today's world has so many Egyptologists. What makes the accomplishments of the Ancient Egyptians all the more remarkable is that Egypt was historically a place of great political turbulence. Its position made it both valuable and vulnerable to tribes across the Mediterranean and the Middle East, and Ancient Egypt had no shortage of its own internecine warfare. Its most famous conquerors would come from Europe, with Alexander the Great laying the groundwork for the Hellenic Ptolemy line and the Romans extinguishing that line after defeating Cleopatra and driving her to suicide. Perhaps the most intriguing aspect of ancient Egyptian civilization was its inception from the ground up, as the ancient Egyptians had no prior civilization which they could use as a template. In fact, ancient Egypt itself became a template for the civilizations that followed. The Greeks and the Romans were so impressed with

Egyptian culture that they often attributed many attributes of their own culture—usually erroneously—to the Egyptians. With that said, some minor elements of ancient Egyptian culture were, indeed, passed on to later civilizations. Egyptian statuary appears to have had an initial influence on the Greek version, and the ancient Egyptian language continued long after the pharaonic period in the form of the Coptic language. Although the Egyptians may not have passed their civilization directly on to later peoples, the key elements that comprised Egyptian civilization, including their religion, early ideas of state, and art and architecture, can be seen in other pre-modern civilizations. Indeed, since Egyptian civilization represented some fundamental human concepts, a study of their culture can be useful when trying to understand many other pre-modern cultures. Though he couldn't have known it, the various scholars and scientists Napoleon brought to Egypt kicked off modern Egyptology, and a general fascination across the West. Until about 200 years ago the writing of the ancient Egyptians was an enigma to the world, but that changed when an ancient Egyptian monument known today as the Rosetta Stone was discovered (or rediscovered serendipitously) by French soldiers in Egypt in 1799. Now one of the most famous monuments in the world, the Rosetta Stone is a black granite stele that was inscribed with texts in Greek and two different scripts of the ancient Egyptian language: demotic and hieroglyphs. Although damaged over

time, the Rosetta Stone still stands nearly four feet tall and over two feet wide, and it originally stood probably between five and six feet tall (Andrews 1982, 12). The discovery of the Rosetta Stone finally provided researchers with a way of reading the Egyptian language based on an understanding of the Greek translation. As more individuals headed for Egypt and made more groundbreaking discoveries, the interest in Egypt heightened, as did knowledge about ancient history, despite the fact it happened so long ago and covered an immense span of time. Thanks to all these efforts, modern Egyptologists are able to learn an incredible amount about different periods through reading the surviving texts currently preserved in museums throughout the world.

Violence and Gender in Ancient Egypt shifts the focus of gender studies in Egyptology to social phenomena rarely addressed through the lens of gender – war and violence, exploring the complex intersections of violence and gender in ancient Egypt. Building on current discussions in philosophy, anthropology, and sociology, and on analysis of relevant historic texts, iconography, and archaeological remains by looking at possible gender patterns behind evidence of trauma, the book bridges the gap between modern understandings of gendered violence and its functioning in ancient Egypt. Areas explored include the following: differences in gendered aggression and violent acts between people and deities; sexual violence; the taking of men, women, and children as

prisoners of war; and feminization of enemies. By examining ancient Egyptian texts and images with evidence for violence from different periods and contexts – private tombs, divine temples, royal stelae, papyri, and ostraca, ranging over 3,000 years of cultural history – Violence and Gender in Ancient Egypt highlights the complex intersection between gender and violence in ancient Egyptian culture. The book will appeal to scholars and students working in Egyptology, archaeology, history, anthropology, sociology, and gender studies.

Science in the Study of Ancient Egypt takes an innovative and integrated approach to the use of scientific techniques and methodologies within the study of ancient Egypt. Accessibly demonstrating how to integrate scientific methodologies into Egyptology broadly, and in Egyptian archaeology in particular, this volume will help to maximise the amount of information that can be obtained within a study of ancient Egypt, be it in the field, museum, or laboratory. Using a range of case studies which exemplify best practice within Egyptian archaeological science, Science in the Study of Ancient Egypt presents both the scientific methods of analysis available and their potential applications to Egyptologists. Although Egyptology has mainly shown a marked lack of engagement with recent archaeological science, the authors illustrate the inclusive but varied nature of the scientific archaeology which is now being undertaken, demonstrating how new analytical techniques can develop greater

The book's central proposition is that the prominent feature of the hiero-glyphic script which Egyptologists call

"determinatives" makes up an elaborate system of classifiers.

All items of the lexicon take motivated pictorial classifiers.

By this device, the script reflects the map of

knowledge organization of ancient Egyptian culture. The book aims

to reveal the principles and constraints governing the

codification of the ancient Egyptian universe in this system.

There is, to date, no comprehensive study, either in Egyptology or in cognitive linguistics, of the hieroglyphic classifiers as

a structured system. The present work attempts to fill the

existing hiatus by bridging the disciplines of Egyptology and

cognitive studies, using the tools of the latter to elucidate

the former and thus perhaps arrive at new perspectives on both. From the Egyptological angle, the book deals with the ancient Egyptians' nomenclature for "items in the world" and the relationship between lexicon and the knowledge organization. However, the events occurring in the picture-script render cognitive processes visible to our inspection hundreds of years before they have ripened into the Egyptian language. This "visibility" bears directly on a number of crucial questions in cognitive linguistics and ethnobiology. The book also includes an introduction to the hieroglyphic script. Egyptology: The History and Legacy of the Modern Study of Ancient Egypt

Ancient Egypt: The Basics offers an accessible and comprehensive introduction to the history, archaeology and influence of this fascinating civilization. Coverage includes: A survey of Egyptian history from its earliest origins to the coming of Islam Life and death in ancient Egypt Key archaeological discoveries and important characters Egypt's impact and reception through to the modern day Lively and engaging, this is an indispensable resource for anyone beginning their studies of Egyptian history, culture and archaeology, and a must-read for anyone who wants to learn more about the country's long and captivating past.

The ancient Egyptians are an enduring source of fascination - mummies and pyramids, curses and rituals have captured the imagination of generations. We all have a mental picture of ancient Egypt, but is it the right one? How much do we really know about this great civilization? In this absorbing introduction, Ian Shaw

describes how our current ideas about Egypt are based not only on the thrilling discoveries made by early Egyptologists but also on fascinating new kinds of evidence produced by modern scientific and linguistic analyses. He also explores the changing influences on our responses to these finds, through such media as literature, cinema and contemporary art. Each chapter deals with a different aspect of ancient Egypt, from despotic pharaohs to dismembered bodies, and from hieroglyphs to animal-headed gods. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable. This book addresses some of the main themes of the study of Egypt during the nineteenth and twentieth centuries. In a combination of case studies and discursive chapters, the status of Egypt as an important example of traditional Asian scholarship, and as an ancient model of imperialism itself, is examined. Contributions range from studies of nineteenth century antiquarianism, and the collecting of Egyptian antiquities as an extension of the territorial ambitions and rivalries of the European powers, to explorations of how Egypt is understood and interpreted in contemporary societies. Views of Ancient Egypt also considers the way in which Ancient Egypt has been adopted by less privileged members of some societies as a

Presents the latest research in Egyptology on the theme of Ancient Egypt in a Global World This selection of 23 papers from the 15th annual Current Research in Egyptology symposium addresses the interregional and interdisciplinary theme of 'Ancient Egypt in a Global World'. This theme works on a number of levels highlighting the current global nature of Egyptological research and it places ancient Egypt in the wider ancient world. The first section presents the results of recent excavations, including in the western Valley of the Kings and analysis of the structures, construction techniques, food production and consumption remains at Tell Timai (Thmuis) in the Delta. Part II focuses on the cross-cultural theme with papers including discussions on the presence in India of terracotta figurines from Roman Egypt; the ancient Egyptian influence of Aegean lion-headed divinities; Libyan influence in New Kingdom and Third Intermediate Period Egyptian administration and the identification of ancient Egyptian finds from the British countryside reported to the Portable Antiquities Scheme. The third part of the book includes current research undertaken across the world of Egyptology, including analysis of late Roman crocodile mummies through non-invasive radiographic imaging techniques and the study of infant jar-burials in ancient Egypt and Sudan to identify differences in regional socio-economic contexts and the interaction between people and local resources. Reveals many aspects of the Ancient Egyptian 36,000-year-old civilization, such as: their societal/political system—the source of Plato's Ideal Republic and Laws, and their knowledge practices in medicine, music, science, manufacturing, industries, trades, and much, much more. It is widely believed that the practice of ancient Egyptian religion ceased with the end of pharaonic culture and the rise of Christianity. However, an organised reconstruction and revival of the authentic practice of Egyptian, or Kemetic religion has been growing, almost undocumented, for nearly three decades. *Profane Egyptologists* is the first in-depth study of the now-global phenomenon of Kemeticism. Presenting key players in their own words, the book utilises extensive interviews that reveal a continuum of beliefs and practices spanning eight years of community growth. The editors explore the tension of competing visions of Egypt, which employ ancient material and academic resources, questioning the position of Egyptology as a gatekeeper of Egypt's past. Exploring these boundaries, the book highlights the politicised and economic factors driving the discipline's self-conception. Could an historically self-imposed insular nature have harmed Egyptology as a field, and how could inclusive discussion help guard against further isolationism? *Profane Egyptologists* is both an Egyptology

The rich history of Egypt has provided famous examples of board games played in antiquity. Evidence from these games provides evidence of contact between Egypt and its neighbours. From pre-dynastic times to Arab and Ottoman invasions, Egypt's past is visible on game boards. This volume starts by introducing the reader to board games as well as instruments of chance and goes on to trace the history and distribution of ancient Egyptian games, looking particularly at how they show contact with other cultures and civilizations. Game practices, which were also part of Egyptian rituals and divination, travelled throughout the eastern Mediterranean. This book explores the role of Egypt in accepting and disseminating games during its long history. Over the last few years, the external modes of contact have become better understood through museum and archival research projects as well as surveys of archaeological sites in Egypt and its surrounding regions. The results allow new insight into ancient Egypt's international relations and the role of board games research in

understanding its extent. Written by three authors known internationally for their expertise on this topic, this will be the first volume on Ancient Egyptian games of its kind and a much-needed contribution to the field of both Egyptology and board games studies.

Stelae like the Rosetta Stone were monuments that ancient Egyptian kings inscribed texts on,

usually to proclaim a battle victory or a legal decree. Since the kings who commissioned stelae to be built believed that the information they contained were important, they were usually large, as is the case with the Rosetta Stone. Although damaged over time, the Rosetta Stone still stands nearly four feet tall and over two feet wide, and it originally stood probably between five and six feet tall (Andrews 1982, 12). During his life and career, Petrie

discovered many tombs, developed several influential theories, and changed the way in which modern archaeology is practiced. Petrie's methods are, for the most part, still used today, and archaeologists from a wide array of studies owe a debt of gratitude to the Englishman. Petrie's life was fascinating in many respects beyond the firsts he recorded in the fields of archaeology and Egyptology. As Petrie excavated in Egypt and Palestine and taught and wrote in England, his career and life crossed paths with the famous and the yet to become famous. Petrie worked - and sometimes quarreled - with most luminaries in his fields, and while he influenced several of them, he was always willing to learn from others. In the process, he met important statesmen, philosophers, fellow explorers, and even a one-armed resistance leader. Thanks to all these efforts, modern Egyptologists have been able to learn an incredible amount about different periods through reading the surviving texts currently preserved in museums throughout the world and in the many temples and tombs in

Egyptology: The Missing Millennium brings together for the first time the disciplines of Egyptology and Islamic Studies, seeking to overturn the conventional opinion of Western scholars that Moslems/Arabs had no interest in pre-Islamic cultures. This book examines a neglected period of a thousand years in the history of Egyptology, from the Moslem annexation of Egypt in the seventh century CE until the Ottoman conquest in the 16th century. Concentrating on Moslem writers, as it is usually Islam which incurs blame for cutting Egyptians off from their ancient heritage, the author shows not only the existence of a large body of Arabic sources on Ancient Egypt, but also their usefulness to Egyptology today. Using sources as diverse as the accounts of travelers and treasure hunters to books on alchemy, the author shows that the interest in ancient Egyptian scripts continued beyond classical writers, and describes attempts by medieval Arab scholars, mainly alchemists, to decipher the hieroglyph script. He further

explores medieval Arab interest in Ancient Egypt, discussing the interpretations of the intact temples, as well as the Arab concept of Egyptian kingship and state administration—including a case study of Queen Cleopatra that shows how the Arabic romance of this queen differs significantly from Western views. This book will be of great interest to academics and students of archaeology, Islamic studies and Egyptology, as well as anyone with a general interest in Egyptian history.

The kings of ancient Egypt's first five dynasties were responsible for the creation of a unique and enduring civilisation, epitomised by its most impressive monuments, the pyramids. Yet what do we know about the reigns of these kings? Excavations have revealed much; but Egyptology has always been blessed with another rich source of information, the written texts and inscriptions composed by the ancient Egyptians themselves. For the history of the first five dynasties, one particular series of inscriptions has always been of prime importance. This is the collection

of inscribed, stone fragments known as the royal annals. Now divided between museums in Palermo, Cairo and London, these documents from ancient Egypt have been the focus of countless studies in the century or so since they first came to light. For they seem to record the reigns of Egypt's early kings on a reign-by-reign, year-by-year basis. The information they contain has been translated, interpreted and re-interpreted by generations of Egyptologists, in the hope of achieving a better understanding of the first great period of ancient Egyptian history. And yet amazingly for such crucial documents, no complete edition of all seven surviving fragments has ever been published. Royal Annals fills this gap. The text is accompanied by specially-commissioned, detailed line-drawings of all the fragments.

was a ritual that lay at the core of Egyptian society. Yet in the modern world, attention focused instead on unwrapping all the careful arrangements of linen textiles the Egyptians put in place. This book breaks new ground by looking at the significance of textile wrapping in ancient Egypt, and at how their unwrapping has shaped the way we think about the Egyptian past. Wrapping mummified bodies and divine statues in linen reflected the cultural values attached to this textile, with implications for understanding gender, materiality and hierarchy in Egyptian society. Unwrapping mummies and statues similarly reflects the values attached to Egyptian antiquities in the West, where the colonial legacies of archaeology, Egyptology and racial science still influence how Egypt appears in museums and the press. From the time of Tutankhamun to the Arab Spring, *Unwrapping Ancient Egypt* raises critical questions about our deep-seated fascination with this culture – and what that fascination says about our world.

First published in 1995. Routledge is an imprint of Taylor & Francis, an informal comparison. The Oxford Handbook of Egyptology offers a comprehensive survey of the entire study of ancient Egypt from prehistory through to the end of the Roman period. It seeks to place Egyptology within its theoretical, methodological, and historical contexts, indicating how the subject has evolved and discussing its distinctive contemporary problems, issues, and challenges. Transcending conventional boundaries between archaeological and ancient textual analysis, this volume brings together 63 chapters that range widely across archaeological, philological, and cultural sub-disciplines, highlighting the extent to which Egyptology as a subject has changed and stressing the need for it to seek multidisciplinary methods and broader collaboration.

to remain contemporary and relevant. Organized into ten parts, it offers a comprehensive synthesis of the various sub-topics and specializations that make up the field as a whole, from the historical and geographical perspectives that have influenced its development and characteristics, to aspects of museology and conservation, and from materials and technologies as evidenced in domestic architecture and religious and funerary items - to textual and iconographic approaches to Egyptian culture. Authoritative yet accessible, it serves not only as an invaluable reference work for scholars and students working within the discipline, but also as a gateway into Egyptology for classicists, archaeologists, anthropologists, sociologists, and linguists.

A History of Egyptology is a ground-breaking reference work that traces the study of ancient Egypt. Spanning 150 years and global in purview, it enlarges our understanding of how and why people have looked, and continue to look, into humankind's distant past through the lens of the enduring allure of ancient Egypt. Written by an international team of scholars, the volume investigates how territories around the world have engaged with and have been inspired by Egyptology, and how that engagement has evolved over time. Each chapter presents a specific territory from an institutional and national perspective, while examining a range of transnational links as well. The volume thus touches on multiple strands of scholarship, embracing not only Egyptology, but also social history, the history of science and reception studies. It will appeal to amateurs and professionals alike.

The history of Ancient Egypt has been studied in the region of Southeast Europe since the end of the nineteenth century. In some

of the countries this was not the case for various reasons, but mainly because of the undeveloped scholarly capabilities and institutions, insufficient funds for archaeological research in Egypt, and the lack of cooperation with scholars from other countries. From the 1960s, however, this situation has changed for the better, firstly with the numerous publications of the diffusion of the Ancient Egyptian cults during Graeco-Roman period, and then with publications (articles, catalogues, books) on Ancient Egyptian collections in various museum institutions located in Southeast Europe. From the early 1990s one can trace the increased production of various scholarly papers in which researchers from Slovenia, Croatia, Serbia, Macedonia, Romania, and Bulgaria not only researched the Egyptian cults in the Roman Empire, but also on the various aspects of history, religion and literature of Ancient Egypt. Their work, however, was mostly unknown to the scholars outside the region primarily because the results were written in the native languages. This book will try to give a review of the history of the studies of Ancient Egypt done in Southeast Europe, and present some of the latest research. The book comprises a selection of papers in which scholars from various institutions of the region

reviewed the different aspects of past studies and the development of the research of the Ancient Egypt in some countries, along with recent research in the field. We hope that this publication will be useful for all scholars who are unfamiliar with the historiography of this region.

Conflicted Antiquities is a rich cultural history of European and Egyptian interest in ancient Egypt and its material culture, from the early nineteenth century until the mid-twentieth. Consulting the relevant Arabic archives, Elliott Colla demonstrates that the emergence of Egyptology—the study of ancient Egypt and its material legacy—was as consequential for modern Egyptians as it was for Europeans. The values and practices introduced by the new science of archaeology played a key role in the formation of a new colonial regime in Egypt. This fact was not lost on Egyptian nationalists, who challenged colonial archaeologists with the claim that they were the direct heirs of the Pharaohs, and therefore the rightful owners and administrators of ancient Egypt's

historical sites and artifacts. As this dispute developed, nationalists invented the political and expressive culture of “Pharaonism”—Egypt’s response to Europe’s Egyptomania. In the process, a significant body of modern, Pharaonist poetry, sculpture, architecture, and film was created by artists and authors who looked to the ancient past for inspiration. Colla draws on medieval and modern Arabic poetry, novels, and travel accounts; British and French travel writing; the history of archaeology; and the history of European and Egyptian museums and exhibits. The struggle over the ownership of Pharaonic Egypt did not simply pit Egyptian nationalists against European colonial administrators. Egyptian elites found arguments about the appreciation and preservation of ancient objects useful for exerting new forms of control over rural populations and for mobilizing new political parties. Finally, just as the political and expressive culture of Pharaonism proved critical to the formation of new concepts of nationalist identity, it also fueled Islamist opposition to the Egyptian state.
