Recently, artificial**

**intelligence (AI),
the internet of
things (IoT), and
cognitive
technologies have
successfully been
applied to various
research domains,
including computer
vision, natural
language
processing, voice
recognition, and
more. In addition,**

AI with IoT has made a significant breakthrough and a shift in technical direction to achieve high efficiency and adaptability in a variety of new applications. On the other hand, network design and optimization for AI applications

addresses a complementary topic, namely the support of AI-based systems through novel networking techniques, including new architectures, as well as performance models for IoT systems. IoT has

***paved the way to a
plethora of new
application
domains, at the
same time posing
several challenges
as a multitude of
devices, protocols,
communication
channels,
architectures, and
middleware exist.
Big data generated
by these devices***

calls for advanced learning and data mining techniques to effectively understand, learn, and reason with this volume of information, such as cognitive technologies. Cognitive technologies play a major role in developing

**successful
cognitive systems
which mimic
“cognitive”
