Manufacturing Technology - II is a branch of mechanical engineering which extensively deals with the production of industrial goods with the help of advanced tools and machinery. This subject gives information which covers the more practical knowledge than the theory. It provides tool to enable production of manufacturing goods efficiently. The subject gives idea to maximise product quality and to minimise the production cost. It also gives information about the different surface finishing techniques. My hope is that this book, through its careful explanations of concepts, practical examples and figures bridges the gap between knowledge and proper application of that knowledge.

The book covers all the concepts of theory, analysis, and design of Electronic Circuits for the undergraduate course. The concepts of feedback amplifiers and oscillators, tuned amplifiers, wave shaping and multivibrator circuits, power amplifiers, and DC converters are explained in a comprehensive manner. The former part of the book focuses on the fundamental concepts of feedback amplifiers and oscillators. It explains the analysis of series-shunt, series-series, shunt-shunt, and shunt-series feedback amplifiers, stability and frequency compensation in feedback amplifiers. The concepts of the Barkhausen criterion for oscillations and the detailed analysis of various oscillator circuits including phase shift, Wien bridge, Hartley, Colpitt's, Clapp, ring, and crystal oscillators are included in the book. The oscillator amplitude stabilization is explained in support. Then the book focuses on the fundamental concept of tuned amplifiers. It explains topics such as coil losses, unloaded and loaded Q of tank circuits, analysis of single and double tuned amplifiers, the effect of cascading single tuned and double tuned amplifiers on bandwidth, stagger tuned amplifiers, stability of tuned amplifiers, and neutralization methods. The latter part of the book incorporates the detailed analysis of various wave shaping circuits, including high pass and low pass RC and RL circuits, clipper and clamper circuits, bistable, monostable, and astable multivibrator circuits. The discussion of Schmitt trigger circuits and UJT is also included in the book. Finally, the book explains the class A, B, and C types of power amplifiers along with the discussion of the elimination of cross-over distortion. The book also covers the concepts of power amplifiers using power MOSFET and various types of d.c. to d.c. converters. The book uses plain and lucid language to explain each topic. The variety of solved examples is the feature of this book. The book explains the philosophy of the subject, which makes the understanding of the concepts very clear and makes the subject more interesting.

What Happens in a Man's Innermost... is a cry. Of mind and heart. Of passion and commitment. Of pleasure and pain. Of logic and analysis. Of concepts and emotions. Of why and wherefore. Of bafflement and wonderment. what happens in a man's innermost... is a soliloquy. Not of a troubled soul but of a soulful soul. Thinking out loud. what happens in a man's innermost... is, 'I'm sure, not unique to this human being. whoever this 'human being' may be! i know not where from. i only know they come. Unasked, uncalled, unbidden. flooding, forming, blending. Thoughts falling and rising, flowing and ebbing, rolling, and etching into meaty mixes. Now turbulently gushing forth, now curiously peeping and peeling, now stunningly fretting and fuming, now gently curling over. With a clarity that surprises, with a purpose that questions, with a craze that defines, with an anger that belies belief. Thoughts that frantically search, that maddeningly beckon, that beggingly plead, that pleasure and pain, that bristle and bleed. Finally, all this tumult (hue!) and cry is just storm in a teacup. All this bouncing and battering is just storm before calm. As though nothing ever was that ever was, nothing ever is that ever is, nothing ever will be that ever will be. Mutually defining the 'me' in me.

This is very useful to all engineering national and international students because lot of new methods are introducing this book. so, students are very easily understanding any critical problems. This book is very excellent.

The existing Third Volume of our series of textbooks on Engineering Mathematics for students of B.E.,B.Tech. & B.Sc.(Applied Science)has been now split into two volumes,to cater to the needs of the syllabus semester-wise.This volume caters to the syllabus of fourth semester.Many worked examples are added in each chapter and a large number of problems are included in the Exercises.
