Numerous important issues arise in relation to the health of, and healthcare for (and by), migrants. Much commentary on the migrant crisis and healthcare has focused on the allocation of resources, with less discussion of the needs of, and provision for, migrants. Presenting a comparative perspective on the UK and Germany, this volume increases knowledge of a broad spectrum of challenges in healthcare provision for migrants. 'Migration' is deliberately understood in its broadest sense and includes not only migrant patients but also migrant healthcare professionals. The book's content is diverse, with insights from healthcare ethics, healthcare law, along with clinical perspectives as well as perspectives from the social sciences. The collection provides normative reflections on current issues, and presents data from empirical studies. By informing researchers, politicians and healthcare practitioners about approaches to challenges arising in healthcare provision for migrants, the collection seeks to inform the development of adequate and ethically appropriate strategies.

A comprehensive analysis of existing laws and policies governing organ transplantation practices around the world.

The motivation and inspiration for this book come directly from experiences with clients during the years that I practiced HIV-related law at the Legal Aid Society of San Diego, Inc. The issues discussed in this work reflect issues that arose on a recurring basis with clients participating in HIV research studies, with investigators calling for guidance on the legal implications of particular aspects of their proposed studies, and with research institutions and health care facilities struggling to make sense of legal maneuvers aimed at obtaining the records of their HIV-infected patients. It is impossible to thank each of these persons individually for their provocative questions and their insights. The discussion of ethical and legal issues relating to the design of clinical trials reflects questions raised during discussions with Donald J. Slymen, Ph.D. Don was one of the first researchers, in my realm of experience, to pay close attention to ethical concerns, and I am greatly appreciative of his contribution to both my professional growth and the development of various scenarios discussed in this text. The portions of this text dealing with confidentiality are the result of many hours of thoughtful discussion and analysis with Penn Lerblance, J.D., now deceased and still missed. Penn and I often participated together as presenters of in-service training programs for health professionals. Penn addressed discrimination, and I focused on confidentiality.

She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first "immortal" human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb's effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta's family did not learn of her "immortality" until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta's daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn't her children afford health insurance?

Intimate in feeling, astonishing in scope, and impossible to put down, The Immortal Life of Henrietta Lacks captures the beauty and drama of scientific discovery, as well as its human consequences.

The Legal and Ethical Aspects of Medical Quackery

Over the last quarter of a century, the fields of medical ethics and of legal issues related to medical practice have rapidly developed for a number of reasons. Firstly, the provision of healthcare nowadays is based on a complicated partnership between healthcare providers, patients, administrators and organizations responsible for providing finance; this complicated partnership frequently results in clashes of views, opinions, and priorities, which have a major ethical and legal dimension. Secondly, a major event of the 21st century is the development of multicultural societies; healthcare-related decisions thus have to be made on the background of so many different ethnicities, religions, cultures and languages, resulting in a great spectrum of ethical and legal implications. Thirdly, in the modern world, people are more mobile and can easily and cost-effectively seek treatment outside of their country of origin or residence, which raises many ethical and legal issues. Lastly, the development of new medical specialties, modern and advanced treatments for very challenging patients, and the introduction of new technologies in medical practice have dramatically broadened the spectrum of ethical and legal issues related to medical practice. This book will therefore aim to cover in detail general principles and specific issues related to the ethical and legal dimensions of modern surgical practice.

This book discusses and provides insight on the legal and ethical dilemmas of managing those with Fetal Alcohol Spectrum Disorder (FASD). This book provides a clear perspective for those clinicians and legal professionals who are working with those with this disorder, and correspondingly increases their understanding when arranging effective supports for this population. Historically, the primary focus on FASD has been on children. However, this is a lifelong disorder and the implications of this disorder become even more prominent and complex in adulthood. Those with this condition can struggle with impulsiveness, and a host of cognitive difficulties. This correspondingly impacts their independence and employability, and produces an elevated risk for homelessness and other residential issues, involvement in substance use, being exploited, development of behavioural issues, and subsequent legal difficulties. Their cognitive difficulties result in challenges for legal systems around the world to understand their issues, and to design appropriate remedial strategies, recommendations for treatments and supports, and even for understanding the failure of many of these individuals to be able to change their behaviours effectively. This produces various legal and ethical dilemmas, which are discussed in detail in this volume by 28 authors from Europe, New Zealand and North America. These include discussions regarding the rights of the unborn child, the alcohol industry's duty to warn, whether small amounts of alcohol during pregnancy can be condoned, and even the current use of involuntary hospitalization for addicted mothers. Other chapters discuss the need for training on FASD for front line officers, use of lies during interrogation of those with FASD, medical and legal interventions for offenders with FASD, access to diagnostic services and follow-up supports, and whether FASD can be considered a mitigating factor for sentencing. Furthermore, caregivers also provide their stories regarding the daily dilemmas that are faced in raising those with FASD.
