In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

John Dewey's *Democracy and Education* addresses the challenge of providing quality public education in a democratic society. In this classic work Dewey calls for the complete renewal of public education, arguing for the fusion of vocational and contemplative studies in education and for the necessity of universal education for the advancement of self and society. First published in 1916, *Democracy and Education* is regarded as the seminal work on public education by one of the most important scholars of the century.

*The astonishing, uplifting story of a real-life Indiana Jones and his humanitarian campaign to use education to combat terrorism in the Taliban's backyard Anyone who despairs of the individual's power to change lives has to read the story of Greg Mortenson, a homeless mountaineer who, following a 1993 climb of Pakistan's treacherous K2, was inspired by a chance encounter with impoverished mountain villagers and promised to build them a school. Over the next decade he built fifty-five schools—especially for girls—that offer a balanced education in one of the most isolated and dangerous regions on earth. As it chronicles Mortenson's quest, which has brought him into conflict with both enraged Islamists and uncomprehending Americans, *Three Cups of Tea* combines adventure with a celebration of the humanitarian spirit.*

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.

This grammar provides a synchronic grammatical description of Mauwake, a Papuan Trans-New Guinea (TNG) language of about 2000 speakers on the

north coast of the Madang Province in Papua New Guinea. It is the first book-length treatment of the Mauwake language and the only published grammar of the Kumil subgroup to date. Relying on other existing published and unpublished grammars, the author shows how the language is similar to, or different from, related TNG languages especially in the Madang province. The grammar gives a brief introduction to the Mauwake people, their environment and their culture. Although the book mainly covers morphology and syntax, it also includes a short treatment of the phonological system and the orthography. The description of the grammatical units proceeds from the words/morphology to the phrases, clauses, sentence types and clause combinations. The chapter on functional domains is the only one where the organization is based on meaning/function rather than structure. The longest chapter in the book is on morphology, with verbs taking the central stage. The final chapter deals with the pragmatic functions theme, topic and focus. 13 texts by native speakers, mostly recorded and transcribed but some originally written, are included in the Appendix with morpheme-by-morpheme glosses and a free translation. The theoretical approach used is that of Basic Linguistic Theory. Language typologists and professional Papuanist linguists are naturally one target audience for the grammar. But also two other possible,

and important, audiences influenced especially the style the writing: well educated Mauwake speakers interested in their language, and those other Papua New Guineans who have some basic training in linguistics and are keen to explore their own languages.

Annotation Here, at last, is the biography that Abigail Adams has long deservedone that puts her, rather than her husband, at its center, and which interprets her life in light of both its eighteenth-century context and recent feminist scholarship. Gelles brings new

insights to familiar topics like the Adamss marriage and Abigails wartime role; explains more fully than previous scholars such incidents as the failed courtship of Royall Tyler and Abigail Junior; and examines with sensitivity hitherto little-known episodes like that of Abigails epistolary flirtation with James Lovell during the Revolution or Abigail Juniors mastectomy in 1811. In short, this is a remarkable achievement, far surpassing all earlier attempts to capture the essence of the woman who was one of early Americas greatest letter-writers. Mary Beth Norton Edith Gelles has written a deeply interesting book about Abigail Adams. ... she is careful to reconstruct the eighteenth-century environment of Abigail Adams. De. Gelles is a careful historian of eighteenth-century America and a thoughtful biographer. She has given us a fresh examination of Abigail Adams which will stimulate in helpful ways additional research and discussion. Robert Middlekauf In this important and fascinating biography, Edith Gelles not only restores Abigail Adams to her rightful place at the center of her own story, she challenges the creaky conventions of traditional male-defined biography. Portia breaks ranks with the biographers twiceby refusing to treat Abigail Adams as a reflection of her husband and by refusing to force her lifes story into an artificially linear narrative. In this masterful work, Edith Gelles reconceptualizes and revolutionizes the very notion of biography by capturing experience as it truly unfolds in so many womens livesas a collage of overlapping and circular impressions and feelings, rather than a relentless climb up a ladder of public ambition. Susan Faludi The best biography of Abigail Adams in print.

By keeping the spotlight on Mrs. Adams and sensitively evaluating her in eighteenth-century terms, Edith Gelles provides the most rounded portrait yet of this important woman. Patricia U. [Gelles] story of relationships, networks, and power in the context of Abigail's eighteenth-century world is truly a superb accomplishment. American Historical Review Adams's strength, courage, and wit ... emerge more fully than they have in any previous work. ... [Gelles] has succeeded in providing a well-rounded portrait of a remarkable figure. Choice Portia ... Is a refreshing change of pace. ... [Edith Gelles] is affectionate yet scholarly, determined to present Adams as a strong character who was very much a woman of her time, not merely a liberated precursor to feminism or the little wife behind the great man. San Francisco Chronicle Portia, The first woman-centered biography of Abigail Adams, details the issues, events, and relationships that informed Adams's life. The portrait that emerges also describes women like her during the Revolutionary era. Much of Abigail Adams's independent reputation derives from the letters that she wrote for over a half-century. Personal and eloquent, they provide unusual access to her private life and capture the social conventions, politics, and people of her age. The letters describe her domestic relationships with her sisters, her daughter and sons, and friends such as Thomas Jefferson. Her marriage to John Adams is considered in the context of the

reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

In a book that is both groundbreaking and accessible, Daniel C. Dennett, whom Chet Raymo of The Boston Globe calls "one of the most provocative thinkers on the planet," focuses his unerringly logical mind on the theory of natural selection, showing how Darwin's great idea transforms and illuminates our traditional view of humanity's place in the universe.
