*A comprehensive survey of one of the most important texts of the Middle Ages.*

*The field of educational psychology draws from a variety of diverse disciplines including human development across the life span, measurement and statistics, learning and motivation, and teaching. And within these different disciplines, many other fields are featured including psychology, anthropology, education, sociology, public health, school psychology, counseling, history, and philosophy. In fact, when taught at the college or university level, educational psychology is an ambitious course that undertakes the presentation of many different topics all tied together by the theme of how the individual can best function in an "educational" setting, loosely defined as anything from pre-school through adult education. Educational psychology can be defined as the application of what we know about learning and motivation, development, and measurement and statistics to educational settings (both school- and community-based).*

*This book is a double first - the first collection together of all of Badiou's work on Beckett, and the first translation of this important material. Badiou presents a Beckett whose work is the work of philosophy itself - a philosophy in the full sense of the word, which works to reduce experience to its essential determinations. These essays together furnish a meditation on the developments of Beckett's ideas, always philosophically allusive, from first works through The Unnameable (a solipsist impasse, claims Badiou, from which it would take Beckett ten years to escape), to a final engagement with questions of the Other and Love.*

*Until now, there has only been a shallow understanding of how the leadership actions of project managers interact with ethics and social responsibility. Empirical research into this subject has been sparse. Responsible Leadership, by Nicholas Clarke, Alessia D'Amato, Malcolm Higgs, and Ramesh Vahidi is the first study to investigate how the relationships among managers, team members, and other stakeholders can bring about personal and ethical conflicts that impact decision making. In this groundbreaking book, the authors explore how those who serve as leaders on projects can exercise their roles in ways that respond to the ever-increasing need for ethical decision making. They examine the factors that enable and constrain responsible leadership, looking at the issues faced by project managers as they interact with team members and other stakeholders. Responsible Leadership also provides new insights into how project managers view the moral implications of conflicts that occur as they conduct their work and is a valuable addition to the project management toolkit.*

This practical introductory text helps students understand, conduct, and interpret both qualitative and quantitative paradigms in educational research methods. This book is organized around eight research methods to help users plan and conduct their first educational research projects. By proceeding through chapter contents and completing the in-text exercises, readers will simultaneously prepare a research plan and learn how to obtain and analyze data, address research questions and hypotheses, and prepare a report of their projects. In keeping with the main purpose of helping users clearly understand and apply research concepts, many pedagogical features have been included in the book. Additionally, each chapter contains one or more special sections titled "Applying Technology."

This volume explores how early potential develops into high performance in five domains: sport, the professions, academia, the performing arts, and the producing arts.

A practical and applied introduction to criminal justice Introduction to Criminal Justice: Practice and Process shows you how to think practically about the criminal justice system by offering you a proven, problem-based approach to learning. Bestselling authors Kenneth J. Peak and Tamara D. Madensen draw on their many years of combined practitioner and academic experience to explain the importance of criminal justice and show how key trends, emerging issues, historical background, and practical lessons can be applied in the field. New to the Third Edition: An emphasis on constitutional policing, legitimacy, and procedural justice stresses the importance for police to develop a "guardian" mindset over a "soldier" mindset. New discussions of contemporary criminological theories—such as social structure theories, social process theories, social conflict theories, feminist theories, and environmental criminology theories—provide you with a concise explanation on why people commit crimes and how to prevent them in the modern world. An in-depth view of three particularly challenging problems and policy issues—terrorism, the mentally ill population, and illegal immigration—demonstrate how today's society and the criminal justice system are affected by these issues and what can be done to address the problems. New examples and case studies of ethical dilemmas illustrate today's climate of distrust, dissension, and dysfunction to encourage you to think critically about what is considered "ethical". New video interviews with criminal justice professionals offer you career advice, provide you with insights into a variety of career paths, and discuss challenges and misconceptions of each profession.

In the 21st century, digital tools enable information to be generated faster and in greater profusion than ever before, to the point where its extent and value are literally beyond imagining. Such quantities can only be meaningfully addressed using more digital tools, and thus our relationship to information is fundamentally changed. This situation presents a particular challenge to processes of learning and teaching, and demands a response from both information professionals and educators. Enabling education in a digital environment means not only changing the form in which learning opportunities are offered, but also enabling students to survive and prosper in digitally based learning environments. This collection brings together a global community of educators, educational researchers, librarians and IT strategists, to consider how learners need to be equipped in an educational environment that is increasingly suffused with digital technology.

Traditional notions of literacy need to be challenged, and new literacies, including information literacy and IT literacy, need to be considered as foundation elements for digitally involved learners. Leading international experts from the USA, Canada, Australia, New Zealand, South Africa, Mexico and throughout Europe contribute to the debate, and Hannelore Rader, Librarian and Dean of the University Libraries, University of Louisville, Kentucky, provides the foreword. The book is in two parts: In Part 1, Literacies in the Digital Age, the contributors analyse how digital technologies have enabled transformative change in the ways in which learning can be constructed, and discuss the nature of the new literacies that have emerged in this new virtual and e-learning environment. In Part 2, Enabling and Supporting Digital Literacies, the contributors go on to consider the ways in which digital literacies can be made available to learners, and how these literacies are being relocated in a more student-centred environment within the broader perspective of learning. Readership: This book takes the issues raised in the successful Information and IT Literacy, also co-edited by Allan Martin, into a broader context. It is essential reading for all information professionals and educators involved in developing strategies and practices for learning in a digital age.
