Do you believe: The companies whose equity capital you have invested in, follow prudent, scientific methods to enhance shareholders' wealth? The wealth managers and investment advisors you rely on for their expertise, truly understand financial markets? Think again! "...we do not yet have complete and generally accepted explanations for how financial markets function..." Said the 2013 Nobel Economic Sciences Prize Committee, based on more than five decades of research by several Nobel Laureates and others worldwide. This book, based on a breakthrough research by the author, explains in a simple language what goes wrong in corporate financial practice and education, that puts shareholders' wealth at serious risk.

Financial planning is a young industry. The International Association of Financial Planning—one of the predecessors to the Financial Planning Association—was formed less than forty years ago. But as the profession's first tier of advisers reaches maturity, the decisions that may be part of transition planning for their firms loom large. A sale? A partner buyout? A merger? No matter what the choice, its viability hinges on one critical issue—the value of the firm. Unfortunately, many advisers—whether veteran or novice—simply don't know the worth of their practice or how to influence it. That's why How to Value, Buy, or Sell a Financial-Advisory Practice is such an important book. It takes advisers carefully through the logic and the legwork of coming to a true assessment of the value of their most important personal assets—their business. Renowned for their years of experience helping advisers tackle the daunting challenges related to the valuation, sale, and purchase of advisory firms, Mark C. Tibergien and Owen Dahl offer guidance that's essential and solutions that work.

The Sketch

The Central Bank of Sri Lanka (CBSL) celebrates its 70th Anniversary on 28 August 2020. The establishment of the CBSL was a proud moment in the post-independence history of Sri Lanka. The Bank, as the apex financial authority in the country, is entrusted with the mandates of maintaining economic and price stability and financial system stability. These two objectives are complementary to each other and they affect all sectors of the economy. Central banks worldwide were called upon to be risk managers during the Global Financial Crisis (GFC) of 2007-09, followed by the Great Recession. Quantitative Easing, which fast-tracked implementation of lender of last resort policies and overhauling financial regulatory regimes were some of the key measures executed by central banks in response to the said crisis. While financial systems and economies were struggling to restore stability, and wipe off the scars of GFC, there came COVID-19 pandemic with devastating impacts on almost all sectors. Central banks have been required again to find solutions to COVID-19 induced instabilities. At this very special moment of CBSL's 70th Anniversary, this article is dedicated to discussing challenges faced by central banks during this unprecedented crisis.

Investing with the Trend provides an abundance of evidence for adapting a rules-based approach to investing by offering something most avoid, and that is to answer the "why" one would do it this way. It explains the need to try to participate in the good markets and avoid the bad markets, with cash being considered an asset class. The book is in three primary sections and tries to leave no stone unturned in offering almost 40 years of experience in the markets. Part I – The focus is on much of the misinformation in modern finance, the inappropriate use of Gaussian statistics, the faulty assumptions with Modern Portfolio Theory, and a host of other examples. The author attempts to explain each and offer justification for his often strong opinions. Part II – After a lead chapter on the merits of technical analysis, the author offers detailed research into trend analysis, showing how to identify if a market is trending or not and how to measure it. Further research involves the concept of Drawdown, which the author adamantly states is a better measure of investor risk than the oft used and terribly wrong use of volatility as determined by standard deviation. Part III – This is where he puts it all together and shows the reader all of the steps and details on how to create a rules-based trend following investment strategy. A solid disciplined strategy consists of three parts, a measure of what the market is actually doing, a set of rules and guidelines to tell you how to invest based upon that measurement, and the discipline to follow the strategy
