Friedrich Kittler's lecture series provides a

concise history of optical media from Renaissance linear perspective to late twentieth-century computer graphics. He begins by looking at European painting since the Renaissance in order to discern the principles according to which modern optical perception was organised. Kittler also discusses the development of various mechanical devices, like the camera obscura and the laterna magica, which were closely connected to the printing press and which played a pivotal role in the media war

between the Reformation and the Counterreformation. After examining this history, Kittler then addresses the ways in which images were first stored and made to move through the development of photography and film. Kittler discusses the competitive relationship between photography and painting as well as between film and theater, as innovations like the Baroque proscenium or "picture-frame" stage evolved from elements that would later constitute cinema. The central question,

however, is the impact of film on the ancient monopoly of writing, as it not only provoked new forms of competition for novelists but also fundamentally altered the status of books. In the final section, Kittler examines the development of electrical telecommunications and electronic image processing from television to computer simulations. In short, these lectures provide a comprehensive introduction to the history of image production, which is indispensable for anyone wishing to understand the prevailing

In recent years, environmental and human rights advocates have suggested that we have entered the first new geological epoch since the end of the ice age: the Anthropocene. In this new epoch, humans have come to reshape

unwittingly both the climate and natural world; humankind has caused mass extinctions of plant and animal species, polluted the oceans, and irreversibly altered the atmosphere. Ironically, our efforts to make the planet more hospitable to ourselves seem to be driving us toward our inevitable extinction. A force of nature, humanity is now decentered as the agent of history. As Jennifer Fay argues, this new situation is to geological science what cinema has always been to human culture. Film, like the

Anthropocene, is a product of the industrial revolution, but arises out of a desire to preserve life and master time and space. It also calls for the creation of artificial worlds, unnatural weather, and deadly environments for entertainment, scientific study, and devising military strategy. Filmmaking stages, quite literally, the process by which worlds and weather come into being and meaning, and it mimics the forces that are driving this new planetary inhospitality. Cinema, in other words, provides an image of "nature" in the

age of its mechanical reproducibility. Fay argues that cinema exemplifies the philosophical, political, and perhaps even logistical processes by which we can adapt to these forces and also imagine a world without humans in it. Whereas standard ecological criticism attends to the environmental crisis as an unraveling of our natural state, this book looks to film (from Buster Keaton, to Jia Zhangke, to films of atomic testing and early polar exploration) to consider how it reflects upon the creation and destruction of human

environments. What are the implications of ecological inhospitality? What role might cinema and media theory play in challenging our presumed right to occupy and populate the world? As an art form, film enjoys a unique relationship to the material, elemental world it captures and produces. Through it, we may appreciate the ambitions to design an unhomely planet that may no longer accommodate us.

This pioneering book in elite athlete wellbeing brings together the narratives of athletes and wellbeing practitioners in high-performance sport with cutting-edge theorizing from world-leading academics to explore pertinent mental wellbeing matters that present for elite athletes both during and after their careers. The journey of the elite athlete is considered from entering the high-performance system as a youth performer through to retirement, with contributions illuminating the ways in which mental wellbeing can be impacted – both negatively and positively – through

common place experiences. Methods of creating holistic high-performance sports cultures along with common mental wellbeing influencers, such as parents, education, faith, injury and (de)selection are explored, as well as the ramifications of uncommon events on mental wellbeing, such as whistleblowing, legal disputes, psychological disorders and COVID-19. Drawing on this analysis, the book then proffers thought-provoking strategies for how the mental wellbeing of both athletes and staff can be understood, developed and supported, ultimately driving elite sport cultural transformation to put the person first and the

athlete second. Each chapter presents the wellbeing experience from the vantage of the athlete or the wellbeing practitioner, followed by an academic unpacking of the situation. This makes the book a must read for students and researchers working in sport coaching, sport psychology, applied sport science or sport management, as well as practitioners interested in facilitating a duty of care for high performing athletes, and working in coaching, sport science support, athlete development programs, NGB policy and administration or welfare services. This market-leading text emphasizes the prevention

and management of athletic injuries and remains the only text to cover all aspects of the profession of athletic training. It is a valuable resource in seeking professional certification. The text provides practical, career-oriented content for students in athletic training, sports medicine, physical education, physical therapy, and coaching.

The case studies in this book use authentic injury assessment examples to help readers link theory and clinical practice with the goal of becoming competent clinicians. The situations are realistic and present more than 130 of the injuries that athletic trainers

may encounter in the real world. The questions that accompany the cases ask readers to identify clinical and differential diagnoses, critique the evaluating clinician's actions, recommend treatment, comment on ethical choices, and make many of the decisions they will face in the field. The cases encourage readers to think and problem solve; evidence-based answers (for select cases in the text and for all cases in the instructor's manual) ensure that the recommended clinical decisions are based on the best available research, clinical expertise, and patient preferences rather than on anecdotal practice.
