

As Level Chemistry Ocr B Salters Complete Revision Practice

Exam Board: OCR Level: AS/A-level Subject: Chemistry First Teaching: September 2015 First Exam: Summer 2016 Written by experienced author Mike Smith, this Student Guide for Chemistry: - Helps identify what you need to know with a concise summary of the topics examined in the AS and A-level specifications - Consolidates understanding with tips and knowledge check questions - Provides opportunities to improve exam technique with sample answers to exam-style questions - Develops independent learning and research skills - Provides the content for generating individual revision notes

Help students pull together the chemical ideas in the course and apply them to fresh contexts in exam questions.

Written by the University of York project team for Salters Advanced Chemistry, this Student Book supports and extends students through the new linear course while delivering the breadth, depth, and skills needed to succeed in the new A Levels and beyond. It develops true subject knowledge while also developing essential exam skills. The fourth edition combines the Chemical Storyline and Chemical Ideas into a single, integrated volume for the first time, providing ideal support for the new specification.

A Level Advancing Physics for OCR Student Book

A Level Chemistry a for OCR Student Book

Written by curriculum and specification experts, this Student Book supports and extends students through the new linear course whilst delivering the breadth, depth, and skills needed to succeed in the new A Levels and beyond.

Fully revised and updated content matching new Cambridge International Examinations 9701 syllabus for first examination in 2016. Endorsed by Cambridge International Examinations, this digital edition comprehensively covers all the knowledge and skills students need during the A Level Chemistry course (9701), for first examination in 2016, in a reflowable format, adapting to any screen size or device. Written by renowned experts in Chemistry teaching, the text is written in an accessible style with international learners in mind. Self-assessment questions allow learners to track their progress, and exam-style questions help learners to prepare thoroughly for their examinations. Answers to all the questions from within the Coursebook are provided.

Written by curriculum and specification experts, this Student Book supports and extends students through the new linear course while delivering the breadth, depth, and skills needed to succeed in the new A Levels and beyond. It develops true subject knowledge while also developing essential exam skills.

Exam board: OCR Level: A-level Subject: Mathematics First teaching: September 2017 First exams: Summer 2019 Benefit from the expert input of experienced examiners and subject specialists including Heather Davis in this assessment-led Practice Book; tailored to the new 2017 specifications and packed with exam-style questions. - Thoroughly prepare your students for the exam with over 200 exam-style questions that are matched to the new specifications. - Provide structured support and extra practice with questions focused on problem-solving, modelling and technology. - Create opportunities for self-directed learning and assessment with answers at the back of the book, plus full step-by-step worked solutions and mark schemes supplied online. - Enhance learning with extra practice designed to supplement the textbooks and the My Revision Notes series.

Student Unit Guides are perfect for revision. The Practical Chemistry section deals with experimental results and practical techniques, explaining how to obtain and record results and how to process them. The Practical Units section describes the skills required for choosing and planning your investigation and the skills required. The Appendix contains some useful theory and the Answers section provides answers to the questions that are set throughout the guide. Please note this title is suitable for any student studying: Exam Board: OCR Level: A Level Year 2 Subject: Chemistry First teaching: September 2015 First exams: June 2017 Written by curriculum and specification experts in partnership with OCR, this Student Book supports and extends students through the new course while delivering the breadth, depth, and skills needed to succeed in the new A Level and beyond. It develops true subject knowledge while also developing essential exam skills. Covers the second year worth of content required for the new OCR Chemistry A A Level specification.

Ensure your students get to grips with the core practicals and develop the skills needed to succeed with an in-depth assessment-driven and reinforces understanding; clear summaries of practical work with sample questions and answers help to improve exam technique in higher grades. Written by experienced teacher Nora Henry, this Student Guide for practical Chemistry: - Help students easily identify what to know with a concise summary of required practical work examined in the A-level specifications. - Consolidate understanding of practical methodology, mathematical and other skills out of the laboratory with exam tips and knowledge check questions, with answers in the book. Provide plenty of opportunities for students to improve exam technique with sample answers, examiners tips and exam-style questions beyond the Student books with coverage of methodologies and generic practical skills not focused on in the textbooks.

New and updated resources tailored to the 2015 Advancing Physics specification. With new accessible format and features throughout retain the ethos of Advancing Physics while providing full support for the new linear qualification. This Student Book contains two years and covers the full A Level qualification.

Written by curriculum and specification experts, this Student Book supports and extends students through the new course while delivering depth, and skills needed to succeed in the new AS and beyond. It develops true subject knowledge while also developing essential exam skills. Cambridge International AS and A Level Chemistry Coursebook with CD-ROM

Please note this title is suitable for any student studying: Exam Board: AQA Level: A Level Subject: Biology First teaching: September 2015 First exams: June 2017 Fully revised and updated for the new linear qualification, written and checked by curriculum and specification experts, this Student Book supports and extends students through the new course whilst delivering the maths, practical and synoptic skills needed to succeed in the new A Levels and beyond. The book uses clear straightforward explanations to develop true subject knowledge and allow students to link ideas together while developing essential exam skills.

The OCR A Level Chemistry A Revision Guide provides comprehensive, specification-matched content, packed with engaging revision and practice material to keep you focused. It also contains a wealth of exam-style questions to test your knowledge and skills to help you fully prepare for the exams.

Tired of writing your own revision notes? Unsure what to put in and what to leave out? Use professional ones! These condensed revision notes (flashcards) are designed to facilitate memorization. They have been created by a very experienced, professional Chemistry tutor. Dr C. Boes has successfully taught over fifty A-level students in the last ten years. Many of these have achieved excellent grades in their exams and went on to study medicine. These notes contain all the necessary exam knowledge in a short, easy to memorize form. Each page covers the key facts, such as definitions or equations, of a single topic, without the distraction of unnecessary information. Knowing them by heart makes it easy to get top grades. Tried, tested and proven by past tuition students, they are an effective and successful tool to prepare for exams. They have been adapted to the new OCR B (Salters) Chemistry A-level Year 1 & AS syllabus (from Sept 15). This book is organized in chapters according to the syllabus and allows natural progression in sync with your school work. Created with great care, it includes important information specific to exam questions. The low price offers great value and gives many students the opportunity to experience its benefits. This small book will save you hours of painstaking note writing. It is less messy than loose paper sheets and easy to carry around. Memorize on the bus or while you wait. Try it now!

Stress tests are used in risk management by banks in order to determine how certain crisis scenarios would affect the value of their portfolios, and by public authorities for financial stability purposes. Until the first half of 2007, interest in stress-testing was largely restricted to practitioners. Since then, the global financial system has been hit by deep turbulences, including the fallout from sub-prime mortgage lending. Many observers have pointed out that the severity of the crisis has been largely due to its unexpected nature and have claimed that a more extensive use of stress-testing methodologies would have helped to alleviate the repercussions of the crisis. This book analyses the theoretical underpinnings, as well as the practical aspects, of applying such methodologies. Building on the experience gained by the economists of many national and international financial authorities, it provides an updated toolkit for both practitioners and academics.

Organic Sulfur Compounds, Volume I deals with the chemistry of organic sulfur compounds such as disulfides, polysulfides, olefins, acetylenes, and chloroethylenes. Topics covered range from the inorganic acids of sulfur and the thermodynamics of organic sulfur compounds to some applications of isotopic sulfur and the stereochemistry of disulfides and polysulfides. The mechanism of oxidation of thiols to disulfides is also discussed. Comprised of 40 chapters, this volume first considers the precise structures of elemental sulfur in relation to the reactions of sulfur compounds, followed by an analysis of the inorganic acids of sulfur. The reader is then introduced to the thermodynamics of organic sulfur compounds and the bonding characteristics of the sulfur atom, as well as the infrared spectra of organosulfur compounds. Subsequent chapters focus on the ionic scission of the sulfur-sulfur bond; nucleophilic reactions of thiols with acetylene and chloroethylene; reactions of sulfur with olefins; and the chemistry of isothiocyanates. This book should prove useful to advanced students, practitioners, and research workers in the field of organic chemistry.
