and the US government attempt to open emerging markets in economic distress and acquire valuable industrial and financial assets. Focusing particularly on Korea and Thailand, the author examines the degree of market opening, the roles US actors played in this process and the level of foreign firm activity in the years after the Asian crisis. Justin Robertson finds surprisingly little coherence between the strategies of US firms and US policy-makers. At the same time, the book downplays European investments, concluding instead that the decade since the Asian crisis has reaffirmed strengths of US capital, particularly in some of the most important sectors of the global economy. Investment banking, private equity and subcontracting are significant new features of US-Asia economic relations. Providing a sophisticated understanding of US interests in Asia, especially in terms of the politics of finance capital, and including a wealth of empirical data on the US and Asian political economies, this book will be invaluable for students and scholars of international political economy and Asian economics and politics.

This timely book examines how the countries of East Asia coped with the vast pool of international capital that flowed into the region during the early 1990s. East Asia appeared to be doing well. But, as this book was in preparation in 1997, a currency crisis sent capital fleeing and catapulted the East Asian economies into turmoil. Country-specific updates describe events since July 1997, how government authorities addressed the crisis, and what lessons can be learned.

Issues for include Australia and New Zealand.
