'Pathways to Astronomy' breaks down introductory astronomy into its component parts. The huge and fascinating field of astronomy is divided into 86 units. These units are woven together to flow naturally for the person who wants to read the text like a book, but it is also possible to assign them in different orders, or skip certain units altogether. Professors can customise the units to fit their course needs.

This supplement contains observation and research projects authored by Steve McMillan, as well as projects for the Starry Night Pro™ planetarium software by Erin O'Connor (Santa Barbara City College).

Media Manager for Astronomy Today, 6th Ed. by Chaisson/McMillan

Astronomy: Journey to the Cosmic Frontier

This new revision of a standard work gives a general but comprehensive introduction to positional astronomy. Useful for researchers as well as undergraduates.

A textbook that is not written like a textbook.

Astronomy is written in clear non-technical language, with the occasional touch of humor and a wide range of clarifying illustrations. It has many analogies drawn from everyday life to help non-science majors appreciate, on their own terms, what our modern exploration of the universe is revealing. The book can be used for either a one-semester or two-semester introductory course (bear in mind, you can customize your version and include only those chapters or sections you will be teaching.) It is made available free of charge in electronic form (and low cost in printed form) to students around the world. If you have ever thrown up your hands in despair over the spiraling cost of astronomy textbooks, you owe your students a good look at this one. Coverage and Scope

Astronomy was written, updated, and reviewed by a broad range of astronomers and astronomy educators in a strong community effort. It is designed to meet scope and sequence requirements of introductory astronomy courses nationwide. This was one of the 6 science fiction stories published in the first issue (April 1926) of the first magazine devoted to science fiction, *Amazing Stories*, edited and published by Hugo Gernsback, now considered to be the father of the science fiction genre. He described this story in an inset panel: "In 'Alice in the Looking Glass', the beautiful play of fancy which gave immortal fame to a logician and mathematician, we read of the mysterious change in size of the heroine, the charming little Alice. It tells how she grew large and small according to what she ate. But here we have increase in size pushed to its utmost limit. Here we have treated the growth of a man to cosmic dimensions. And we are told of his strange sensation and are led up to a sudden startling and impressive conclusion, and are taken through the picture of his emotions and despair." The reader with even the most basic knowledge of science will find this story flawed, incredible, perhaps ludicrous. But, after all, it's fiction, more fantasy than science. Suspend your disbelief and let the story carry you where it will, across space and time, to love.

This workbook has three main purposes. The first of which is, of course, to improve handwriting skills. This involves the strengthening of the tiny hand muscles for better grip and control. The second purpose is to encourage reading of written texts.

And the third purpose is to improve your child's understanding of the Bible by reading and writing.

A child's dream takes us on a journey through space. The child looks for a place to land while exploring each planet, but some are too hot, some are too cold, and some are just made of liquid and gas. Only planet Earth is just right. Fun rhyming text introduces children to each planet and basic facts about it. The text is accompanied by stunning images of a rocket traveling through the solar system, interspersed by close up images of each planet in order. While each planet is amazing in its own way, there is only one we can call home. If parents choose, this can be the start to a conversation about how we can take better care of our planet. Visit lorifettner.wordpress.com/no-place-like-earth/ to see sample pages from the interior.

Is it true that Black Holes suck everything that comes near it? It's time to learn the truths and the myths behind these mysterious giants in outer space. It's interesting to know that even if our scientists only know a portion of the truth about Black Holes, it's still enough to give you a glimpse of the universe. Grab a copy now!

This 6th edition of "Tools of Radio Astronomy", the most used introductory text in radio astronomy, has been revised to reflect the current state of this important branch of astronomy. This includes the use of satellites, low radio frequencies, the millimeter/sub-mm universe, the Cosmic Microwave Background and the increased importance of mm/sub-mm dust emission. Several derivations and presentations of technical aspects of radio astronomy and receivers, such as receiver noise, the Hertz dipole and beam forming have been updated, expanded, re-worked or complemented by alternative derivations. These reflect advances in technology. The wider bandwidths of the Jansky-VLA and long wave arrays such as LOFAR and mm/sub-mm arrays such as ALMA required an expansion of the discussion of interferometers and aperture synthesis. Developments in data reduction algorithms have been included. As a result of the large amount of data collected in the past 20 years, the discussion of solar system radio astronomy, dust emission, and radio supernovae has been revisited. The chapters on spectral line emission have been updated to cover measurements of the neutral hydrogen radiation from the early universe as well as measurements with new facilities. Similarly the discussion of molecules in interstellar space has been expanded to include the molecular and dust emission from protostars and very cold regions. Several worked examples have been added in the areas of fundamental physics, such as pulsars. Both students and practicing astronomers will appreciate this new up-to-date edition of Tools of Radio Astronomy.

"Say Not What If" is a nearly 10,000 word story written as a long rhyming poem. It is about a man on death row, and has as its theme the concept that time is our most valuable commodity. As someone once said, "waste anything but time, because we really are promised no tomorrows." This theme is explored through the life of a man who sacrifices his marriage and everything else for his career. He realizes much too late the terrible consequences of this decision, and then desperately tries to regain those lost years by making a much worse choice. The resolution of this latter choice involves an additional examination of the concepts of accountability and responsibility, redemption, and the morality of the death penalty. The story has a better than average rating of 4/5 stars on Goodreads and Amazon. There are currently fifty-six ratings and forty-one written reviews on Goodreads at <http://www.goodreads.com/book/show/12788920-say-not-what-if>. Another thirteen ratings and reviews are on Amazon. Reviewers have described the story as "exceptional," "amazing," "incredibly special," "borderline genius," "a lyrical masterpiece," "gripping and compelling," "thought provoking," and a "beautifully written piece of literature." Many enjoyed the story so much that they intend to share it with their family and friends. I have never seen a story written in this format. It has characters and dialogue just like a regular story, and is extremely easy to read and understand, regardless of whether you have a GED or a PHD. You should therefore not be concerned that the format makes the story hard to understand. Many reviewers had the same initial concern, but then pleasantly discovered that the story is very easy to follow. But you can further allay any such fears by reading the first few pages of the story on my website, www.ascensionenterprise.com. This story will tear at your soul. As many of the reviewers said, it only requires an hour or so to read, but will keep you thinking about its message long after you are finished. Time is quintessentially important and valuable. Who knows how much time anyone has? Would you trade ten or even five years of your life for a million dollars? The story can be purchased from many booksellers, including Amazon and Barnes & Noble. It can also be purchased for only 0.99 as an ebook for Kindle. Best wishes and good luck in all your reading endeavors.

A nomadic swordsman joins a band of misfits and magicians on a rescue mission, only to face an enemy that threatens their very place in the world. Before history was recorded in stone and ink, some men wrote it in blood. Wolfskin, a nomadic warrior, hopes to find a new purpose in life after the accidental slaughter of his own tribe while in the throes of an uncontrollable berserker rage. Hired as a guide and swordsman for a rescue mission to the volcanic ice plains, he travels north with a band of misfits and magicians whose skills and ideology is perched between prehistory and the advent of technology. What dreadful enemy will they face on the outskirts

of civilization, and will Wolfskin even have a place in the world should he slay it? A new heroic legend from the darkest corridors of time, as chronicled by long-time collaborators Warren Ellis and Mike Wolfer (GRAVEL).

The art and traditions of Aboriginal Australia draw on 40,000 years experience of gazing into the richness of unpolluted skies from pristine lands. They include the "emu in the sky" constellation of dark clouds, and stories about the Sun, Moon, and the Seven Sisters. Several Aboriginal groups use the rising and setting of particular stars to show when to harvest a food source. Some explain how the tides are caused by the Moon, and even explain eclipses as a conjunction of the Sun and Moon. This book explores the mystical Aboriginal astronomical stories and traditions, and the way in which they are used for practical applications such as navigation and harvesting. It describes the journey of exploration that's currently opening Western eyes to this treasury of ancient Aboriginal knowledge, and is written by two active researchers in the field: Prof. Ray Norris (an astrophysicist with CSIRO, and an Adjunct Professor at the Dept. of Indigenous Studies, Macquarie University), and his wife Cilla. In this book, Ray and Cilla bring you the results of their 6-year quest to research Aboriginal Astronomy, including: * uncovering little-known manuscripts, * visiting Aboriginal sites throughout Australia, * writing down stories from ancient communities. Few outsiders understand the depth and complexity of Aboriginal cultures. This book will give you a glimpse that will change your ideas about Aboriginal society.

The International Space Station (ISS) is a great international, technological, and political achievement. It is the latest step in humankind's quest to explore and live in space. The research done on the ISS may advance our knowledge in various areas of science, enable us to improve life on this planet, and give us the experience and increased understanding that can eventually equip us to journey to other worlds. As a result of the Station's complexity, few understand its configuration, its design and component systems, or the complex operations required in its construction and operation. This book provides high-level insight into the ISS. The ISS is in orbit today, operating with a crew of three. Its assembly will continue through 2010. As the ISS grows, its capabilities will increase, thus requiring a larger crew. Currently, 16 countries are involved in this venture. The sophisticated

procedures required in the Station's construction and operation are presented in Amazing 3D Graphics generated by NASA 104 pages of spectacularly detailed color graphics the Space Station as you've never seen it before!
