Nuclear Thermal-Hydraulic Systems provides a comprehensive approach to nuclear reactor thermal-hydraulics, reflecting the latest technologies, reactor designs, and safety considerations. The text makes extensive use of color images, internet links, computer graphics, and other innovative techniques to explore nuclear power plant design and operation. Key fluid mechanics, heat transfer, and nuclear engineering concepts are carefully explained, and supported with worked examples, tables, and graphics. Intended for use in one or two semester courses, the text is suitable for both undergraduate and graduate students. A complete Solutions Manual is available for professors adopting the text. This must-have workbook helps students learn the prioritization and delegation skills needed to survive nursing school, pass the NCLEX-RN® examination, and make the transition to practice in today's healthcare environment. Consisting of three parts plus an answer key, this resource provides numerous opportunities for students to review cases and answer questions similar to those they will see on the NCLEX-RN examination - including questions in alternate-item formats . Part 1, written by delegation expert Ruth Hansten, is an introduction that provides a practical review of clinical delegation skills and serves as a framework for the exercises that follow. Part 2 consists cases of patients who have relatively straightforward health problems followed by NCLEX examination-style questions focusing on prioritization, delegation, and assignment. Part 3 consists of complex, unfolding cases involving patients who have multiple health conditions, as well as complex patient assignments. An introduction by prioritization and delegation expert Ruth Hansten explains the importance of developing sound clinical skills and judgment in the areas of prioritization, delegation, and assignment. NCLEX-style questions help students develop fundamental skills in prioritization, delegation, and assignment and become familiar with the NCLEX examination format. Questions in Parts 2 and 3 are organized by body system and by complexity, respectively, to allow for easy use with any medical-surgical nursing text. Both sections of exercises give students essential hands-on practice in prioritizing (deciding what to do first), delegating (giving specific tasks to assistive personnel and supervising satisfactory completion of those tasks), and assignment (giving responsibility for the overall care of particular patients to appropriate personnel). The questions in Part 3 are more complex than those in Part 2, allowing students to master core concepts using unambiguous cases before applying this knowledge to patients with more complicated, multidimensional case presentations. Flexible organization allows the workbook to be used with any Elsevier medical-surgical nursing text. The answer key provides rationales for correct as well as incorrect answers, reinforcing the concepts presented in each unit. Questions follow NCLEX style, and about 10% represent the new alternate-item question format. The workbook is three-hole punched and perforated for convenience.

Nursing Care Guidelines highlight information (including background, procedural concerns, documentation concerns, and evidence-based practice) and resources to reduce risk and ensure safety for the patient and nurse. Diverse mix of clinically focused boxes are incorporated throughout each chapter. Collaboration and Delegation boxes stress the importance of effective and accurate communication between the healthcare team about a patient's condition and treatment, as well as the importance of assigning tasks appropriately. Ethical, Legal, and Professional Practice boxes address ethical and legal dilemmas commonly faced in nursing to prepare readers to act in a professional and nonjudgmental manner while protecting patient rights. Patient Education and Health Literacy boxes stress the importance of patient education and how to deliver information in an understandable manner based on the patient's level of health literacy. Health Assessment Questions boxes illustrate how to properly ask and use assessment questions while interviewing patients. Diversity Considerations boxes prepare readers to care for and communicate with patients of diverse ages, gender, cultural, ethnic, and religious backgrounds as well as various disability and morphological characteristics. Evidence-Based Practice and Informatics boxes provide current research and resources that, combined with clinical expertise, will contribute to improved patient care outcomes. Home Care Consideration boxes highlight issues that pertain specifically to nursing practice in the non-acute care setting. Safe Practice Alert! boxes underscore significant patient safety concerns while providing information to insure both patient and nurse safety. QSEN Focus! boxes illustrate application of the six Quality and Safety Education for Nurses (QSEN) competencies for pre-licensure nursing students: patient-centered care, teamwork and collaboration, evidence-based practice, quality improvement, safety, and informatics. Five-step nursing process framework is integrated throughout the text and in the clinical skills chapters. Care planning table in each clinical chapter highlights the first nursing diagnosis discussed in the chapter and connects it to the Nursing Outcomes Classification (NOC) and the Nursing Interventions Classification (NIC).
