This atlas presents a concrete tool to identify xylophagous activity by the remains they left in wooded areas in Western Europe. Xylophagous insects are among the largest predators of woody tissues. They leave discriminating traces, different for each species according to their bioecology, and so it is necessary to know how to recognize and characterize them. The book is a practical tool to help identify and interpret them through a standardized presentation of the most ubiquitous families and a key to their determination. It presents descriptions of the galleries and of morphometry of the faecal pellets based on macroscopic features for xylophagous identification, and includes information about the origin and distribution of the xylophagous biological cycles, bioclimatic conditions and bioecology, and the type of woods that are attacked. The book will be a useful guide for forest managers, heritage conservationists, environmental engineers, bioarchaeologists, entomologists, loggers, and wood anatomists.

Trauma is a leading cause of death and disability around the world, and the leading cause of death in those aged under forty-five years. Conditions such as airway obstruction, hemorrhage, pneumothorax, tamponade, bowel rupture, vascular injury, and pelvic fracture can cause death if not appropriately diagnosed and managed. This essential book provides emergency physicians with an easy-to-use reference and source for traumatic injury evaluation and management in the Emergency Department. It covers approaches to common, life-threatening, and traumatic diseases in the Emergency Department, for use on shift and as a reference for further learning. Each chapter includes a succinct overview of common traumatic injuries, with evaluation and management pearls and pitfalls. Highly illustrated with images from one of the busiest trauma centers in the US, and featuring expert contributions from a diverse set of attending physicians, this is an essential text for all emergency medicine practitioners.

workup protocols and common pitfalls. The Color Atlas of Emergency Trauma is an essential resource for those involved in trauma care. Text only. This product does NOT include a Resource Central Access Code Card. To purchase the text with a Resource Central Access Code Card, please use ISBN: 0-13-281811-6 For more than 30 years, International Trauma Life Support has been at the forefront of trauma education at all levels of emergency care worldwide. This practical, hands-on training offers a complete reference covering all skills necessary for rapid assessment, resuscitation, stabilization, and transportation of the trauma patient. Updated with new photos and the latest approaches to the care of the trauma patient, this seventh edition conforms to the most recent AHA/ILCOR guidelines for artificial ventilation and CPR. One night in early 1976, the world of trauma medicine changed forever in a frozen Nebraska field where Dr. James Styner crashed his small airplane with his wife and four children aboard. The experience of the eight hours he spent isolated and awaiting rescue that never came, his journey to the local hospital where he found inadequate care, and his family's evacuation and arrival at the sanctity of Lincoln General Hospital compelled him to develop a revolutionary new concept of emergency medical care. That night Advanced Trauma Life Support was born, and grew to become the standard of emergency trauma care throughout the world. Today it continues to save countless lives and it continues to grow. This is the story of ATLS and that tragic night for the Styner family, but it is also the story of the author's personal journey to find the truth about the accident that not only took the life of his mother, but nearly took his - and how doing so was one of the most important things he ever did.

PHTLS: Prehospital Trauma Life Support, Military Edition consists of the PHTLS core content and features thirteen chapters written by military prehospital trauma care experts for practitioners in the military environment. PHTLS: Prehospital Trauma Life Support, Military Edition is created in partnership between the National Association of Emergency Medical Technicians (NAEMT) and the Committee on Tactical Combat Casualty Care (C-TCCC). Since 1996, TCCC has improved the care rendered in combat prehospital environments. TCCC is the battlefield prehospital component of the Joint Trauma System, an organization within the United States Department of Defense that projects combat trauma care out to the point of injury and continues that care seamlessly while bringing the casualty home for recuperation and rehabilitation. TCCC guidelines are continuously revised and updated by C-TCCC, an all-volunteer group of military medicine and trauma care specialists. The membership of C-TCCC includes combat medics, corpsmen, and pararescuemen as well as physicians and physician assistants.

Encyclopedia of Trauma Care

*Unless dealing with injury regularly, few surgeons can attain and sustain the level of skill necessary for decision making in major trauma. This includes both the intellectual decisions and the manual dexterity required to perform all the manoeuvres needed for surgical access and control. These can be particularly challenging, and may be infrequently required, yet rapid access to and control of sites of haemorrhage following trauma can be life-saving surgical intervention. Many situations require specialist trauma expertise, yet often this is simply not on hand within the available time frame. Manual of Definitive Surgical Trauma Care, Second Edition, is written by the editorial board of the DSTCTM, which is a short course focusing on the life-saving surgical techniques and surgical decision-making required for surgeons who deal with major surgical trauma on an infrequent basis. This course supplements the well-recognized and accepted American College of Surgeons' Advanced Trauma Life Support (ATLS®) course. This manual is published in association with IATSIC (the International Association for the Surgery of Trauma and Surgical Intensive Care), and is written by an Editorial Board of surgeons who belong to that society. IATSIC are broadening their reach and running more and more courses worldwide. This new second edition has been updated to incorporate all recent developments in this rapidly progressing area. It emphasizes how practical 'real-life' decisions on the care of the injured patient should be made and then covers in practical terms the surgical techniques required. Every aspect of surgical trauma care is covered, including:*

- the causation of injuries - aids rapid understanding of presented trauma;*
- the initial, pre-hospital and emergency department care of the patient - all of which may determine eventual outcome;*
- the resources required, both physical and intellectual, within the hospital to deal with the specific problems associated with patients with multiple injuries; the limitations in providing specialist expertise within the time frame required. It is an ideal practical manual for both trainees and qualified surgeons.*

*Andean Structural Styles: A Seismic Atlas* is a comprehensive reference illustrating the variability in structural styles and hydrocarbon traps that exist in the Andean chain. The Andean chain, stretching over more than 5,000 km (3,000 mi) from Venezuela to Argentina, contains a large number of sedimentary basins which have developed in a wide range of tectonic settings. Some of these basins are highly mature, with hydrocarbon production from Paleozoic, Mesozoic, and Cenozoic sedimentary sequences, while others are still underexplored. *Andean Structural Styles: A Seismic Atlas* covers topics including fold types, thrust faults, triangle zones, inversion structures, synorogenic deposits, and growth stratal geometries. These topics are illustrated by thirty-two seismic examples interpreted and uninterpreted, covering most of the Andean basins, and five chapters reviewing the structural styles of the Andes, the complexity of processing seismic in these settings, how analogue models help in the interpretation, and several outcrop analogues. This reference is invaluable to both hydrocarbon exploration of the Andes and researchers and students in the fields of exploration geology and structural geology. Also, those teaching structural geology and seismic interpretation will find a valuable resource with lots of uninterpreted seismic examples that can be used in their lectures. Includes a vast collection of high-quality, color images Features case studies covering the entirety of the Andes Mountain chain Presents high-quality seismic data that was previously only available to oil companies

*The Golden Hour* is a well-established concept in emergency medicine, related to the critical period of one hour after an injury, accident or trauma. This term implies that the mortality rates increase substantially if efficient care is not provided within 60 minutes after the trauma. This book is intended as a practical manual in Trauma Care within the context of the golden hour, addressing all trauma types and all body parts. Readers will find essential decision-making algorithms and protocols with commentary for traumas, along with easily accessible information on how to treat patients in a very practical and handy fashion. Furthermore, the content is presented in a didactic way suitable for a wide audience, from medical students who want to learn about the basics of trauma care to experienced surgeons seeking a comprehensive guide to trauma-related interventions. The book combines contributions from experts at two renowned Trauma Centers, the Hospital do Trabalhador at Curitiba, Brazil, and the Ryder Trauma Center in Miami, USA. Therefore, considering the different local environments and resources, the book provides distinct perspectives for several injuries, presenting the state of the art in Trauma Care. The diversity of perspectives in this book contributes to a global health care approach suitable for trauma-related events from developed countries to remote areas. The *Trauma Golden Hour - A Practical Guide* celebrates the Centennial Anniversary of the Federal University of Parana (Brazil), the 25th Anniversary of the Ryder Trauma Center (USA) and the 20th Anniversary of the Hospital do Trabalhador (Brazil).

**In Atlas of a Lost World, Craig Childs upends our notions of where these people came from and who they were. How they got here, persevered, and ultimately thrived is a story that resonates from the Pleistocene to our modern era. The lower sea levels of the Ice Age exposed a vast land bridge between Asia and North America, but the land bridge was not the only way across. Different people arrived from different directions, and not all at the same time. The first explorers of the New World were few, their encampments fleeting. The continent they reached had no people but was inhabited by megafauna-mastodons, giant bears, mammoths, saber-toothed cats, five-hundred-pound panthers, enormous bison, and sloths that stood one story tall. The first people were hunters-Paleolithic spear points are still encrusted with the proteins of their prey-but they were wildly outnumbered and many would themselves have been prey to the much larger animals. Atlas of a Lost World chronicles the last millennia of the Ice Age, the violent oscillations and retreat of glaciers, the clues and traces that document the first encounters of early humans, and the animals whose presence governed the humans' chances for survival. A blend of science and personal narrative reveals how much has changed since the time of mammoth hunters, and how little. Across unexplored landscapes yet to be peopled, readers will see the Ice Age, and their own age, in a whole new light.**

Now in a revised and expanded second edition, this unique text discusses the opportunities and challenges to the practice of orthopedic surgery in resource-limited environments around the world. Sensibly divided into thematic sections, part I examines barriers to care, from the poorly recognized global burden of orthopedic conditions and the less than ideal equipment to the cultural considerations and ethical dilemmas inherent in such situations. General clinical topics are covered in part II, such as non-surgical approaches and anesthesia, while the remaining sections discuss adult and pediatric trauma, presented in an anatomical format for easy reference with a focus on the natural history and the best treatment methods within existing limitations, followed by musculoskeletal infections, non-infectious pediatric conditions, reconstruction, and amputations. Topics new to this edition include the management of non-unions by induced membrane techniques, autologous bone grafting, bone growth and burn charts, the management of neck and back pain, and principles of orthopedic rehabilitation. Written and edited by experts with years of experience working in austere settings, this second edition of Global Orthopedics is a seamless transition from the original and expands the range of possible management strategies in places desperate for orthopedic care, making it a must for all surgeons and practitioners planning to work in such challenging settings.

'I promised that I would one day write a book and tell the world about the home for unmarried mothers. I have at last kept my promise.' In Ireland, 1951, the young June Goulding took up a position as midwife in a home for unmarried mothers run by the Sacred Heart nuns. What she witnessed there was to haunt her for the next fifty years. It was a place of secrets, lies and cruelty. A place where women picked grass by hand and tarred roads whilst heavily pregnant. Where they were denied any contact with the outside world; denied basic medical treatment and abused for their 'sins'; where, after the birth, they were forced into hard labour in the convent for three years. But worst of all was that the young women were expected to raise their babies during these three years so that they could then be sold - given up for adoption in exchange for a donation to the nuns. Shocked by the nuns' inhumane treatment of the frightened young women, June risked her job to bring some light into their dark lives. June's

Peopled by larger-than-life heroes and villains, charged with towering questions of good and evil, Atlas Shrugged is Ayn Rand's magnum opus: a philosophical revolution told in the form of an action thriller—nominated as one of America's best-loved novels by PBS's The Great American Read. Who is John Galt? When he says that he will stop the motor of the world, is he a destroyer or a liberator? Why does he have to fight his battles not against his enemies but against those who need him most? Why does he fight his hardest battle against the woman he loves? You will know the answer to these questions when you discover the reason behind the baffling events that play havoc with the lives of the amazing men and women in this book. You will discover why a productive genius becomes a worthless playboy...why a great steel industrialist is working for his own destruction...why a composer gives up his career on the night of his triumph...why a beautiful woman who runs a transcontinental railroad falls in love with the man she has sworn to kill. Atlas Shrugged, a modern classic and Rand's most extensive statement of Objectivism—her groundbreaking philosophy—offers the reader the spectacle of human greatness, depicted with all the poetry and

power of one of the twentieth century's leading artists.

***#1 NEW YORK TIMES BESTSELLER • In her latest book, Brené Brown writes, "If we want to find the way back to ourselves and one another, we need language and the grounded confidence to both tell our stories and be stewards of the stories that we hear. This is the framework for meaningful connection." In Atlas of the Heart, Brown takes us on a journey through eighty-seven of the emotions and experiences that define what it means to be human. As she maps the necessary skills and an actionable framework for meaningful connection, she gives us the language and tools to access a universe of new choices and second chances—a universe where we can share and steward the stories of our bravest and most heartbreaking moments with one another in a way that builds connection. Over the past two decades, Brown's extensive research into the experiences that make us who we are has shaped the cultural conversation and helped define what it means to be courageous with our lives. Atlas of the Heart draws on this research, as well as on Brown's singular skills as a storyteller, to show us how accurately naming an experience doesn't give the experience more power—it gives us the power of understanding, meaning, and choice. Brown shares, "I want this book to be an atlas for all of us, because I believe that, with an adventurous heart and the right maps, we can travel anywhere and never fear losing ourselves."***
