How can you effectively stand up for your values when pressured by your boss, customers, or shareholders to do the opposite? Drawing on actual business experiences as well as on social science research, Babson College business educator and consultant Mary Gentile challenges the assumptions about business ethics at companies and business schools. She gives business leaders, managers, and students the tools not just to recognize what is right, but also to ensure that the right things happen. The book is inspired by a program Gentile launched at the Aspen Institute with Yale School of Management, and now housed at Babson College, with pilot programs in over one hundred schools and organizations, including INSEAD and MIT Sloan School of Management. She explains why past attempts at preparing business leaders to act ethically too often failed, arguing that the issue isn't distinguishing what is right or wrong, but knowing how to act on your values despite opposing pressure. Through research-based advice, practical exercises, and scripts for handling a wide range of ethical dilemmas, Gentile empowers business leaders with the skills to voice and act on their values, and align their professional path with their principles. Giving Voice to Values is an engaging, innovative, and useful guide that is essential reading for anyone in business.

The report includes many estimates of the fatality- or injury-risk increase for aging a year, or the risk for a female relative to a male of the same age, given similar physical insults: by vehicle type, model year, seat position, types of occupant protection available, belt use, impact location, body region of the injury, or severity (AIS) of the injury. In addition, for the major occupant protection technologies – seat belts, air bags, and energy-absorbing materials – analysis methods of past NHTSA evaluations will show if fatality-reducing effectiveness is significantly different for younger and older occupants or for men and women. Finally, the report identifies specific injuries and injury sources (vehicle components contacted) that are prevalent among older or female occupants.
