*Autonomous vehicles have the potential to bring major improvements in highway safety. Motor vehicle crashes caused an estimated 37,133 fatalities in 2017; a study by the National Highway Traffic Safety Administration (NHTSA) has shown that 94% of crashes are due to human errors. For this reason, federal oversight of the testing and deployment of autonomous vehicles has been of considerable interest. The theory and service of modern automotive engines is at the heart of this new edition. It includes practical information on variable valve timing systems, hybrid and other advanced technology vehicles, plus more engine performance diagnostic information and current NATEF content.*
