

Austroads Guide To Road Design Part 3

"This guide represents the combined experience and international best practices of Austroad member agencies and industry experts in the area of geometric design of rural roads." -foreword.

Intersections and Crossings - General (AGRD04-17)

A Guide to the Geometric Design of Major Urban Roads

Roadside environment. Part 6B

Volume 3. Guide to Road Design : Queensland Practice

Volume 3. Guide to Road Design : Queensland Practice : Supplement to Austroads Guide to Road Design. Part 4. Intersections and Crossings : General

General : Road Planning and Design Manual. Volume 3. Guide to Road Design

Volume 3: Guide to Road Design includes the road design criteria and exceptions for Queensland Department of Transport and Main Roads practice. It informs designers of the relationship between criteria in the Road Planning and Design Manual (1st edition), the Austroads Guide to Road Design and other publications.

Guide to Road Design Part 6B

Supplement to Austroads Guide to Road Design Part 3: Geometric Design

"The 'Guide to road design -- Part 6A: pedestrian and cyclist paths' provides guidance for road designers and other practitioners on the design of paths for safe and efficient walking and cycling. The guide provides a brief introduction to planning and the need for a path, describes the types of path and covers the requirements of path users. However, the main focus of Part 6A is the geometric design of paths and related facilities ... Detailed guidance is provided on path location, alignment, width, clearances, crossfall, drainage and sight distance requirements."--Summary, preliminary p.

Paths for Walking and Cycling (AGRD06A-17)

Roadside design, safety and barriers

Road Planning and Design Manual : Volume 3. Guide to Road Design

"This major work provides guidelines for the geometric design of major urban roads and has been prepared by Austroads member agencies and industry experts to promote a common, standard approach to urban road design across Australia and New Zealand. Geometric road design guidelines are used as an aid to achieving consistent and operationally effective road designs. This guide represents the combined experience and international best practices of Austroads member agencies and industry experts in this area of geometric design. The result is an up-to-date coverage of Australian and New Zealand road design practice. Urban Road Design includes: definition of major urban roads; fundamental design considerations including performance requirements, traffic volumes and environmental considerations; design inputs such as speed and sight distance; geometric design guidelines for horizontal, vertical alignment, and cross section; other considerations such as intersections at grade, road safety and drainage and comprehensive glossary of terms. Urban Road Design is intended for use by general and local government practitioners working in road and traffic engineering and other related disciplines. Undergraduate and postgraduate students may also use it." - AustRoads website.

Undergraduate and postgraduate students may also use it." - AustRoads website.

Drainage - road surface, networks, basin and subsurface. Part 5A

Part 7: Geotechnical Investigation and Design

Design Considerations (AGRD02-15)

The Department of Transport and Main Roads has, in principle, agreed to adopt the standards published in the Austroads Guide to Road Design (2016) Part 3: Geometric Design. This supplement details additional requirements, including accepted with amendments (additions or differences), new or not accepted. It includes the road design criteria and exceptions for Queensland Department of Transport and Main Roads practice. It informs designers of the relationship between criteria in the Road Planning and Design Manual (1st edition), the Austroads Guide to Road Design and other publications.
