can provide important physiological insights for medical diagnosis and well-being management. Most traditional methods for measuring vital signs require a person to wear biomedical devices, such as a capnometer, a pulse oximeter, or an electrocardiogram sensor. These contact-based technologies are inconvenient, cumbersome, and uncomfortable to use. There is a compelling need for technologies that enable contact-free, easily deployable, and long-term monitoring of vital signs for healthcare. Contactless Vital Signs Monitoring presents a

young children has been added to nearly every chapter. Material has been added related to medical genetics (Chapter 6). The discussion of oncology (Chapter 12) has been expanded to include the current tumor classifications and therapies. The SLP's role with geriatric medicine has expanded in recent decades; thus, a chapter on rehabilitation medicine and geriatrics (Chapter 14) has been given greater attention as clinicians are increasingly participating in palliative care teams.
