The first book to teach physical assessment techniques based on evidence and clinical relevance. Grounded in an empirical approach to history-taking and physical assessment techniques, this text for healthcare clinicians and students focuses on patient well-being and health promotion. It is based on an analysis of current evidence, up-to-date guidelines, and best-practice recommendations. It underscores the evidence, acceptability, and clinical relevance behind physical assessment techniques. Evidence-Based Physical Examination offers the unique perspective of teaching both a holistic and a scientific approach to assessment. Chapters are consistently structured for ease of use and include anatomy and physiology, key history questions and considerations, physical examination, laboratory considerations, imaging considerations, evidence-based practice recommendations, and differential diagnoses related to normal and abnormal findings. Case studies, clinical pearls, and key takeaways aid retention, while abundant illustrations, photographic images, and videos demonstrate history-taking and assessment techniques. Instructor resources include PowerPoint slides, a test bank with multiple-choice questions and essay questions, and an image bank. This is the physical assessment text of the future. Key Features: Delivers the evidence, acceptability, and clinical relevance behind history-taking and assessment techniques Eschews "traditional" techniques that do not demonstrate evidence-based reliability Focuses on the most current clinical guidelines and recommendations from resources such as the U.S. Preventive Services Task Force Focuses on the use of modern technology for assessment Aids retention through case studies, clinical pearls, and key takeaways Demonstrates techniques with abundant illustrations, photographic images, and videos Includes robust instructor resources: PowerPoint slides, a test bank with multiple-choice questions and essay questions, and an image bank Purchase includes digital access for use on most mobile devices or computers

The American Association for the Surgery of Trauma is dedicated to the discovery, dissemination, implementation, and evaluation of knowledge related to acute care surgery (trauma, surgical critical care, and emergency general surgery) by fostering research, education, and professional development in an environment of fellowship and collegiality.

This book brings together results from different branches of computer science (in particular, artificial intelligence), medical informatics and medicine to examine cutting edge approaches to computer-based guideline modeling, verification and interpretation. Different methods have been developed to support the development, deployment, maintenance and use of evidence-based guidelines, using techniques from artificial intelligence, software engineering, medical informatics and formal methods. Such methods employ different representation formalisms and computational techniques. As the guideline-related research spans a wide range of research communities, a comprehensive integration of the results of these communities was lacking. It is the intention of this book to fill this gap. It is the first book of its kind that partially has the nature of a textbook. The book consists of two parts. The first part consists of nine chapters which together offer a comprehensive overview of the most important medical and computer-science aspects of clinical guidelines and protocols. The second part of the book consists of chapters that are extended versions of selected papers that were originally submitted to the ECAI-2006 workshop 'AI Techniques in Health Care: Evidence-based Guidelines and Protocols'. These chapters will provide the reader detailed information about actual research in the area by leading researchers.

This book provides an account of what governments have been doing to enhance the contribution of the OECD Guidelines for Multinational Enterprises along with a special report on corporate responsibility in the developing world.

The intention of this study is to predict one year in advance whether a regarded firm will grow extraordinarily in the next year. This is crucial for private investors and fund managers who need to decide whether they should invest in a certain firm. Companies like Apple and Amazon have shown that people who recognized the potential of such companies at the right time earned a lot of money. The applied prediction models can also be used by politicians to identify companies which are eligible for funding, because growing companies oftentimes hire many employees. Since annual reports are often publically available for free, it is reasonable to take advantage of them for such a prediction. The prediction models are based on classification trees and forests because they have some very substantial advantages over other methods like neural networks, which are frequently used in literature. For instance, they do not have distributional assumptions, accept both quantitative and qualitative inputs, and are not sensitive with respect to outliers. Furthermore, they are easy to understand by humans and can deal with missing values, which is crucial for practical applications.

The "Local Technology Plan Guidelines" serve as the basis for the Department's annual technology data collection. This report takes a look at the data submitted by 344 school districts, examining the progress Massachusetts school districts are making in meeting the recommended guidelines. In doing so, it will gauge the degree to which local schools are ready to use technology to enhance teaching and learning. District leaders can use this information, along with their local technology data, to help identify areas where they are falling behind and where the infusion of technology stimulus funds is likely to have the greatest impact. Because the report focuses on districts' technology readiness relative to the "Local Technology Plan Guidelines", its organization follows the five areas covered by the guidelines: (1) Clear Vision and Implementation Strategies; (2) Technology Integration and Literacy; (3) Technology Professional Development; (4) Accessibility of Technology; and (5) E-Learning and Communications. Local Technology Plan Guidelines is appended. (Contains 25 footnotes.).
