The Biochemistry Basics Biochemistry and Molecular Biology Study Guide was created by a renowned student, from the University of Florida, and includes all notes, diagrams, and study guides for all the important subjects covered in Biochemistry, Molecular Biology, Genetics, and Microbiology. Milin Kurup is a

double major in B.S. Microbiology and Cognitive and Behavioral Neuroscience student from the University of Florida. In addition to his degree, Milin is a UF Biochemistry (BCH4024) Study Instructor/ Group Leader, a Microbiology (MCB3020L) Teaching Assistant, a Genetics (PCB4522) Teaching Assistant, and a Neuroscience Research Assistant at the University of Florida. While many of these classes cover high density material, this study guide hopes to organize and condense the whole curriculum into short page review sheets. In the author's time of instruction and study, he organized a collection of all reactions, mechanisms, processes, and concepts all studied in Biochemistry, Genetics, and Microbiology. Overall, this biochemistry study guide covers topics such as biomolecule structures (Protein, Carbohydrate, Nucleic Acids, and Lipids), biomolecules function, biomolecule metabolism (Protein Metabolism, Carbohydrate Metabolism, Nucleic Acid Metabolism, and Lipid Metabolism), physiological biochemical relationships, genetics, and biological/microbiological biochemical processes. Overall, the guide is organized into 1-3 page summaries of each specific topic, and acts as a study guide for those who hope to study individual concepts in detail. All sections include detailed diagrams, color coded notes, labeled illustration and detailed descriptions for effective comprehension. In addition to class studies, many students also have used this study guide as an MCAT review guide. The short and condensed review pages have helped many student organize and categorize important topics, as they continue to study for the MCAT. Ultimately, this organized set can be extremely useful for students review, especially before class exams, school projects, standardized test, and much more!

Unlike most biotechnology textbooks, Dr. David P. Clark's Biotechnology approaches modern biotechnology from a molecular basis, which grew out of the increasing biochemical understanding of physiology. Using straightforward, less-technical jargon, Clark manages to introduce each chapter with a basic concept that ultimately evolves into a more specific detailed principle. This up-to-date text covers a wide realm of topics, including forensics and bioethics, using colorful illustrations and concise applications. This book will help readers understand molecular biotechnology as a scientific discipline, how the research in this area is conducted, and how this technology may impact the future. · Up-to-date text focuses on modern biotechnology with a molecular foundation · Basic concepts followed by more detailed, specific applications · Clear, color illustrations of key topics and concepts · Clearly written without overly technical jargon or complicated examples
