When *Biology: A Search for Order in Complexity* was originally released in the early 1970s, it was the first text of its kind to challenge the long-standing assumption that a study of biology must be predicated upon the atheistic philosophy of Darwinian evolution. Now, over three decades later, as the so-called theory of evolution faces a deepening crisis, Christian Liberty Press is pleased to present a newly updated and improved version of the textbook that first challenged the modern scientific community with the validity of biblical creationism. *Biology: A Search for Order in Complexity, Second Edition*, is the culmination of over two years of diligent study and labor by a team of educators and scientists who are committed to giving students a greater understanding of and appreciation for the handiwork of Almighty God. Every effort has been made to ensure that this biology text is scientifically accurate and relevant to the needs of students in the twenty-first century. With gratefulness to the Creator of the whole earth, we humbly present this new edition to the public in the hope that it will be a powerful influence in the lives of those who are seeking true science and an understanding of life.

Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

**Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.**
