Provides an overview of the central environmental issues which arise from the activities of humans with special emphasis on the need to achieve a sustainable, more environmentally responsive development. Examines how biotechnology may be applied to the production and utilisation of renewable energy and material resources and to consider how this and the biotechnological treatment of waste will contribute to the management of the environment.

International Conference of the European Science Education Research Association, held in Thessaloniki, Greece, in August 2001. The aim of the Conference was to present various perspectives of research in science education in the context of the rapidly developing knowledge-based society. It offers a global presentation of issues under study for improving science education research in the context of the knowledge-based society at a European and international level. The first chapters handle several theoretical approaches, research overviews and research methodologies as well as the popular topic of teaching and learning of science. The following chapters are devoted to studies related to the development, use and integration of

I.C.T. in science education, as well as to science teachers' knowledge and aspirations and to the linking of research to teaching practices. The volume closes with a review of completed or current international research projects which are being undertaken by groups from different countries.

Intended for the more concise course, 'Essential Invitation to Oceanography' provides a thorough introduction to oceanographic concepts while omitting advanced topics that some courses do not require. Written for the non-science student, this text lets readers explore how the oceans work while explaining their relevance within the four major divisions of ocean science--geology, chemistry, physics,
