Few scholars have been as influential in finance, both as an academic field and an industry, as Eugene Fama. Since writing his groundbreaking 1970 essay on efficient capital markets, Fama has written over 100 papers and books that have been cited hundreds of thousands of times. Yet there is no one collection where one can easily find his best work in all fields. "The Fama Portfolio" will be an outstanding and unprecedented resource in a field that still concentrates mainly on questions stemming from Fama's work: Is the finance industry too large or too small? Why do people continue to pay active managers so much? What accounts for the monstrous amount of trading? Do high-speed traders help or hurt? The ideas, facts, and empirical methods in Fama's work continue to guide these investigations. "The Fama Portfolio" will be a historic and long-lasting collection of some of the finest work ever produced in finance."

Over the past few decades there has been a prolific increase in research and development in area of heat transfer, heat exchangers and their associated technologies. This book is a collection of current research in the above mentioned areas and discusses experimental, theoretical and calculation approaches and industrial utilizations with modern ideas and methods to study heat transfer for

single and multiphase systems. The topics considered include various basic concepts of heat transfer, the fundamental modes of heat transfer (namely conduction, convection and radiation), thermophysical properties, condensation, boiling, freezing, innovative experiments, measurement analysis, theoretical models and simulations, with many real-world problems and important modern applications. The book is divided in four sections : "Heat Transfer in Micro Systems", "Boiling, Freezing and Condensation Heat Transfer", "Heat Transfer and its Assessment", "Heat Transfer Calculations", and each section discusses a wide variety of techniques, methods and applications in accordance with the subjects. The combination of theoretical and experimental investigations with many important practical applications of current interest will make this book of interest to researchers, scientists, engineers and graduate students, who make use of experimental and theoretical investigations, assessment and enhancement techniques in this multidisciplinary field as well as to researchers in mathematical modelling, computer simulations and information sciences, who make use of experimental and theoretical investigations as a means of critical assessment of models and results derived from advanced numerical simulations and improvement of the developed models and numerical methods.

House cleaning has been an innate human activity forever but only since the early 19th century have mechanical devices replaced the physical labor (performed mostly by women). Mechanical carpet sweepers were replaced by manual suction cleaners, which in turn were replaced by electric vacuum cleaners in the early 20th century. Innovative inventors, who improved vacuum cleaners as electricity became commonly available, made these advances possible. Many early manufacturers failed, but some, such as Bissell, Hoover, Eureka and others, became household names as they competed for global dominance with improved features, performance and appearance. This book describes the fascinating people who made this possible, as well as the economic, cultural and technological contexts of their times. From obscure beginnings 200 years ago, vacuum cleaners have become an integral part of modern household culture.

Tom Bissell is a prizewinning writer who published three widely acclaimed books before the age of thirty-four. He is also an obsessive

gamer who has spent untold hours in front of his various video game consoles, playing titles such as Far Cry 2, Left 4 Dead, BioShock, and Oblivion for, literally, days. If you are reading this flap copy, the same thing can probably be said of you, or of someone you know. Until recently, Bissell was somewhat reluctant to admit to his passion for games. In this, he is not alone. Millions of adults spend hours every week playing video games, and the industry itself now reliably outearns Hollywood. But the wider culture seems to regard video games as, at best, well designed if mindless entertainment. Extra Lives is an impassioned defense of this assailed and misunderstood art form. Bissell argues that we are in a golden age of gaming—but he also believes games could be even better. He offers a fascinating and often hilarious critique of the ways video games dazzle and, just as often, frustrate. Along the way, we get firsthand portraits of some of the best minds (Jonathan Blow, Clint Hocking, Cliff Bleszinski, Peter Molyneux) at work in video game design today, as well as a shattering and deeply moving final chapter that describes, in searing detail, Bissell's descent into the world of Grand Theft Auto IV, a game whose themes mirror his own increasingly self-destructive compulsions. Blending memoir, criticism, and first-rate reportage, Extra Lives is like no other book on the subject ever published. Whether you love video games, loathe video games, or are merely curious about why they

are becoming the dominant popular art form of our time, Extra Lives is required reading.

Earth Day celebrates our beautiful planet and calls us to act on its behalf. Some people spend the day planting flowers or trees. Others organize neighborhood clean-ups, go on nature walks, or make recycled crafts. Readers will discover how a shared holiday can have multiple traditions and be celebrated in all sorts of ways.

A young detective's first case in Tennessee puts her on the path of a gruesome serial killer in the New York Times bestselling author's romantic thriller. One by one, they will die. He has waited patiently, envisioning their final moments. Their tortured screams, their pleas for mercy—all will be in vain as he executes his sadistic plan. Homicide detective Julia Cass has witnessed plenty of crime scenes. But the murder of a Chattanooga judge is shocking in its brutality. Teamed with FBI agent Will Brannock, Julia delves into an investigation that soon unearths more

bodies—all mutilated in the same way, all left with a gruesome souvenir of a killer's ruthless rage . . . The only way to stop the slaughter is to predict the next victim. But when you're dealing with vengeance at its most ruthless, one wrong move can make you a target . . . and the next word you utter could be your last . . .

From the evacuation of Saigon in 1975 to the end of the twentieth century, the United States committed its forces to more than a dozen military operations. Offering a fresh analysis of the Iranian hostage rescue attempt, the invasions of Granada and Panama, the first Gulf War, the missions in Somalia and Bosnia, and more, author and distinguished U.S. naval captain Peter Huchthausen presents a detailed history of each military engagement through eyewitness accounts, exhaustive research, and his unique insider perspective as an intelligence expert. This timely and riveting military history is “a must-read for anyone seeking to understand the nature of war today” (Stephen Trent Smith).

Brooklyn is nearly sixteen-years-old and feels like she's invisible. She desperately wants to be pretty and popular, and to be adored by a cute guy. Luckily for her, she's a witch about to come of age -so she's only a few spells away from making it all happen. On her milestone birthday, Brooklyn's conservative parents finally unbind her powers, and this newfound freedom leads to a spell-assisted dream makeover. Her crush, Asher, finally notices her, and so does the Queen Bee of the popular, cool clique. Even better, Brooklyn discovers her true power: the ability to magically match couples with a love spell. But Brooklyn's quest for popularity is not without its price, and as the clique escalates their initiation tests, the more she relies on her powers to complete the tasks. Can Brooklyn keep her magic hidden from their scrutiny? Like her Salem ancestors, if caught, she could be vilified. But worst of all, Brooklyn runs the risk of losing what she

really cares about Asher unless she can work a little magic of her own.

This substantially revised and updated edition provides the most thorough evangelical treatment available on a theology of creation care.

Children living in poverty have the same God-given potential as children in wealthier communities, but on average they achieve at significantly lower levels. Kids who both live in poverty and read below grade level by third grade are three times as likely not to graduate from high school as students who have never been poor. By the time children in low-income communities are in fourth grade, they're already three grade levels behind their peers in wealthier communities. More than half won't graduate from high school--and many that do graduate only perform at an eighth-grade level. Only one in ten will go on to graduate from college. These students have severely diminished opportunities for personal prosperity and professional success. It is clear that America's public schools do not provide a high quality public education for the sixteen million children growing up in poverty. Education expert Nicole Baker Fulgham explores what
