Microbe-Assisted Phytoremediation of Environmental Pollutants: Recent Advances and Challenges provides comprehensive information on the principles and practical knowledge of microbe-assisted phytoremediation of organic and inorganic pollutants for environmental safety and sustainability. The book describes the physiological, biochemical, microbiological, and molecular basis of microbe-assisted phytoremediation and contains many relevant topics to fill the gaps in developing an understanding of microbe-assisted phytoremediation of environmental pollutants. It provides state-of-the-art knowledge on fundamental, practical, and purposeful utilization of plant-associated bacteria (plant growth-promoting rhizobacteria [PGPR] and endophytes) and arbuscular mycorrhizal fungi for plant-growth promotion and enhanced phytoremediation of environmental pollutants in contaminated matrix. Features: Provides a state-of-the-art overview of microbe-assisted phytoremediation Emphasizes the roles of PGPR, endophytes, and mycorrhizal fungi in assisted phytoremediation Elucidates biochemical and molecular mechanisms of microbe-assisted phytoremediation Details field studies and success stories of microbe-assisted phytoremediation Explores advances, challenges, and future directions in microbe-assisted phytoremediation The book serves as a valuable resource for researchers, ecotoxicologists, environmental scientists, microbiologists and biotechnologists, environmental health and risk scientists, environmental science managers and administrators, remediation practitioners, environmental policymakers, and students at the postgraduate and doctoral levels in the relevant fields.

Issues for Mar. 1947-Sept. 17-30, 1958 include International Section, published separately since Mar. 1959 as the Conference's International origin-destination survey of airline passenger traffic.

Eleven major scholars of the Anglo-Saxon period consider Alfred the Great, his cultural milieu, and his achievements. With revised or revived views of the Alfredian revival, the contributors help set the agenda for future work on a most challenging period.

Recent Advances and Challenges

The White Nuns

This study explores the shared history of the French empire from the perspective of material culture in order to re-evaluate the participation of colonial, Creole, and indigenous agency in the construction of imperial spaces. The decentred approach to a global history of the French colonial realm allows a new understanding of power relations in different locales. Providing case studies from four parts of the French empire, the book draws on illustrative evidence from the French archives in Aix-en-Provence and Paris as well as local archives in each colonial location. The case studies, in the Caribbean, Canada, Africa, and India, each examine building projects to show the mixed group of planners, experts, and workers, the composite nature of building materials, and elements of different 'glocal' styles that give the empire its concrete manifestation. Building the French empire gives a view of the French overseas empire in the early modern period not as a consequence or an outgrowth of Eurocentric state-building, but rather as the result of a globally interconnected process of empire-building.
