Complementing Dibb and Simkin's established reputation in their field, this text presents a punchy overview of the leading 50 themes of marketing, each concisely summarized for revision purposes or quick-learning. While appealing primarily to students undertaking marketing exams, many practitioners will also find this 'glossary of current marketing' hard to resist. The title builds on the earlier works of Dibb and Simkin, whose Houghton Mifflin text, 'Marketing: Concepts and Strategies', is the current business school market leading text in the United Kingdom, while their Thomson Learning text, 'The Marketing Casebook: Cases and Concepts', has just been revised and is the most widely used marketing casebook. From understanding customers, branding and positioning, relationship marketing, social responsibility through to value-based marketing and one-to-one marketing, this book covers all the issues the modern marketer must address. The text itself is organized into short structured chapters,

neuroscience is an expanding field which, by investigating the neural mechanisms that inform our behavior, explains our ability to recognize, understand, and interact with others. Concepts such as trust, revenge, empathy, prejudice, and love are now being explored and unraveled by the methods of neuroscience. Many researchers believe that evolutionary expansion of the primate and human brain was driven by the need to deal with social complexity, not only to understand and outwit our peers, but to take advantage of the benefits of cooperative living. But what kind of brain-based mechanisms did we end up with? Special routines for dealing with social problems, or more general solutions that can be used for non-social cognition too? How are we able to sacrifice our own self-interests to respond to the needs of others? How do cultural differences in the organization of society shape individual minds (and brains), and does the brain provide constraints on the possible range of cultural permutations? The Student's Guide to Social Neuroscience explores and explains these big issues, using accessible examples from contemporary research. The first book of its kind, this engaging and cutting-edge text is an ideal introduction to the methods and concepts of social neuroscience for undergraduate and postgraduate students in fields such as psychology and neuroscience. Each chapter is richly illustrated in attractive full-color with figures, boxes, and 'real-world' implications of research. Several pedagogical features help students engage with the material, including essay questions, summary and key points, and further reading. This book is accompanied by substantial online resources that are available to qualifying adopters.
