Almost every modern manufacturing process relies on industrial gases, and sales of such gases are expected to rise by around 45% over the next five years. Here, experienced and authoritative experts from one of the two world's largest producer of industrial gases impart their knowledge on atmospheric, noble and synthesized gases, carbon dioxide, LNG, acetylene and other fuel gases, as well as special and medical gases. Modern applications, e.g., the use of hydrogen in fuel cells, are included as well. This practical text is rounded off by a section on logistics.

*Case Based Reviews in Pediatric Pulmonology is a comprehensive collection of reviews covering all aspects of paediatric pulmonology, from disorders of the upper respiratory tract to pulmonary diseases in the paediatric intensive care unit. Each chapterbegins with a case scenario and provides guidance on the assessment and appropriate treatment of the relevant disorder, followed by a key points summary.*

*The induction of antigen-specific immune responses after in vivo transfection with expression plasmids has triggered a revolution of vaccine research. After a first hype, evoked by the fascinating options of this method, clinical studies did not reach the ambitious aims and a phase of disillusion ensued. It became obvious that Gene vaccines displayed a weaker immunogenicity in humans than had been observed in the mouse models. Meanwhile these hurdles have been overcome and gene vaccines undergo a renaissance. The present book gives an update of the "world of naked gene vaccines", namely DNA and RNA vaccines. Its content ranges from general mechanisms, inherent immunostimulatory properties and the vast potential to modulate immune responses, to recent successful clinical studies and approved veterinary gene vaccines. Beyond the state-of-the-art of genetic immunization, the reader will be stimulated with a chapter addressing "burning questions".*

*Author Vizard covers blending the bowls, basic porting procedures, as well as pocket porting, porting the intake runners, and many advanced procedures. Advanced procedures include unshrouding valves and developing the ideal port area and angle.*

**As both an immunological disease and a condition of tissue remodeling, asthma involves a number of inflammatory as well as structural cells that interact in response to stimuli present in the environment. Through numerous well-designed schematics, macro- and microscopic pictures, tables, and research data, this full-color atlas defines the immunologic interplay that leads to airway inflammation in asthma and addresses its prevention and treatment. Written by some of the most reputable scientists and clinicians in the field, An Atlas of Asthma describes the clinical features of asthma and the complex pathophysiological processes that are believed to underlie it. The book then presents discoveries from studies of asthma genetics as well as the cellular responses that lead to clinical symptoms. Finally, it reviews the currently available treatment options and the problems of disease control, particularly in cases of severe disease.**
