It supports mechatronics practitioners in identifying key areas in design, modeling and technology and places these in the wider context of concepts such as cyber-physical systems and the Internet of Things. For educators it considers the potential effects of developments in these areas on mechatronic course design, and ways of integrating these. Written by experts in the field it explores topics including systems integration, design, modeling,

**influential twentieth-century designers. Industrial Strength Design: How Brooks Stevens Shaped Your World is a long overdue introduction to the work of visionary industrial designer Brooks Stevens (1911-1995). Believing that an industrial designer "should be a businessman, an engineer, and a stylist, in that order," Stevens created thousands of ingenious and beautiful designs for industrial and household products—including a clothes dryer with a window in the front, a wide-mouthed peanut butter jar, and the Oscar Mayer Wienermobile. It was Brooks Stevens who, in 1954, coined the phrase "planned obsolescence," defining it as "instilling in the buyer the desire to own something a little newer, a little better, a little sooner than is necessary." This concept has since been blamed for everything from toasters that stop working to today's throwaway culture, but Stevens was simply recognizing the intentionally ephemeral nature of a designer's work. Asked once to name his favorite design, he replied, "none, because every one would have to be restudied for the tastes of tomorrow." This book, which**
