approach. Idea and Methods of Legal Research unearths how the thinking process is to be streamlined in research, how a theme is built on the basis of comprehensive and intensive study, and the paths through which notions of objectivity, feminism, ethics, and purposive character of knowledge are to be understood. The book first explains the meaning, evolution, and scope of legal research, and discusses objectivity and ethics in legal research. It engages with the requirements, advantages, and limits of various doctrinal and non-doctrinal methods and tools, and the points to be considered in selecting a suitable method or combination of methods. It highlights analytical, historical, philosophical, comparative, qualitative, and quantitative methods of legal research. The book then goes on to discuss the use of multi-method legal research, policy research, action research, and feminist legal research and finally, reflects on research-based critical legal writing, as opposed to client-related legal writing. This book, thus, is a comprehensive answer to key questions one faces in

The SAGE Handbook of Qualitative Business and Management Research Methods provides a state-of-the-art overview of qualitative research methods in the business and management field. Bringing together a team of leading international researchers, the chapters offer a comprehensive overview of the history and traditions that underpin qualitative research in the field. The chapters in this volume have been arranged into four thematic parts: Part One explores the influential traditions underpinning qualitative research, such as positivism, interpretivism, pragmatism, constructionism and beyond. Part Two looks at research designs, covering ethnography, field research, action research, case studies, process and practice methodologies. Part Three focusses on the researcher: examining issues such as positionality, reflexivity, ethics, gender and intersectionality. Part Four examines challenges relating to research design, access and departure, choosing participants and more.

The visual constitutes an increasingly significant element of contemporary organization, as post-industrial societies move towards economies founded on creative and knowledge-intensive industries. The visual has thereby entered into almost every aspect of corporate strategy, operations, and communication; reconfiguring basic notions of management practice and introducing new challenges in the study of organizations. This volume provides a comprehensive insight into the ways in which organizations and their members visualize their identities and practices and how they are viewed by those who are external to organizations, including researchers. With contributions from leading academics across the world, The Routledge Companion to Visual Organization is a valuable reference source for students and academics interested in disciplines such as film studies, entrepreneurship, marketing, sociology and most importantly, organizational behaviour.

Social Research Methods, second Canadian edition, provides students with the conceptual building blocks and essential tools for conducting quantitative and qualitative research. Tackling complex, subtle, and methodological issues in ways that require reflection rather than regurgitation, the text challenges students to think freely, critically, and creatively. This new second edition includes updated information on sampling software, enhanced discussion of historical context and feminist methodology, and a new introductory chapter that reflects fascinating and controversial issues within the discipline. Social Research Methods illuminates fundamental concepts in a way that will engage the Canadian student.

With contributions from those who have defined that territory, this volume is not only a key point of reference for researchers, students and practitioners, but also an agenda-setting prospective and retrospective look at the state of leadership in the twenty-first century. It evaluates the domain and stretches it further by considering leadership scholarship from every angle, concluding with an optimistic look at the future of leaders, followers and their place in organizations and society at large. Each section represents a distinctive slant on leadership: - Macro perspectives - including strategic leadership, organization theory, charismatic leadership, complexity leadership, and networks. - Political and philosophical perspectives - including distributed leadership, critical leadership, ethics, the military and cults. - Psychological perspectives - including personality, leadership style and contingency theories, transformational leadership, exchange relationships, shared leadership, cognition, leadership development, gender, trust, identity and the 'dark side' of leadership. - Cultural perspectives - including spirituality, aesthetics, and creativity. - Contemporary and emergent perspectives -

field of mixed methods research. Bergman's book examines the current state of mixed-methods research, exploring exciting new ways of conceptualizing and conducting empirical research in the social and health sciences. Contributions from the world's leading experts in qualitative, quantitative, and mixed methods approaches are brought together, clearing the way for a more constructive approach to social research. These contributions cover the main practical and methodological issues and include a number of different visions of what mixed methods research is. The discussion also covers the use of mixed methods in a diverse range of fields, including sociology, education, politics, psychology, computational science and methodology. This book represents an important contribution to the ongoing debate surrounding the use of mixed methods in the social sciences and health research, and presents a convincing argument that the conventional, paradigmatic view of qualitative and quantitative research is outdated and in need of replacement. It will be essential reading for anyone actively engaged in qualitative, quantitative and mixed methods research and for students of social research methods. Manfred Max Bergman is Chair of Methodology and Political Sociology at the University of Basel.

Doing Research in Business and Management brings the theory and techniques of research methods to life and covers all of the areas of research, from a review of secondary data or literature, or writing a research proposal, to completing an entire research project. The book is written for students on undergraduate and postgraduate degree programmes in business, management or related disciplines.

Most researchers in organization and management studies stick to two or three traditional research methods like surveys and interviews. Sticking with the familiar is seen as a safe bet,

and innovation is discouraged by academic incentives and rewards. But research participants are now suffering from 'survey fatigue', and using the same old methods runs the risk of generating the same old findings. This book describes twelve unconventional methodologies in organization and management research. These include unconventional research settings and data sources, unconventional research designs and data collection methods, unconventional analytic approaches, and designs and methods that exploit new technology developments. The aim is to encourage dialogue and experimentation with regard to the development of innovative, unconventional approaches to organization and management research. Several commentators have criticized the way in which research methods have become more formulaic, and have argued for greater diversity in research approaches. The methodological perspective that we adopt shapes our interpretation of the information that we gather. Different methods generate different kinds of information, leading to different ways of understanding the phenomena that we are investigating. Our methods influence our styles of theorizing, ways of thinking and reasoning, and forms of writing and reporting research. This book will be of value to academic researchers in organization and management studies, Doctoral candidates, and Masters students on MBA and similar programmes.

methods. It gives students an assessment of the contexts within which different methods may be used and how they should be implemented. Organizations consider trust as a pillar for successful operations in an increasingly global competitive environment. Some professionals go further and argue that in an economy trust is more important than natural resources. This book deals with ways to measure trust and its impact on organizational performance, as well as to understand the role of Management Accounting in creating trust. The author demonstrates that trust drives organizational performance, and reveals the key role of management accountants in facilitating the flow of trust between CEOs and line managers.

Visual Research Methods is a guide for students, researchers and teachers in the social sciences who wish to explore and actively use a visual dimension in their research. This book offers an integrated approach to doing visual research, showing the potential for building convincing case studies using a mix of visual forms including: archive images, media, maps, objects, buildings, and video interviews. Examples of the visual construction of 'place', social identity and trends of analysis are given in the first section of the book, whilst the essays in the second section highlight the astonishing creativity and innovation of four visual researchers. Each detailed example serves as a touchstone of quality and analysis in research, with themes ranging from the ethnography of a Venezuelan cult goddess to the forensic photography of the skeleton of a fourteenth-century nobleman. They give a keen sense of the motives, philosophies and benefits of using visual research methods. This volume will be of practical interest to those embarking on visual research as well as more experienced researchers. Key concerns include the power of images and their changing significance in a world of cross – mediation, techniques of analysis and ethical issues, and how to unlock the potential of visual data for research.
