Get the database skills that are in demand More and more organizations are turning to database management systems to manage their accounting and other operational data. These organizations are looking for accountants with database skills and a good understanding of information technology. With Chang and Ingraham's Data Modeling and Database Design: Using Access to Build a Database you can develop the skills needed to build an actual accounting information system. Taking an approach that is both conceptual and practical, this book will help you understand the theory of data modeling, as well as its application and ultimate implementation in database design. Key Features: Step-by-step detailed instructions show how to model and design three essential processes of an accounting information system: the sales/collection process, the acquisition/payment process, and the human resources/payroll process. Presents data modeling from an REA (resource-event-agent) perspective. The approach is software-independent, but utilizes Microsoft Access 2003 to implement the data models throughout the text. Multiple-choice and detailed problems at the end of each chapter reinforce learning. Includes a CD-ROM containing the additional data and forms you will need to complete each chapter.

This text has a two-fold approach: it teaches students how businesses use spreadsheets and databases in accounting, and serves as a primer explaining how to use these tools in solving real accounting problems. It is written in a step-by-step format with plenty of screen shots making it easy to follow.

***Many scholars, practitioners, and policy-makers in the cultural sector argue that Canadian cultural policy is at a crossroads: that the environment for cultural policy-making has evolved substantially and that traditional rationales for state intervention no longer apply. The concept of cultural citizenship is a relative newcomer to the cultural policy landscape, and offers a potentially compelling alternative rationale for government intervention in the cultural sector. Likewise, the articulation and use of cultural indicators and of governance concepts are also new arrivals, emerging as potentially powerful tools for policy and program development. Accounting for Culture is a unique collection of essays from leading Canadian and international scholars that critically examines cultural citizenship, cultural indicators, and governance in the context of evolving cultural practices and cultural policy-making. It will be of great interest to scholars of cultural policy, communications, cultural studies, and public administration alike.***
