Robert Hefner presents an analysis designed to bridge the gap between village studies and social history. He describes the forces that have shaped upland politics and society from pre-colonial times to the Green Revolution today.

It follows the changes in the film industry with the arrival of sound motion pictures and the Great Depression, when black performers such as Stepin Fetchit and

As the army's topographical engineer in California from 1849 to 1851, George Horatio Derby wrote detailed reports on the region, its people, its resources, and its geography—providing critical information for an understaffed military charged with bringing order to a vast new empire along the Pacific Slope. Early maps and reports by pioneers, trappers, and newspapermen, even by such professionals as John C. Frémont and William Emory, were limited in scope and often unreliable. In contrast, those authored by Derby and the army's other trained topographical engineers were remarkably accurate, extensive, and richly descriptive. Long buried in the files of the National Archives, they have also remained largely unknown, even to historians. Collected and reproduced here for the first time, these journals and maps offer a new and unique

perspective on California in the mid-nineteenth century. Derby's reports and journals appear alongside those of Robert Stockton, Williamson, William H. Warner, Edward O. C. Ord, Nathaniel Lyon, Henry Walton Wessells, and Erasmus Darwin Keyes. These documents offer extraordinary firsthand views of the environment, natural resources, geography, and early settlement, as well as the effects of disease on Native and white populations. The writers' detailed, often witty insights offer new understandings of life in California during an era of momentous change. Historian Gary Clayton Anderson and anthropologist Laura Lee Anderson provide historical, geographic, and biographical context in the book's introduction and in headnotes and annotations for each journal. With these editorial enhancements, the documents reveal as much about the character of their authors and their time as of the land and

Two historians, Robert V. Their concise and engaging survey of frontier history traces the story from the first Columbian contacts between Indians and Europeans to the multicultural encounters of the modern Southwest. The Krio of Sierra Leone--often erroneously called 'Creole'--are a people with a unique tradition and history. Their ancestors, the first colonists of the Peninsula on which Freetown stands, were black people brought to Africa from London, Nova Scotia and Jamaica, and 'Liberated Africans' freed from slave ships intercepted on their way to the Americas. Never a large group, the Krio

people were at first favored subjects of the colonial rulers, and received the full force of the evangelistic and educational outreach of the English-based missionary societies. Soon they had produced an elite echelon of professionals, academics, clergymen and business entrepreneurs very much in the white man's image. The middle and late nineteenth century was their heyday. Wyse has set out to interpret the history of the Krio from their earliest days as a collective entity to the present, to chart the graph of their rise and decline as a political force, and to examine the characteristic ethos of the people as expressed in their social, economic and above all educational aspirations, and in the careers of leading

The important role of the humbler Krio traders and market women in financing the education of their offspring in each generation is stressed, and the author meets the often-voiced criticism of the Krio head-on by frankly examining the weaknesses of his people, along with their strengths.

It is important that scientists think about and know their history - where they came from, what they have accomplished, and how these may affect the future. Weed science has been strongly influenced by technology developed by supporting industries, subsequently employed in research and, ultimately, used by farmers and crop growers. The science has focused on results and progress. Scientists have been--and the majority remain--problem solvers whose solutions have evolved as rapidly as have the new weed problems needing solutions.
