This volume documents international, national, and small-scale testing and assessment projects of English language education for young learners, across a range of educational contexts. It covers three main areas: age-appropriate 'can statements' and task types for teaching and testing learners between the ages of 6 to 13; innovative approaches to self-assessment, diagnostic testing, self-perception, and computer-based testing; and findings on how young learners perform on vocabulary, listening, speaking, pronunciation, and reading comprehension tests in European and Asian contexts. Early language learning has become a major trend in English language education around the globe. As a result of the spread of teaching English to a growing number of young children, assessment of and for learning have emerged as key issues. In line with this development, there is a clear and emerging need to make early language programs accountable and to assess both the progress children make over time and to quantify their achievement at various stages of development. This volume informs stakeholders about the realistic goals of early language learning, their efficiency, and how much progress children make over time.

They provide the first step towards the Cambridge ESOL main suite exams (e.g. KET, PET, and FCE). Sets 1-4 have been thoroughly updated by Cambridge ESOL to reflect the 2007 test changes while Cambridge Young Learners English Tests 5 consists of completely new material. Each set contains three full-colour tests, an Audio CD, and an answer booklet. Books are numbered to indicate how many are available. Numbers do not refer to levels.

Cambridge Global English Stages 7-9 follow the Cambridge Lower Secondary English as a Second Language (ESL) Curriculum Framework. Coursebook 9 includes eighteen thematic units based on the Cambridge International Examinations Scheme of Work for Stage 9. Our Stage 9 Coursebook lays the foundation for learners who may go on to the Cambridge IGCSE ESL qualification. The topics and situations in Cambridge Global English reflect international diversity and encourage learning about different ways of life. It presents realistic listening, speaking, reading and writing tasks, and end-of-unit projects similar to those students might encounter in first-language English context. After every other unit, there is a literature spread featuring authentic prose and poetry from a variety of sources. CEFR Level: B1+

Introduce your learners to creative writing and writing for a purpose. They'll write a play scene and an article about a cultural festival, helping build their extended writing skills as they progress through the units. Each unit focuses on a different text type such as dialogue, recounts, reports or instructions. Model texts in each chapter show learners good examples of each writing type and specific activities help them practise grammar typical of the genre. Learners work individually and collaboratively, developing skills such as creative thinking, planning, drafting, peer evaluation and editing.

Cambridge English Young Learners 9 Starters Answer Booklet

A fun course to get young children ready to learn in English. Themed units - from 'homes' to 'play time' - teach children letters, colours, numbers and more.

Each book covers one term and includes three units. Every unit includes a story, from traditional tales such as Goldilocks, to stories in familiar settings like the classroom. Activities (including songs, stickers, games and matching) help children develop speaking, listening and motor skills alongside early comprehension, reading and writing skills. Each unit encourages learners to build vocabulary by relating content to their experiences - the first steps of critical thinking and active learning. Opportunities for differentiation allow learners to progress at their own pace.

This book presents research on the learning of foreign languages by children aged 6-12 years old in primary school settings. The collection provides a significant and important contribution to this often overlooked domain and aims to provide research-based evidence that might help to inform and develop pedagogical practice. Topics covered in the chapters include the influence of learner characteristics on word retrieval; explicit second language learning and language awareness; meaning construction; narrative oral development; conversational interaction and how it relates to individual variables; first language use; feedback on written production; intercultural awareness raising and feedback on diagnostic assessment. It will be of interest to undergraduate and graduate students, researchers, teachers and stakeholders who are interested in research on how children learn a second language at primary school.

An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. "Written by three experts in the field, Deep Learning is the only comprehensive book on the subject." —Elon Musk, cochair of

OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.
