“In all of the literature addressing education, race, poverty, and criminal justice, there has been nothing quite like Reading with Patrick.”—The Atlantic A memoir of the life-changing friendship between an idealistic young teacher and her gifted student, jailed for murder in the Mississippi Delta **FINALIST FOR THE DAYTON LITERARY PEACE PRIZE Recently graduated from Harvard University, Michelle Kuo arrived in the rural town of Helena, Arkansas, as a Teach for America volunteer, bursting with optimism and drive. But she soon encountered the jarring realities of life in one of the poorest counties in America, still displaced by the legacy of slavery and Jim Crow. In this stirring memoir, Kuo, the child of Taiwanese immigrants, shares the story of her complicated but rewarding mentorship of one student, Patrick Browning, and his remarkable literary and personal awakening. Convinced she can make a difference in the lives of her teenaged students, Michelle Kuo puts her heart into her work, using quiet reading time and guided writing to foster a sense of self in students left behind by a broken school system. Though Michelle loses some outside the trials and even gun violence, she is inspired by some such as Patrick. Fifteen and in the eighth grade, Patrick begins to thrive under Michelle's exacting attention. However, after two years of teaching, Michelle feels pressure from her parents and the draw of opportunities outside the city and leaves Arkansas to attend law school. Then, on the eve of her law-school graduation, Michelle learns that Patrick has been jailed for murder. Feeling that she left the Delta prematurely and determined to fix her mistake, Michelle returns to Helena and resumes Patrick's education—even as he sits in a jail cell awaiting trial. Every day for the next seven months they pore over classic novels, poems, and works of history. Little by little, Patrick grows into a confident, expressive writer and a dedicated reader galvanized by the works of Frederick Douglass, James Baldwin, Walt Whitman, W. S. Merwin, and others. In her time reading with Patrick, Michelle is herself transformed, contending with the legacy of racism and the questions of what constitutes a “good” life and what the privileged owe to those with bleaker prospects. “A powerful meditation on how one person can affect the life of another. . . . One of the great strengths of Reading with Patrick is its portrayal of the risk inherent to teaching.”—The Seattle Times “[A] tender memoir.”—O: The Oprah Magazine**

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand.We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that it can be customized to fit the needs of your course. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand—and apply—key concepts.

NEW Available free when ordered in a package with the text, this resource contains all the line art from the text without labels with plenty of room for students to take notes.

In this innovative rendition of The Oresteia, the poet, translator, and essayist Anne Carson combines three different visions – Aischylos' Agamemnon, Sophokles' Elektra, and Euripides' Orestes, giving birth to a wholly new experience of the classic Greek triumvirate of vengeance. Carson's accomplished rendering combines elements of contemporary vernacular with the traditional structures and rhetoric of Greek tragedy, opening up the plays to a modern audience. –from publisher description.

For courses in Intermediate Algebra. The perfect combination to master concepts: student-friendly writing, well-crafted exercises, and superb support The Lia! Series has helped thousands of students succeed in developmental mathematics by combining clear, concise writing and examples with carefully crafted exercises to support skill development and conceptual understanding. The reader-friendly style delivers help precisely when needed. This revision continues to support students with enhancements in the text and MyLab™ Math course to encourage conceptual understanding beyond skills and procedures. Student-oriented features throughout the text and MyLab Math, including the Relating Concepts exercises, Guided Solutions, Test Your Word Power, and the Lia! Now in its twelfth edition, Lewin's GENES continues to lead with new information and cutting-edge developments, covering gene structure, sequencing, organization, and expression. Leading scientists provide revisions and updates in their individual field of study offering readers current data and information on the rapidly changing subjects in molecular biology.

Neil Campbell and Jane Reece's BIOLOGY remains unsurpassed as the most successful majors biology textbook in the world. This text has invited more than 4 million students into the study of this dynamic and essential discipline. The authors have restructured each chapter around a conceptual framework of five or six big ideas. An Overview draws students in and sets the stage for the rest of the chapter, each numbered Concept Head announces the beginning of a new concept, and Concept Check questions at the end of each chapter encourage students to assess their mastery of a given concept. New Inquiry Figures focus students on the experimental process, and new Research Method Figures illustrate important techniques in biology. Each chapter ends with a Scientific Inquiry Question that asks students to apply scientific investigation skills to the content of the chapter. See you goodbye to dry presentations, and boring formulas, and abstract theory that would put Einstein to sleep. An entire way to master density, trigonometry, and geometry. McGraw-Hill's Demystified Series teaches complex subjects in a unique, easy-to-absorb manner and is designed for users without formal training, unlimited time, or genius IQs. Organized like self-teaching guides, they come complete with key points, background information, questions at the end of each chapter, and final exams. There's no better way to gain instant expertise! ABOUT BIOLOGY DEMYSTIFIED: * A college biology professor presents the fundamental facts, concepts, and principles of biology in an attractive and amusing framework * Great for anyone with an interest in biology, biotechnology, medicine, or the environment * Coverage includes both the anatomy and physiology of organisms as well as ecology and environmental relationships between organisms * Includes a pronunciation guide for difficult biological terms

Your hands-on study guide to the inner world of the cell! Need to get a handle on molecular and cell biology? This easy-to-understand guide explains the structure and function of the cell and how recombinant DNA technology is changing the face of science and medicine. You discover how fundamental principles and concepts relate to everyday life. Plus, you get plenty of study tips to improve your grades and score higher on exams! Explore the world of the cell — take a tour inside the structure and function of cells and see how viruses attack and destroy them Understand the stuff of life (molecules) — get up to speed on the structure of atoms, types of bonds, carbohydrates, proteins, DNA, RNA, and lipids Watch as cells function and reproduce — see how cells communicate, obtain matter and energy, and copy themselves for growth, repair, and reproduction Make sense of genetics — learn how parental cells organize their DNA during sexual reproduction and how scientists can predict inheritance patterns Decode a cell's underlying programming — examine how DNA is read by cells, how it determines the traits of organisms, and how it's regulated by the cell Harness the power of DNA — discover how scientists use molecular biology to explore genomes and solve current world problems Open the book and find: Easy-to-follow explanations of key topics The life of a cell — what it needs to survive and reproduce Why molecules are so vital to cells Rules that govern cell behavior Laws of thermodynamics and cellular work The principles of Mendelian genetics Useful Web sites Important events in the development of DNA technology Ten great ways to improve your biology grade

This is a user-friendly and practical guide for UK practitioners and those managing UK firms on the day-to-day legal issues that arise in the specialist field of partnerships and LLPs. The book is written by three authors: a leading partnership and LLP barrister with many years of litigation experience, a solicitor with specialist expertise in partnership and LLP structures and agreements, and a respected academic in the field. It provides clear and practical guidance on the main issues that arise time and again in UK partnerships and LLPs. While there are many important differences between traditional partnerships and LLPs, the practical issues that they face are often similar, and the book therefore tackle both. The focus is mainly on those areas that regularly cause difficulty in firms (be they traditional partnership or LLPs). Subjects covered include: the legal nature and characteristics of partnerships and LLPs * factors influencing choice of legal entity * the essential elements of partnership and members' agreements * management structures including management boards and partnership councils * conduct of meetings * partnership/LLP property and profits and losses * accounts, taxation, and audit * partner and member retirements and expulsions * duties of partners and members * Equality Act implications * suspension and garden leave * personal liability issues * dissolution and winding-up * goodwill * disputes: mediation, arbitration, and court proceedings * mergers, acquisitions, and conversions.
