Fragmentary texts play a central role in Classics. Their study poses a stimulating challenge to scholars and readers, while its methods and principles, far from being rigidly immutable, invite constant reflection on its methods, approaches, and goals. By focusing on some of the most relevant issues that fragmentologists have to face, this book contributes to the ongoing and lively debate on the study of fragmentary texts. This volume contains an extensive

theoretical introduction on the study of textual fragments, followed by eight essays on a wide variety of topics relevant to the study of fragmentary texts across literary genres. The chapters range from archaic Greek epics (the Hesiodic corpus) to late-antique grammarian Nonius Marcellus as a source of fragments of Republican literature. All contributions share a nuanced, critical attention to the main methodological implications of the study of fragmentary texts and mutually contribute to highlighting the field's common specificities and limitations, both in theory and in editorial practice. The book offers a representative spectrum of fragmentological issues, providing all readers with an

interest in Classics with an up-to-date, methodologically aware approach to the field. This book presents both experimental and theoretical aspects of topology in magnetism. It first discusses how the topology in real space is relevant for a variety of magnetic spin structures, including domain walls, vortices, skyrmions, and dynamic excitations, and then focuses on the phenomena that are driven by distinct topology in reciprocal momentum space, such as anomalous and spin Hall effects, topological insulators, and Weyl semimetals. Lastly, it examines how topology influences dynamic phenomena and excitations (such as spin waves, magnons, localized dynamic solitons, and Majorana fermions). The book

also shows how these developments promise to lead the transformative revolution of information technology.

A simple, straightforward & engaging introduction to a system of prediction that is over 4,000 years old.

This revisit of the bestselling *The Psychology of the Language Learner* reflects on these developments by challenging some of the assumptions upon which the original text was based, maintaining the familiar structure of the original, while situating the discussion within a very different theoretical framework. Written in a lively, accessible style, the book considers how the field has evolved and maintains a keen eye on the future, suggesting exciting new

Decision Consequence Analysis (DCA) is a framework for improving the quality of decision results. The framework is a systematic, multi-criteria quantification of uncertainties and the opportunities for managing and reducing the potential negative consequences of such uncertainties. DCA is demonstrated throughout Sustainable Land Development and Restoration for each stage of system based management of environmental issues. DCA links disciplines and incorporates components of risk modelling, probability modelling and the psychology of decision making. Its goal is to provide a

comprehensive unbiased decision making framework. Its foundation is accurately defining your problem statement and clearly vetting your objectives to build a structure for meaningful analysis of data. Employment of DCA consistently throughout the environmental industry can reduce decibel-driven, agenda-laden decision making, streamline expenditure of resources (financial, human, natural), and provide a clear path to the sustainable maintenance of balanced environmental systems as the penultimate objective. Sustainable Land Development and Restoration provides a toolbox to both the novice and experienced environmental practitioner of valuable techniques for addressing site specific environmental issues, as well as managing a portfolio of liabilities on an international

scale. Ultimately, the authors are addressing the critical issue of balancing environmental asset balance sheets, whether on the scale of an individual project, across a company's portfolio, or for a community. The environmental manager who adopts the principles in this book will have greater confidence that environmental protection or restoration activities are providing measurable utility. The goal is that, through multidimensional resource management analysis and practices companies and societies can achieve sustainable maintenance of a balanced environmental system. Descriptions of technical, contracting and implementation processes are supported by detailed case studies to provide real world context rather than an academic exchange of theories. Linear programming is one of the most extensively used techniques in the toolbox of quantitative methods of optimization. One of the reasons of the popularity of linear programming is that it allows to model a large variety of situations with a simple framework. Furthermore, a linear program is relatively easy to solve. The simplex method allows to solve most linear programs efficiently, and the Karmarkar interior-point method allows a more efficient solving of some kinds of linear programming. The power of linear programming is greatly enhanced when came the opportunity of solving integer and mixed integer linear programming. In these models all or some of the decision variables are integers, respectively. In this book we provide a

Ephrem is known for a theology that relies heavily on symbol and for a keen awareness of Jewish exegetical traditions. Yet he is also our earliest source for the reception of Nicaea among Syriac-speaking Christians. It is in his eighty-seven Hymns on Faith - the longest extant piece of early Syriac literature - that he develops his arguments against subordinationist christologies most fully.

These hymns, most likely delivered orally and compiled after the author's death, were composed in Nisibis and Edessa between the 350s and 373. They reveal an author conversant with Christological debates further to the west, but responding in a uniquely Syriac idiom. As such, they form an essential source for reconstructing the development of pro-Nicene thought in the eastern Mediterranean.
