Utopian thought and experimental approaches to societal organization have been rare in the last decades of planning and politics. Instead, there is a widespread belief in ecological modernization, that sustainable societies can be created within the

frame of the current global capitalist world order by taking small steps such as eco-labeling, urban densification, and recycling. However, in the context of the current crisis in which resource depletion, climate change, uneven development, and economic instability

are seen as interlinked, this belief is increasingly being questioned and alternative developmental paths sought. This collection demonstrates how utopian thought can be used in a contemporary context, as critique and in exploring desired futures. The book

includes theoretical perspectives on changing global socio-environmental relationships and political struggles for alternative development paths, and analyzes micro-level practices in co-housing, alternative energy provision, use of green space, transportation, co-

production of urban space, peer-to-peer production and consumption, and alternative economies. It contributes research perspectives on contemporary green utopian practices and strategies, combining theoretical and empirical analyses to spark discussions of

possible futures.

Colour, Rudolf Steiner shows how colour affects us in many areas of life, including our health, our sense of well-being, and our feelings. Distinguishing between 'image' and 'lustre' colours, he

lays the foundation, based on his spiritual-scientific research, for a practical technique of working with colour that leads to a new direction in artistic creativity. His many penetrating remarks

on some of the great painters of the past are supplemented by a deep concern to see a cultural, spiritual renewal emerge in the present time. 'If you realize', he states, 'that art always has a relation to the

spirit, you will understand that both in creating and appreciating it, art is something through which one enters the spiritual world.' This volume is the most comprehensive compilation of

Rudolf Steiner's insights into the nature of colour, painting and artistic creation. It is an invaluable source of reference and study not only for artists and therapists but for anyone interested in gaining an

Immediately following the founding of the University Consortium for Geographic Information Science (UCGIS), the group identified in a Research Agenda the topics that represented major

challenges to the GIS research community. The first chapter of this book delivers an introduction to the agenda and to the collective guidance that the agenda provides to researchers. Chapters 2-10

discuss nine original research challenges. Chapters 11-14 provide the basis of the agenda's four "Emerging Themes." Each chapter, written by researchers involved in the conception of

the topics, discusses basic research elements, the UCGIS approach, the need for the National research agenda, contributions to knowledge and society, and offers a complete set of references.

The final section draws general conclusions about the UCGIS approach and the defined research challenges. Understanding the flexibility and limits of behaviour is essential to improving both
