

Case Problems In Finance 11th Edition

Nobel Prize-winning economist explains why we need to reclaim finance for the common good The reputation of the financial industry could hardly be worse than it is today in the painful aftermath of the 2008 financial crisis. New York Times best-selling economist Robert Shiller is no apologist for the sins of finance—he is probably the only person to have predicted both the stock market bubble of 2000 and the real estate bubble that led up to the subprime mortgage meltdown. But in this important and timely book, Shiller argues that, rather than condemning finance, we need to reclaim it for the common good. He makes a powerful case for recognizing that finance, far from being a parasite on society, is one of the most powerful tools we have for solving our common problems and increasing the general well-being. We need more financial innovation—not less—and finance should play a larger role in helping society achieve its goals. Challenging the public and its leaders to rethink finance and its role in society, Shiller argues that finance should be defined not merely as the manipulation of money or the management of risk but as the stewardship of society’s assets. He explains how people in financial careers—from CEO, investment manager, and banker to insurer, lawyer, and regulator—can and do manage, protect, and increase these assets. He describes how finance has historically contributed to the good of society through inventions such as insurance, mortgages, savings accounts, and pensions, and argues that we need to envision new ways to rechannel financial creativity to benefit society as a whole. Ultimately, Shiller shows how society can once again harness the power of finance for the greater good.

Hardbound. The Handbook of Finance is a primary reference work for financial economics and financial modeling students, faculty and practitioners. The expository treatments are suitable for masters and PhD students, with discussions leading from first principles to current research, with reference to important research works in the area. The Handbook is intended to be a synopsis of the current state of various aspects of the theory of financial economics and its application to important financial problems. The coverage consists of thirty-three chapters written by leading experts in the field. The contributions are in two broad categories: capital markets and corporate finance.

This monograph is a sequel to Brownian Motion and Stochastic Calculus by the same authors. Within the context of Brownian-motion- driven asset prices, it develops contingent claim pricing and optimal consumption/investment in both complete and incomplete markets. The latter topic is extended to a study of equilibrium, providing conditions for the existence and uniqueness of market prices which support trading by several heterogeneous agents. Although much of the incomplete-market material is available in research papers, these topics are treated for the first time in a unified manner. The book contains an extensive set of references and notes describing the field, including topics not treated in the text. This monograph should be of interest to researchers wishing to see advanced mathematics applied to finance. The material on optimal consumption and investment, leading to equilibrium, is addressed to the theoretical finance community. The chapters on contingent claim valuation present techniques of practical importance, especially for pricing exotic options. Also available by Ioannis Karatzas and Steven E. Shreve, Brownian Motion and Stochastic Calculus, Second Edition, Springer-Verlag New York, Inc., 1991, 470 pp., ISBN 0-387- 97655-8.

In this extensively updated third edition, Hans Visser explores the ideas and concepts that drive and shape Islamic finance. This incisive book reviews the products, institutions and markets offered by Islamic finance in the modern marketplace, offering a critical discussion of the ways in which fiscal and monetary policy can be adapted to Islamic financial institutions. Visser offers new directions for economics and finance students, as well as students of Islamic finance and Islam studies more broadly.

The book analyzes prospects for U.S. trade and investment growth in Latin America in the context of President George Bush's proposed Enterprise for the America's Initiative (EAI) and ongoing negotiations toward a free trade agreement with Mexico. It investigates the causes of Latin America's economic downturn in the 1980s, the current adjustment efforts being made across that continent, and the revision of U.S. economic policy toward the nations of that region. The book evaluates the commercial potential of individual Latin economies using achieved adjustment to date as its central criteria.

Corporate Reorganisation Law argues that corporate reorganisation law is seen by market participants as a tool they can mobilise and adapt according to practices, logics, and identities in the of the financial and non-financial corporate markets. Thus changes in market practice, in the participants in the process, or in how the participants view their objectives, can significantly change the ways in which corporate reorganisation law is mobilised and adapted, even if the law has not undergone any reform. This book argues that corporate reorganisation law cannot be evaluated using a theoretical model in isolation from the wider institutional context in which corporate reorganisation law is mobilised and adapted by the participants to the process. In establishing the new methodology, the book undertakes a detailed analysis of six key changes in market practice, logic and identities in the financial and non-financial corporate fields. A comparative US/UK approach is adopted in analysing both the process of institutional change and the implications for law. This provides a fascinating lens through which to see how different institutional environments in the financial and non-financial markets in different jurisdictions are drawing together, and interacting with very different legal systems which were adapted to the distinct, original institutional environments in which they were developed. From this analysis important lessons for legal harmonisation efforts in Europe and in non-European jurisdictions are drawn out. The work emphasises the need to look at formal legal rules in combination with other, non-legal and legal institutions and argues that current reform debates in both the US and UK have suffered because scholars, practitioners, and policy makers have not started their evaluation of the case for reform by placing corporate reorganisation law in this wider institutional context. The book aims to fill this gap, and to provide a methodological approach for the future.

This book draws readers' attention to the financial aspects of daily life at a corporation by combining a robust mathematical setting and the explanation and derivation of the most popular models of the firm. Intended for third-year undergraduate students of business finance, quantitative finance, and financial mathematics, as well as first-year postgraduate students, it is based on the twin pillars of theory and analytics, which merge in a way that makes it easy for students to understand the exact meaning of the concepts and their representation and applicability in real-world contexts. Examples are given throughout the chapters in order to clarify the most intricate aspects; where needed, there are appendices at the end of chapters, offering additional mathematical insights into specific topics. Due to the recent growth in knowledge demand in the private sector, practitioners can also profit from the book as a bridge-builder between university and industry. Lastly, the book provides useful information for managers who want to deepen their understanding of risk management and come to recognize what may have been lacking in their own systems.
