Microsoft Data Mining approaches data mining from the particular perspective of IT professionals using Microsoft data management technologies. The author explains the new data mining capabilities in Microsoft's SQL Server 2000 database, Commerce Server, and other products, details the Microsoft OLE DB for Data Mining standard, and gives readers best practices for using all of them. The book bridges the previously specialized field of data mining with the new technologies and methods that are quickly making it an important mainstream tool for companies of all sizes. Data mining refers to a set of technologies and techniques by which IT professionals search large databases of information (such as those contained by SQL Server) for patterns and trends. Traditionally important in finance, telecommunication, and other information-intensive fields, data mining increasingly helps companies better understand and serve their customers by revealing buying patterns and related interests. It is becoming a foundation for e-commerce and knowledge management. Unique book on a hot data management topic Part of Digital Press's SQL Server and data mining clusters Author is an expert on both traditional and Microsoft data mining technologies

This is a book of hypothetical cases written to give students real examples of key finance concepts. Each case is 3-4 pages in length, and concludes with questions and problems that walk students through calculations and critical analysis of the case to help them make business decisions.

This book blends classroom training with actual practice. It provides case studies for the students of Management, Commerce, Chartered Accountancy, and Cost and Work Accountancy. It contains case studies pertaining to Indian conditions and their suggested solutions. The book also consists of numerical problems and self-study exercises.

With flair and an originality of approach, Crundwell brings his considerable experience to bear on this crucial topic. Uniquely, this book discusses the technical and financial aspects of decision-making in engineering and demonstrates these through case studies. It's a hugely important matter as, of course, engineering solutions and financial decisions are intimately tied together. The best engineers combine the technical and financial cases in determining new solutions to opportunities, challenges and problems. To get your project approved, no matter the size of it, the financial case must be clear and compelling. This book provides a framework for engineers and scientists to undertake financial evaluations and assessments of engineering or production projects.

New Perspectives on Supply and Distribution Chain Financing: Case Studies from China and Europe

This book aims to fill the literature gap on digital instruments and FinTech in enhancing green finance. Technological innovation can increase transparency, accountability, and speed, decentralize the financial system, improve risk management, increase competition, lower costs, improve efficiency, increase cross-sectoral collaboration and integration, and scale up green finance. Artificial intelligence (AI), distributed ledger technologies (DLT) or blockchain, peer-to-peer lending platforms, big data, Internet-based and mobile-based payment platforms, Internet of Things (IoT), matchmaking platforms including crowdlending, tokenizing green assets are potential means to scale up the green finance for achieving the SDGs. The COVID-19 pandemic, the economic downturns, and the uncertainties shrank the new investments in renewable energy projects globally. Low investment in renewable energy projects could threaten the expansion of green energy needed to provide energy security and meet SDG7 and SDG13. Investments in renewable energy projects are scarce because of several risks and a low rate of return. Although several new green financing solutions such as green bonds, green banks, green credit guarantee, carbon taxation, carbon trade, village funds, and community trust funds have been established in different countries, these are insufficient, and alternative ways to finance projects are required. The book provides several high-quality studies on utilizing digitalization, FinTech, financial innovations, and other new technologies to fill the finance gap of green projects to meet the SDG goals. The chapters are written by scholars in diverse countries and regions and include practical policy recommendations.

High-Performance Computing (HPC) delivers higher computational performance to solve problems in science, engineering and finance. There are various HPC resources available for different needs, ranging from cloud computing- that can be used without much expertise and expense - to more tailored hardware, such as Field-Programmable Gate Arrays (FPGAs) or D-Wave's quantum computer systems. High-Performance Computing in Finance is the first book that provides a state-of-the-art introduction to HPC for finance, capturing both academically and practically relevant problems.

This book exemplifies activities undertaken by selected enterprises towards resolving significant problems related to green controlling and finance. It presents how the analysed enterprises employ (or may employ) green controlling for coordination of initiatives in environmental and social dimensions. The authors focused primarily on the financial angle of the solutions regarding environmental and social aspects within the scope of corporate strategy, value creation, financial planning, budgeting, indicator analysis, reporting, cost management, investment appraisal, risk analysis and estimation of capital cost. The analyses performed enabled the researchers to prove that elements of green controlling connected with finance are present in the discussed enterprises and may serve as examples of good practices for other business entities striving to increase enterprise value in the long run.

Bridge the theory and practice behind fintech with this textbook which includes up-to-date case studies, clear definitions of new technologies and academic frameworks.

**Drawing upon research and practitioner narratives from management, leadership, organizational studies, entrepreneurship and sustainable business domains, this book explores the many pathways that enable emerging countries to transform knowledge into action to achieve economic and sustainable development. The authors take a holistic approach to 'transforming knowledge' that goes beyond the mere 'application of knowledge' to include the assimilation, adaptation, and contextualization of knowledge to suit the unique contexts, needs and conditions existing in emerging countries. They then presents success stories and case studies comprising innovative solutions for emerging economies that practitioners can utilize. Current research in management is highlighted by bringing together academics, practitioners, policy-makers and interest groups from diverse regions and perspectives.**

**Globalization no longer means simply finding low-cost countries for sourcing, but has involved to include the opportunity for growth in Asia's emerging domestic markets, specifically China. This development results in extended, truly global supply chains and thus places a higher pressure on working capital. Therefore, several definitions of Supply Chain Management already encompass financial aspects and demand a more integrated consideration of material, information, and financial flows within supply chains. However, more precise theory on "Supply Chain Financing" is understudied and initial implementation of related solutions in industry has only gained momentum during and after the economic and financial crises of 2008 and 2009. In contrast to traditional financial instruments for supply chains – for instance trade finance products which have been around for more than a century – Supply Chain Financing leverages larger and influential members of supply chains. These firms might, for instance, provide easier and cheaper access to financing for smaller supply chain members supporting their profitability through renegotiated and reduced purchasing prices. Echoing recent research results on supply chain risk management, other firms may prefer to take on a supply chain perspective and work on creating agile and resilient supply chains. In this context, Supply Chain Financing can be employed to ensure liquidity for crucial upstream and downstream supply chain partners thereby allowing a firm to effectively control risk while making the most of remaining growth opportunities in emerging markets like China!**

**This is a self-contained text on the logic and institutions of project finance, supplemented by a series of project finance case studies illustrating applications in different economic environments, across different jurisdictions and at different stages of development. It will introduce an analytical framework drawing on applied institutional economics that includes and concentrates primarily on an analysis of the institutional logic behind generic project finance arrangements. The application of the institutional framework will be demonstrated with project cases from Hong Kong, Thailand, India, Europe and Azerbaijan – each at different stages of development. While each project case will have a general theme and will highlight aspects of interest to built environment professionals, it will primarily be used to illustrate one or more specific PF/PFI principle.**

**This book presents new research on innovative financial instruments and approaches available to implement nature-based solutions (NBS) at various scales and in different contexts. Despite knowledge of the multiple benefits NBS provide, a key barrier to their wide-spread adoption is a lack of knowledge over their financing, in particular, who should pay for an NBS and how it can be financed. The book explores a variety of public, private, and blended finance models and their applicability in developing NBS across terrestrial and marine ecosystems, involving multiple stakeholders, and in jurisdictions of varying climates and income levels. Furthermore, the book provides case studies of the innovative financing of NBS with best practices identified. This book is of interest to environmental planners, resource conservation managers, policymakers, international companies and organizations, environmental NGOs, researchers, and graduate and undergraduate students interested in NBS.**

The internet is dramatically transforming the way business is done, particularly for financial services. Digital Finance takes a thoughtful look at how the industry is evolving, and it explains how to integrate concepts of digital finance into existing traditional finance platforms. This book explores what successful companies are doing to maximize their opportunities in this context and offers suggestions on how to introduce digital finance into a firm 's structure. Specific strategies for a digital future are presented, alongside numerous case studies that explore key attributes of success. In recognition of the rapidly evolving nature of finance today, Digital Finance is accompanied by a website maintained by the author (PerryBeaumont.com), as well as links to other content with insightful articles, analyses, and opinions. For both practitioners and students of finance, Digital Finance provides a rich context for a better understanding of the landscape of finance today, and lays the foundation for us to process and create the financial innovations of tomorrow.

This book links the theory of finance to the decisions related to various aspects of the financial management of an organisation. In order to provide the reader with a better understanding of the concept of finance, a theoretical guide to related terminology is included here. The case studies brought together require students to look deep into the concepts of finance in order to solve the problems and issues they present. The case studies here focus on important concepts of finance which help students to relate the concept with decision-making processes.

There are many misconceptions and concerns regarding Islamic societies and how Muslim countries have failed to come up with their own localised solutions to socio-economic problems in dealing with poverty alleviation and societal development. This book explores why there is so much disconnect between spirituality and enterprise development in the world today, and how a part of the Islamic world, in fact located in Pakistan, can be part of the solution rather than being central to the problem. This book builds upon Ronnie Lessem and Alexander Schieffer 's theory of 'integral dynamics ' which works through a fourfold rhythm of the GENE. Set against a mono-cultural perspective, the authors highlight the ever-increasing and deepening divide between Western and Islamic cultures. Through the course of the book, the authors use the transformational GENE (Grounding, Emergence, Navigation, Effect) rhythm developed by Lessem and Schieffer to take readers through the 4C (Call, Context, Co-creation and Contribution) process, articulated to CAREing-4-Society. They ground their call in Akhuwat 's community of Akhuwateers (donors, beneficiaries, borrowers, volunteers and replicators), to explore alternative models of spiritually based finance through an emerging SOUL-idity paradigm. Furthermore, through these models and Akhuwat 's CARE (Community, Awareness, Research, Embodiment) process, they put forward that encouraging community activism, raising awareness around Islamic practices of Qard-e-Hasan, institutionalising their innovative research, and finally transforming and educating the community, will provide an alternative to microfinance for poverty alleviation. Showcasing an unconventional spiritual-financial solution, deeply immersed in spirituality and infused with local moral values and traditions, this book demonstrates how poverty can be alleviated in countries around the world, specifically, in developing Muslim countries.

It has been decades since many business schools outside India adopted the case study methodology for teaching almost all branches of management studies. This trend has been seen in India, too, where top management institutes have implemented the case study-based methodology as an important pedagogical tool in business education. The major issue in India, however, is a severe shortage of Indian case studies through which business schools can provide industry insights to students. This volume fills that gap. It has twenty Indian cases related to different aspects of business management. The cases cover some of the prominent disciplines of management like marketing, finance, human resource management, strategy management, operations management, accounting, and mergers and acquisitions. These cases best serve the purpose of adoption of 'case methodology' in classroom teaching or online lecture sessions for the faculty and students of business management.

Case Studies in Islamic Banking and Finance is a pioneering resource that provides practical insights into the real world of Islamic financial transactions, and illustrates the complexities of this rapidly growing mode of modern finance. Based around 12 individual cases, the book stimulates discussion and develops the reader's understanding of Islamic finance by contrasting the theoretical concepts discussed in the author's companion text Introduction to Islamic Banking and Finance with practical real world situations. The cases cover core Islamic banking and finance topics including the Ijara, Mudaraba and Musharaka contracts; Islamic mortgages for home finance; leverage; and issues involved in opening an Islamic bank. Financial statement analysis for Islamic banks, the implications for fund management for equity investing and the impact of loan defaults on Islamic and conventional banks are also included. Each chapter concludes with a set of questions designed to test the reader's understanding of each case, with suggested solutions at the end of the book. This book is a must have resource for those wishing to apply their understanding of this complex subject and is an essential read for anyone seeking practical examples of how to apply the concepts in a real world environment.

Aswath Damodaran, distinguished author, Professor of Finance, and David Margolis, Teaching Fellow at the NYU Stern School of Business, have delivered the newest edition of Applied Corporate Finance. This readable text provides the practical advice students and practitioners need rather than a sole concentration on debate theory, assumptions, or models. Like no other text of its kind, Applied Corporate Finance, 4th Edition applies corporate finance to real companies. It now contains six real-world core companies to study and follow. Business decisions are classified for students into three groups: investment, financing, and dividend decisions.

"The benefits Carrefour achieved have been substantially in excess of predictions. The Shared Service accounting centers enabled streamlined processes, lowered costs, and introduced standard processes, a standard system, and standard data for a global company. The new infrastructure can support rapid expansion and can add new stores with the flip of a switch. From a systems point of view, Carrefour now has a 'factory' in place to deliver high-efficiency systems, tools, processes, and training." --From Chapter 9, Implementation and Operational Imperatives for ERP "The benefits of efficient information delivery are demonstrated by the results of one of the world's largest mySAP.com implementations. Siemens achieved a twenty-five percent cost reduction through streamlined information delivery and improved access to financial information. It also enhanced its reporting capabilities from seventy percent to nearly 100 percent through increased intranet availability." --From Chapter 3, Financial and Management Reporting Research shows that high-performance businesses and governments use finance technology as one of the capabilities to help executives make better decisions for resource allocation, while at the same time increasing productivity. CFO Insights: Enabling High Performance through Leading Practices for Finance ERP includes a number of case studies and lessons learned from Accenture clients across a variety of industries that have implemented, upgraded, and operated Oracle/PeopleSoft and SAP. Each case study highlights vital thoughts, benefits, and considerations and provides relevant guidance as one proceeds with an ERP on the journey toward high performance.

Case Problems in Finance is a Harvard case course presenting real business situations that pose debatable alternative courses of action. The cases contain problems that can be narrowed but not always settled by the usual techniques of financial analysis. It will teach students to discover ways of thinking that are productive in handling different types of managerial problems intelligently. The cases are grouped by major topics: financial analysis and forecasting, cost of capital, working capital management, capital budgeting, dividend policy, debt policy, financial execution, and mergers and restructuring.

A better way to value the profitability and risk of R&D projects New technology and R&D initiatives affect companies in both the service and manufacturing sector. It's estimated that half a trillion dollars is spent worldwide each year on such efforts. Technology Valuation Solutions + website offers a methodology along with illustrative cases for valuing the profitability and risk of R&D projects. A companion to Boer's earlier work, The Valuation of Technology (978-0-471-31638-1), this book provides additional material that will help readers assess a wide variety of projects and business scenarios. In addition to the in-depth case studies, this book includes a website featuring valuation templates that readers can customize for their own individual needs.

The Trade and Receivables Finance Companion: A Collection of Case Studies and Solutions is based on the author's personal experience gained through more than 40 years in the field of trade finance. This Companion applies the techniques described in his first volume, Trade and Receivables Finance: A Practical Guide to Risk Evaluation and Structuring to an extensive range of international trade scenarios. Practical solutions are discussed and presented through a specially selected collection of more than 20 case studies. These books provide an unrivalled and highly practical set of manuals for the trade and receivables financier. The reader is taken on a journey from the structuring of trade products including collections, import and export letters of credit, back to back credits, guarantees and standby credits to fully and partially structured financing solutions for the importer, manufacturer, distributor, middle-party and exporter. Each funding technique provides a compelling alternative to an overdraft. The case studies include the risk assessment and financing of open account payables, stock and receivables transactions and the evaluation and use of credit insurance as a supporting tool. The structuring of commodity finance across the trade cycle, to include warehousing, and call-off is also described. Many of the chapters contain a summary 'keynote' overview and comprehensive 'deal sheet' extracts of the chosen solution detailing facility and operational requirements.
