The proceedings of  
the 9th conference  
on "Finite Volumes  
for Complex  
Applications"  
(Bergen, June 2020)  
are structured in two  
volumes. The first  
volume collects the

focused invited papers, as well as the reviewed contributions from internationally leading researchers in the field of analysis of finite volume and related methods. Topics covered include convergence and

stability analysis, as well as investigations of these methods from the point of view of compatibility with physical principles. Altogether, a rather comprehensive overview is given on the state of the art in the field. The

properties of the methods considered in the conference give them distinguished advantages for a number of applications. These include fluid dynamics, magnetohydrodynamics, structural analysis,

nuclear physics,

and further topics.  
The second volume  
covers reviewed  
contributions  
reporting successful  
applications of finite
