bioengineers). The book
is divided into two parts.

Access Free Casts Splints And Support Bandages

The first is designed to help the reader evaluate and understand a child with cerebral palsy. It deals with neurological control, musculoskeletal growth, and normal gait, as well as cerebral injury, growth deformities and gait pathology in children with cerebral palsy. The second section is a comprehensive overview

presents a strong

continent. Since the dawn of political independence in Africa, there has been an ongoing search for the kind of education that will create a class of principled and innovative citizens who are sensitive to and committed to the needs of the continent. When indigenous or environment-generated

knowledge forms the basis of learning in classrooms, learners are able to immediately connect their education with their lived reality.

The result is much introspection, creativity and innovation across fields, sectors and disciplines, leading to societal transformation. Drawing on several theoretical assertions,

examples from a wide range of disciplines, and experiences gathered from different continents at different points in history, the book establishes that for education to trigger the necessary transformation in Africa, it should be constructed on a strong foundation of learners' indigenous knowledge.
